OUR COMMITMENT TO THE ENVIRONMENT

Sodeca has begun a new stage of study and design of new trends in ventilation which will help to preserve the environment and to make the energy saving which so much concerns today's society.

EFFICIENT WORK

SODECA is pleased to present its new efficient, high performance "Efficient Work" fans, equipped with high-tech motors for greater energy savings. These new products exceed the requirements of the Ecodesign ErP Directive of 2009/125/CE and the (EU) regulation 327/2011 governing fans and adhere to the KYOTO goals adopted by the EU for cutting greenhouse gas emissions.

SODECA has concentrated its activity on the production of industrial fans, ventilation systems and extractors for the removal of smoke in case of fire since 1983, when it was founded.

SODECA's fans and extractors are present in all European countries and in many parts of the world, thanks to the quality of the product and the methods of research and development used.

Our quality procedures, used and certified by BUREAU VERITAS, in accordance with ISO 9001:2008, are another of the reasons which make **SODECA** one of the best and most renowned fan manufacturers in Europe.

Without a doubt, the most important factor for achieving our objectives is the human factor, the great professionals who work at your service, offering not only ventilation equipment but also solutions to any ventilation need required by our customers.

We offer you the possibility of visiting our facilities in Sant Quirze de Besora, with over 16,000² square metres of built area, where you will be able to see our fans being manufactured to the highest standards of quality, complying with the ISO and AMCA standards.

This catalogue only represents a small part of our product and services offering. Do not hesitate to contact us. We will put all our experience and our human resources at your disposal.

SODECA S.L.U. main facilities in E-08580 SANT QUIRZE DE BESORA

AXIAL AND ROOF FANS

Sodeca has specialised since its inception in the design and manufacture of fans and accessories for industrial applications.

The combination of our experience acquired over decades of working with fans and the technological contribution of our engineers in different departments has made it possible for Sodeca to become one of the largest manufacturers of industrial ventilation in the world.

Industrial applications demand the ability to adapt to the specifications of each project as well as manufacturing flexibility so as to satisfy the real needs of each client.

In order to meet this objective, Sodeca produces a range of Standard products and a range of specially manufactured products in order to build fans that adapt to the demands of our clients.

For many years we have been making a continuous investment in the development of internal processes and applications in order to manufacture and supply special industrial fans within a very short design and production period.

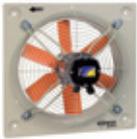

Teamwork in our engineering department, our work with universities and technological centres, as well as the close collaboration between the design departments of our external partners makes it possible to achieve innovative solutions in industrial ventilation in a short period of time.

Throughout our history, we have developed all kinds of technology in fans for industrial applications which are currently used all over the world. It is our objective to continue to invest in this sector so as to continue to be one of the most esteemed manufacturers of industrial fans in the world.

AXIAL FANS

HEP

Wall-mounted axial fans, with IP-65 motor

10

HEPT

Long-cased axial fans, with IP-65 motor

10

HC

Wall-mounted axial fans with IP-55 motor

15

HCD

Small-diameter wall-mounted axial fans

21

HCRE

Low noise wall-mounted axial fans with sheet steel impeller and external rotor motors

23

HRE

Circular axial fans with external rotor motor

23

STANDARDS COMPLIANCE

SODECA's fans and extractors comply with the following standards:

| | |
|--|---|
| QUALITY | |
| ISO 9001:2008 | Sistemas de gestión de la calidad. Requisitos. Quality management systems -- Requirements |
| TESTS | |
| ISO 5801 | Ventiladores industriales. Ensayos de comportamiento en circuitos normalizados. Industrial fans -- Performance testing using standardized airways |
| AMCA 210-07 | Ventiladores industriales. Métodos de ensayos de ventiladores y su representación de ensayos. Laboratory Methods of Testing Fans for Aerodynamic Performance Rating |
| UNE-EN ISO 5801 | Ventiladores. Dispositivos e instalaciones para el ensayo de ventiladores. |
| UNE-EN ISO 13350 | Ensayos de comportamiento de ventiladores de chorro. Industrial fans -- Performance testing of jet fans |
| ISO 13348 | Industrial fans -- Tolerances, methods of conversion and technical data presentation |
| FANS FOR HIGH TEMPERATURES | |
| EN 12101-3 | Sistemas de control de humos y calor. Parte 3: Especificaciones para aireadores extractores de humos y calor mecánicos. Smoke and heat control systems - Part 3: Specification for powered smoke and heat exhaust ventilators |
| ACOUSTICS | |
| ISO 3744 | Acústica. Determinación de los niveles de potencia acústica de fuentes de ruido a partir de la presión acústica. Método de ingeniería para condiciones de campo libre sobre un plano reflectante. Acoustics -- Determination of sound power levels of noise sources using sound pressure -- Engineering method in an essentially free field over a reflecting plane |
| BALANCE AND VIBRATIONS | |
| ISO 1940-1 | Vibraciones mecánicas. Calidad de equilibrado Mechanical vibration -- Balance quality requirements for rotors in a constant (rigid) state -- Part 1: Specification and verification of balance tolerances |
| ISO 10816-1 | Vibraciones mecánicas. Evaluación de las vibraciones de máquinas Mechanical vibration -- Evaluation of machine vibration by measurements on non-rotating parts -- Part 1: General guidelines |
| ISO 14694 | Ventiladores industriales. Especificaciones para equilibrado y niveles de vibración Industrial fans -- Specifications for balance quality and vibration levels |
| SAFETY (Declaration of EC Compliance) | |
| EN ISO 12100 | Seguridad de las máquinas. Conceptos básicos, principios generales para el diseño. Parte 1: Terminología básica, metodología. Safety of machinery -- Basic concepts, general principles for design -- Part 1: Basic terminology, methodology |
| EN ISO 12100 | Seguridad de las máquinas. Conceptos básicos, principios generales para el diseño. Parte 2: Principios técnicos. Safety of machinery -- Basic concepts, general principles for design -- Part 2: Technical principles |
| UNE EN 60204-1 | Seguridad de las máquinas. Equipo eléctrico de las máquinas. Parte 1: Requisitos generales. Safety of machinery - Electrical equipment of machines - Part 1: General requirements |
| ISO 13857 | Seguridad de máquinas. Distancias de seguridad para impedir que se alcancen zonas peligrosas con los miembros superiores e inferiores. Safety of machinery -- Safety distances to prevent danger zones being reached by upper and lower limbs |
| UNE-EN ISO 12499 | Ventiladores industriales. Seguridad mecánica en los ventiladores Industrial fans -- Mechanical safety of fans -- Guarding |

HEP HEPT

HEP: Wall-mounted axial fans, with IP65 motor
HEPT: Long-cased axial fans, with IP65 motor

HEP

HEPT

Wall-mounted axial (HEP) and long-cased (HEPT) fans, with fibreglass-reinforced plastic impeller.

Fan:

- Airflow direction from motor to impeller
- Impeller in polyamide 6 reinforced with fibre glass
- HEP: Sheet steel base plate.
- HEP: Protection guard to prevent contacts according to standard UNE-EN ISO 12499:2010
- HEPT: Sheet steel cased casing
- HEPT: Outside connecting box, IP-65 protection

Motor:

- Class F motors, with ball bearings, IP65 protection
- Single-phase 220-240V -50Hz. and three-phase 220-240/380-415V -50Hz.
- Fan working temperature: -25°C +60°C, 4-6-8 pole motors and -25°C +45°C, 2 pole motors

resin polymerised at 190°C, after alkaline degreasing with phosphate-free nanotechnology treatment.

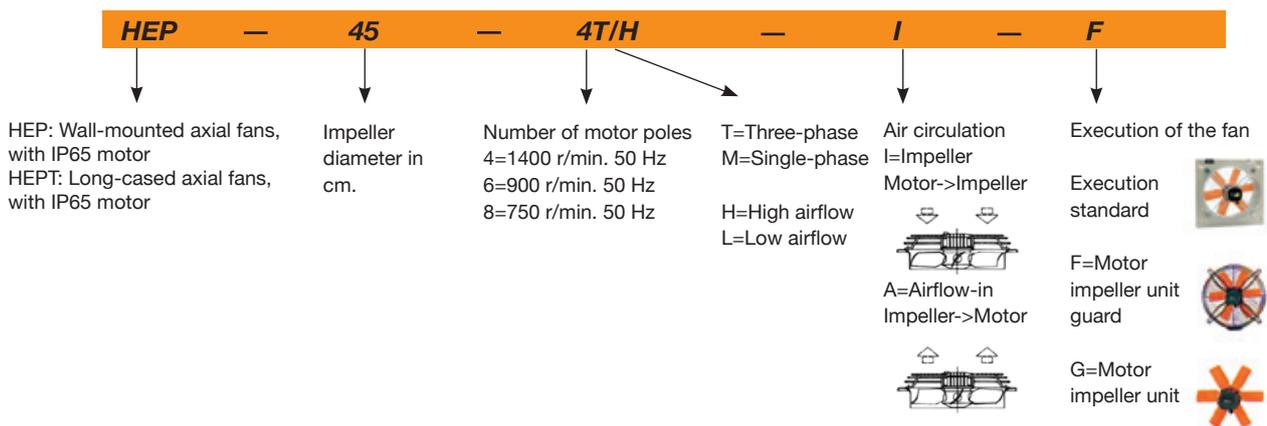

On request:

- Motor, impeller and guard unit (version F)
- Motor-impeller unit (version G)
- Airflow direction from impeller to motor
- Special windings for different voltages

Finish:

- Anticorrosive finish in polyester

Acoustic features

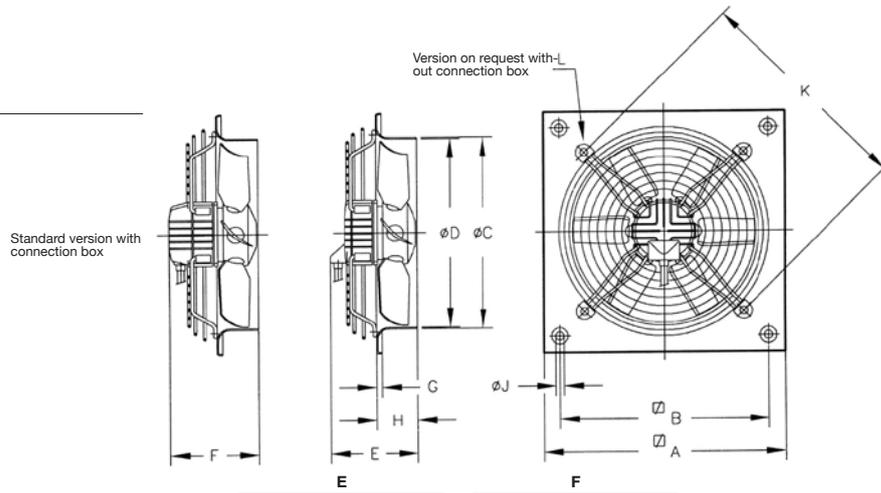

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

Characteristic curves

Q = Airflow in m³/h, m³/s and cfm.

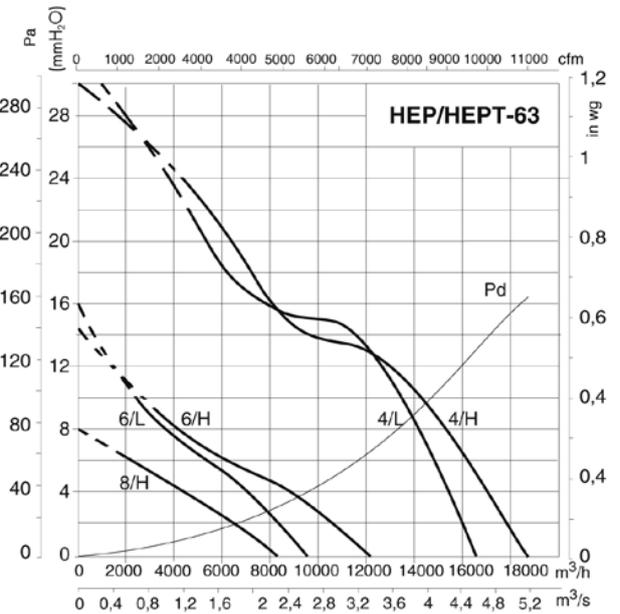

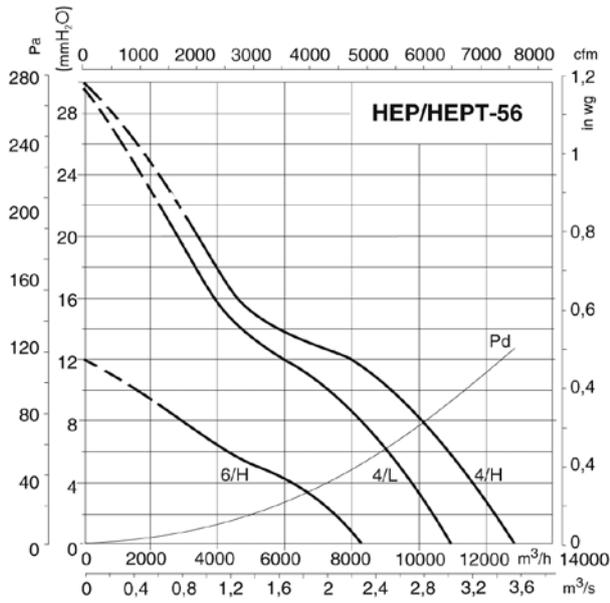

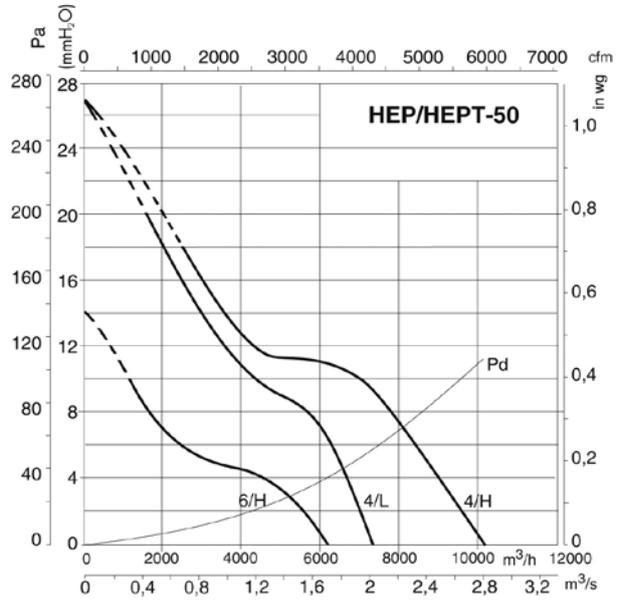

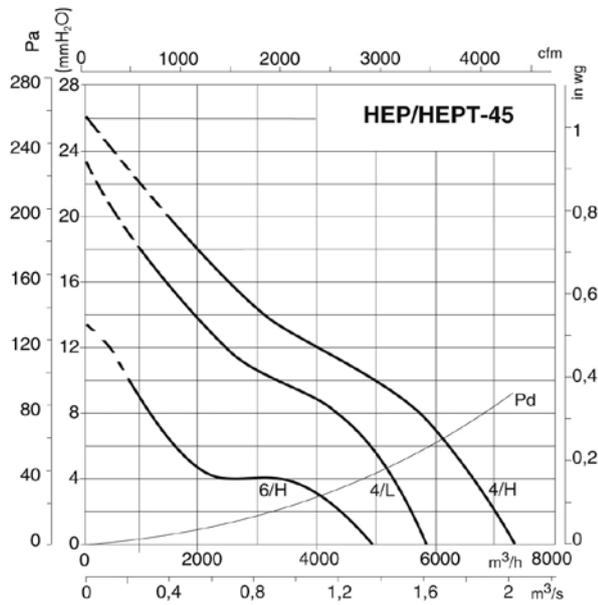

Pe = Static pressure in mmH₂O, Pa and inwg.

Characteristic curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Accessories

See accessories section.

HC

Wall-mounted axial fans, with IP55 motor

Wall-mounted axial fans with fibreglass-reinforced plastic impeller

HC

HC
71, 80,
90,100

Fan:

- Sheet steel base plate.
- Impeller in polyamide 6 reinforced with fibre glass
- Protection guard to prevent contacts according to standard UNE-EN ISO 12499:2010
- Models 71, 80, 90 and 100, the protective grille is supplied as an accessory
- Airflow direction from motor to impeller

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- Class F motors, with ball bearings and IP55 protection, except single-phase versions from size 45 to size 63, IP54 protection, one- or two-speed depending on the model
- Single-phase 230V-50Hz and Three-phase 230/400V-50Hz (up to 4kW) and 400/690V-50Hz (power over 4kW)
- Fan working temperature: -25°C + 60°C

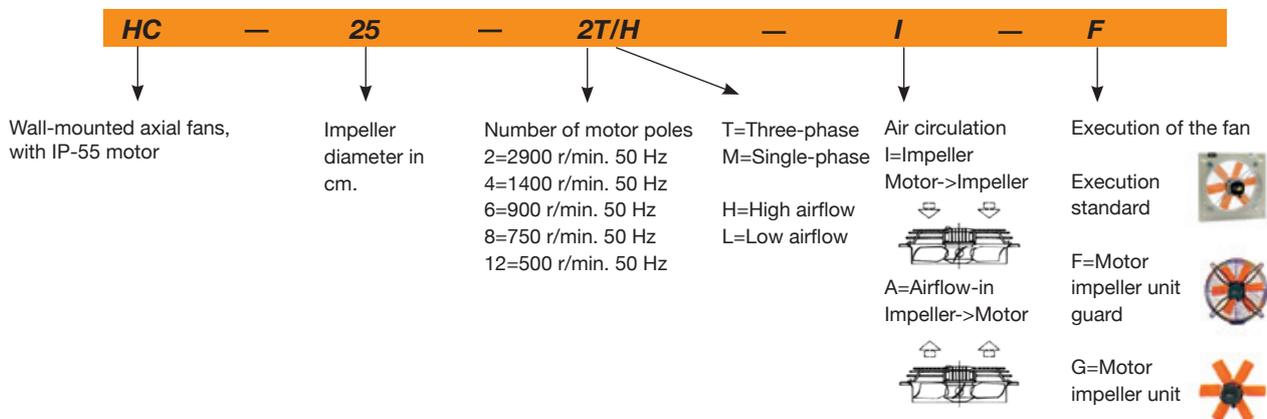

Finish:

- Anticorrosive finish in polyester resin polymerised at 190°C, after degreasing with phosphate-free nanotechnology treatment.

On request:

- Motor, impeller and guard unit (version F)
- Motor-impeller unit, version G.
- Airflow direction from impeller to motor.
- Special windings for different voltages.

Acoustic features

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

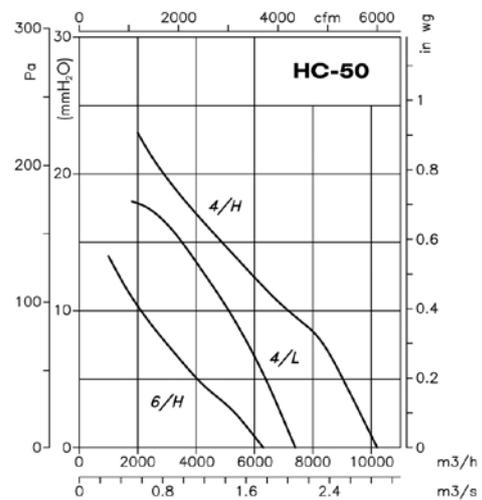

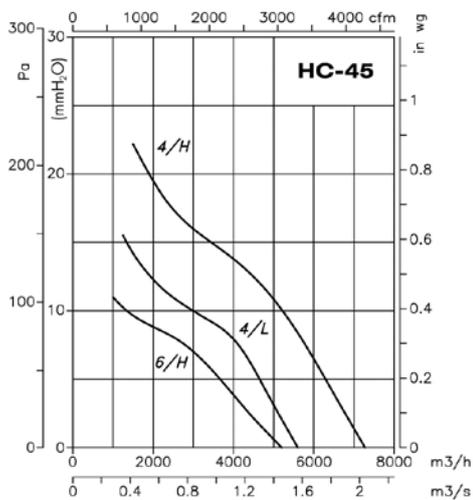

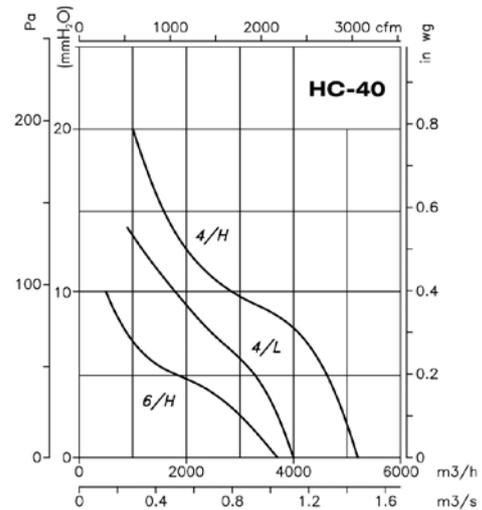

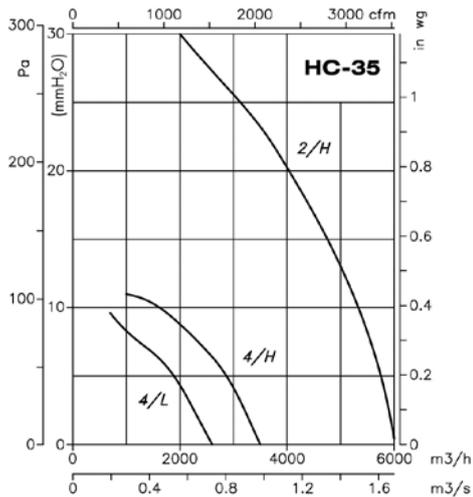

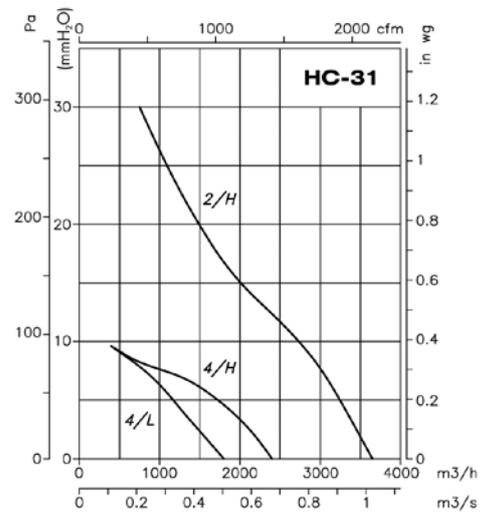

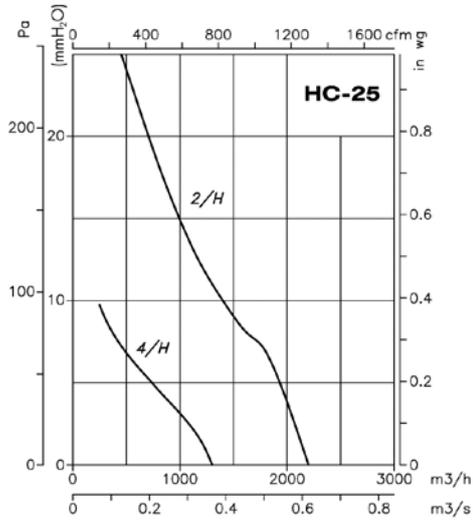

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

Small-diameter wall-mounted axial fans

Wall-mounted axial fans with aluminium sheet impellers, shading ring motors and built-in connection cable.

Fan:

- Sheet steel base plate.
- Aluminium sheet impeller
- Protection guard to prevent contacts according to standard UNE-EN ISO 12499:2010
- Airflow direction from motor to impeller

Motor:

- Class B motors with dry friction bearings, IP44 protection, except model 40 supplied with class F motor, ball bearings, IP54 protection
- Single-phase 230V.-50Hz.
- Fan working temperature: -30°C + 50°C

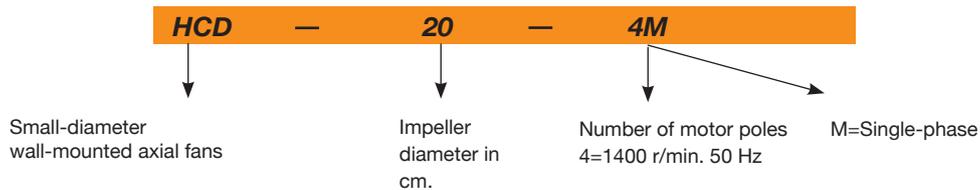

Finish:

- Anticorrosive finish in polyester resin polymerised at 190°C, after degreasing with phosphate-free nanotechnology treatment.

On request:

- Special windings for different voltages

Accessories

See accessories section.

HCH HCT

Robust wall-mounted axial or long-cased fans

Robust wall-mounted axial or long-cased fans, PL version supplied with plastic impeller and AL version supplied with aluminium impeller

Fan:

- Airflow direction from motor to impeller
- PL version impellers in polyamide 6 reinforced with fibreglass and AL version in cast aluminium. HCT-40-2T and HCT-45-2T models only in AL version
- HCH: Support ring in sheet steel
- HCT: Sheet steel long casing with external terminal board

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- IE3 efficiency motors for capacities equal to or over 7.5kW, except single-phase, 2 speed and 8 pole motors.
- Class F motors, with ball bearings and IP55 protection, except single-phase versions from size 45 to size 56, IP54 protection One- or two-speed depending on the model
- Single-phase 230V-50Hz and three-phase 230/400V-50Hz (up to 4kW) and 400/690V-50Hz (power over 4kW)
- Fan working temperature: -25°C + 50°C

Finish:

- Anticorrosive finish in polyester resin polymerised at 190°C, after alkaline degreasing with phosphate-free nanotechnology treatment.

On request:

- IE2 and IE3 efficiency motors for any power.
- Airflow direction from impeller to motor.
- 100% reversible impellers.
- Special windings for different voltages.
- ATEX certification, Category 2

Acoustic features

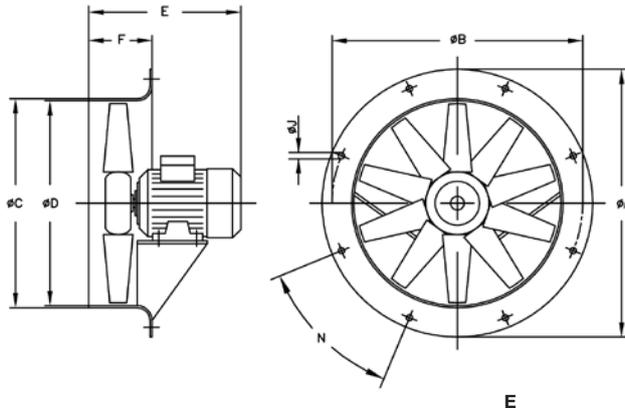

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Sound power L_w(A) spectrum in dB(A) via frequency band in Hz.

6 Poles=1000 r/min

6 Poles=1000 r/min

6 Poles=1000 r/min

8 Poles=750 r/min

8 Poles=750 r/min

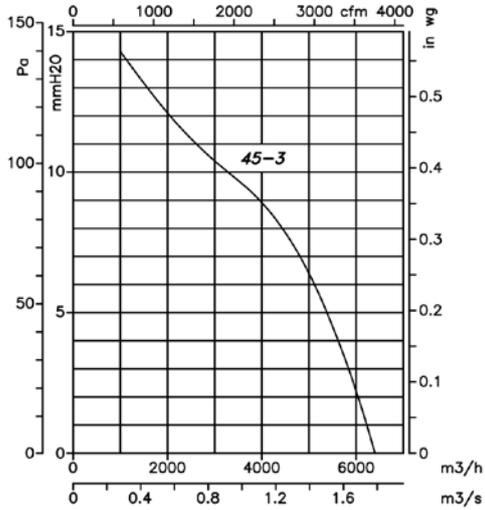

Characteristic curves

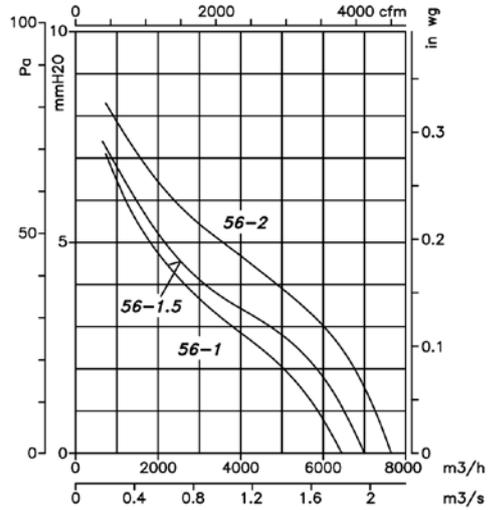

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

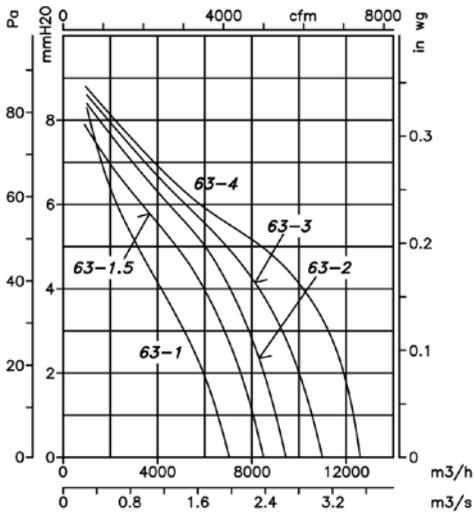

4 Poles (2-speed motor)=2/4 Poles

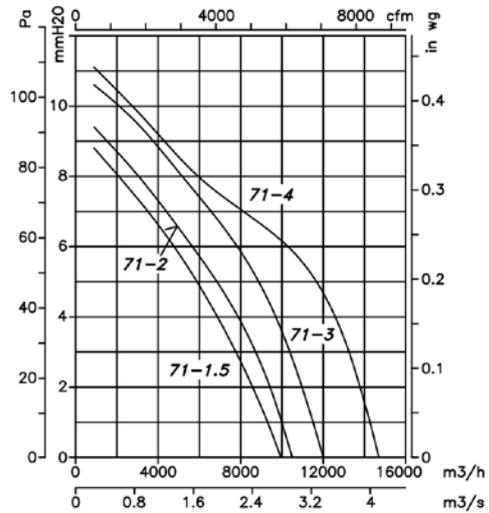

8 Poles (2-speed motor)=4/8 Poles

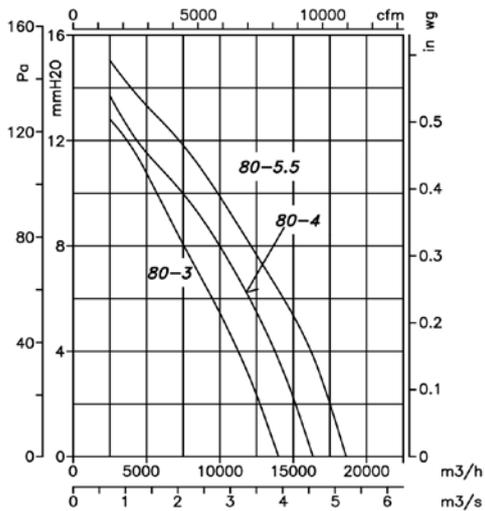

8 Poles (2-speed motor) =4/8 Poles

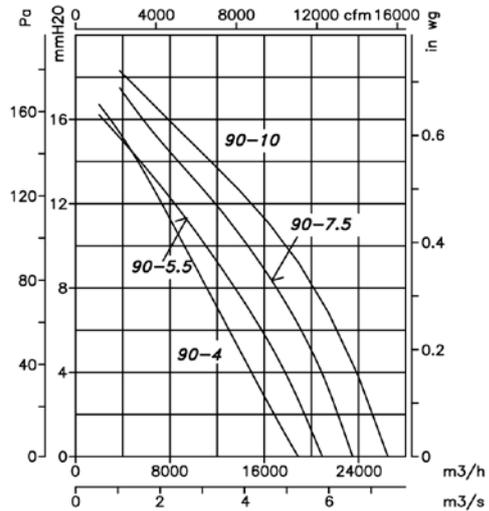

8 Poles (2-speed motor)=4/8 Poles

8 Poles (2-speed motor)=4/8 Poles

8 Poles (2-speed motor)=4/8 Poles

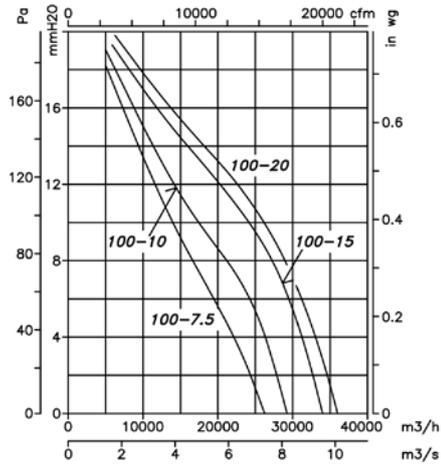

Characteristic curves

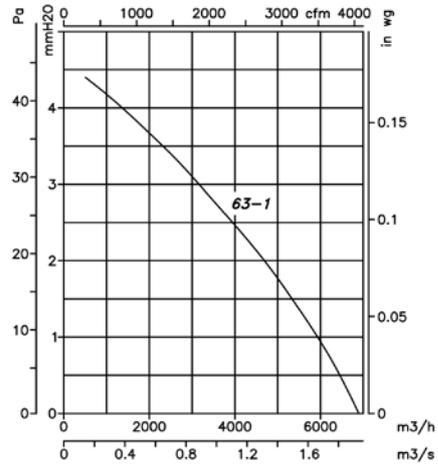

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

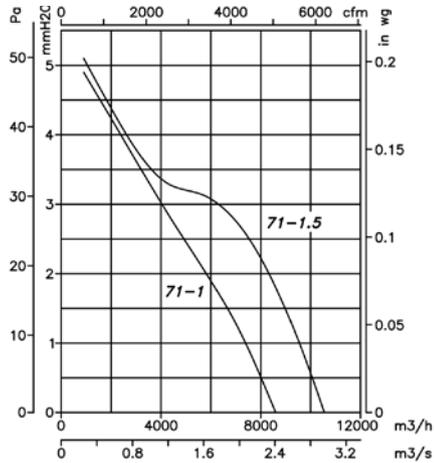

8 Poles (2-speed motor) =4/8 Poles

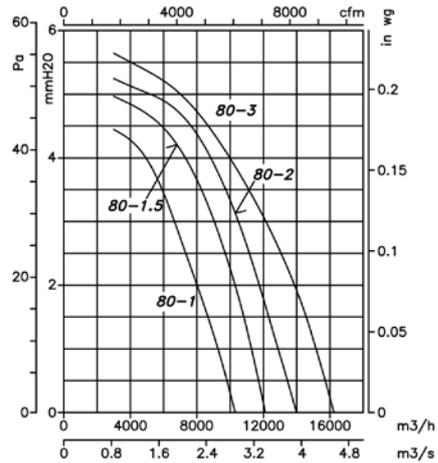

12 Poles (2-speed motor)=6/12 Poles

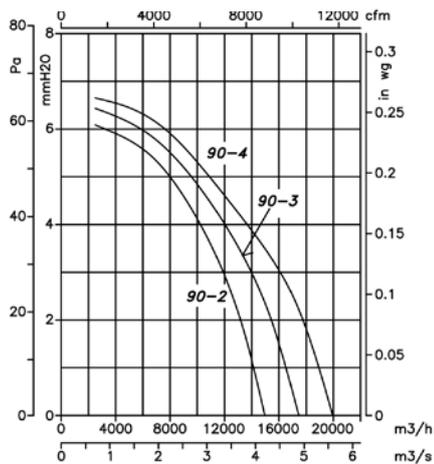

12 Poles (2-speed motor)=6/12 Poles

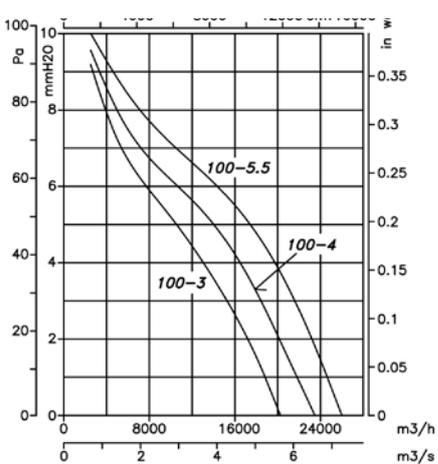

12 Poles (2-speed motor)=6/12 Poles

12 Poles (2-speed motor)=6/12 Poles

12 Poles (2-speed motor)=6/12 Poles

Accessories

See accessories section.

HFW

Hot galvanised cased fans

Cased axial fans designed with four support arms to reduce vibrations, and fitted with low energy consumption aerodynamic aluminium blade

Fan:

- Airflow direction from motor to blade.
- AL version blades in cast aluminium
- Support ring in sheet steel with double clamp and cable duct for motor power supply.
- Hot galvanised sheet steel long casing.

- Three-phase 230/400V-50Hz. (up to 4kW) and 400/690V-50Hz. (power over 4kW)
- Fan working temperature: -25°C +50°C.

Finish:

- Hot galvanised steel

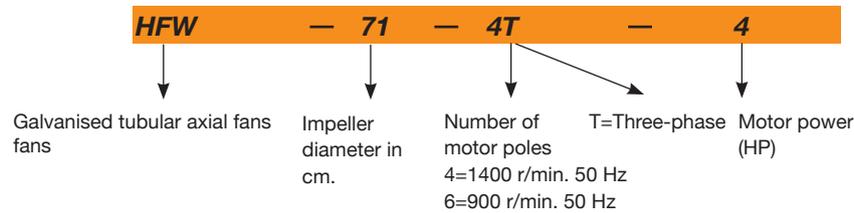

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- IE3 efficiency motors for capacities equal to or over 7.5kW, except single-phase, 2 speed and 8 pole motors
- Class F motors, with ball bearings, IP55 protection

On request:

- Airflow direction from impeller to motor.
- PL version impellers in polyamide with fibreglass.
- 100% reversible impellers.
- Special windings for different voltages.
- ATEX certification, Category 2.
- IE2 and IE3 efficiency motors for any power

Order code

Acoustic Features

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's external diameter plus the impeller's diameter, with a minimum of 1.5 m.

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

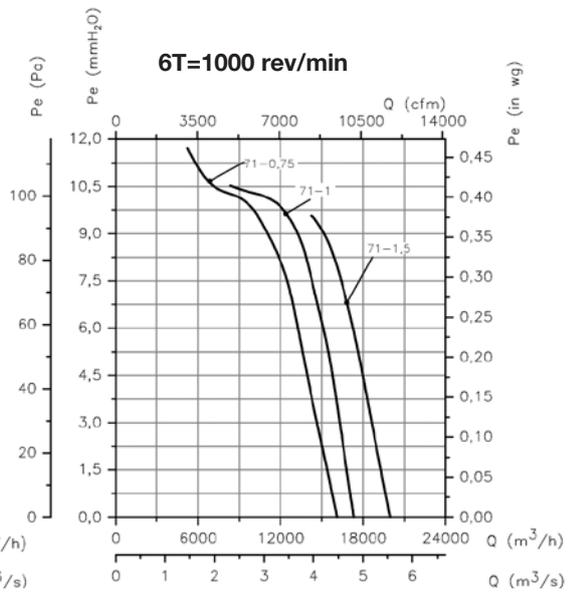

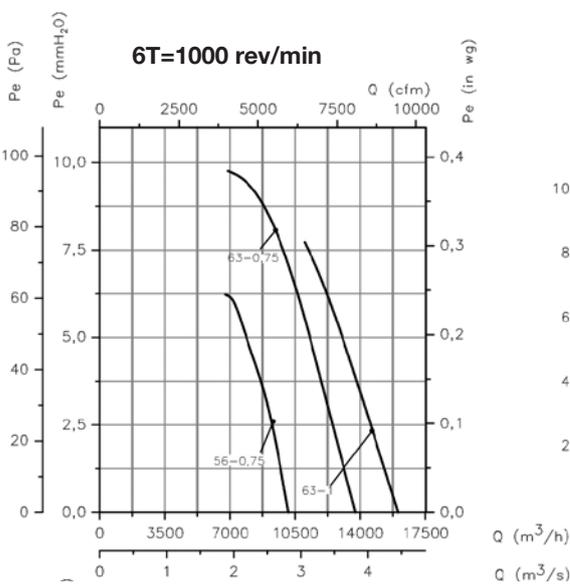

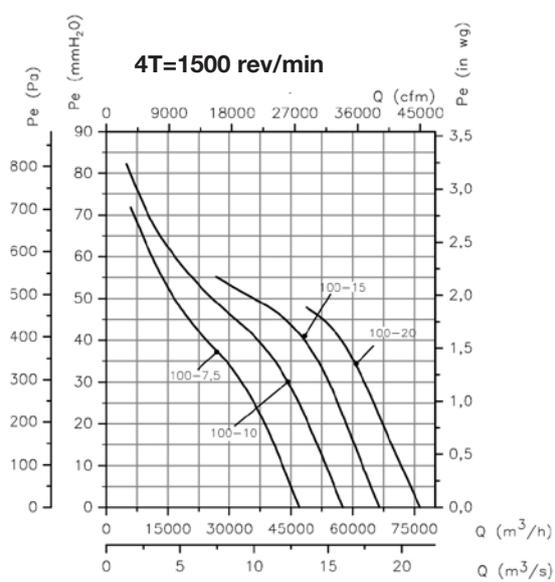

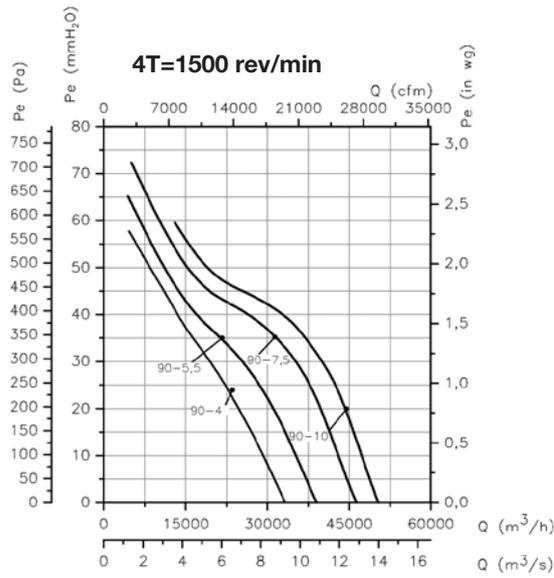

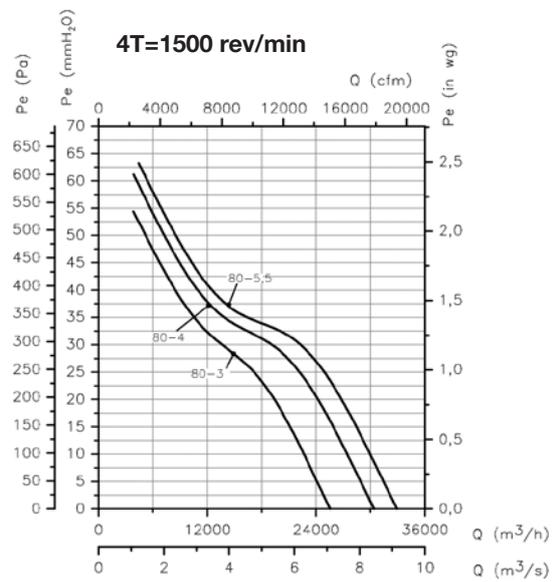

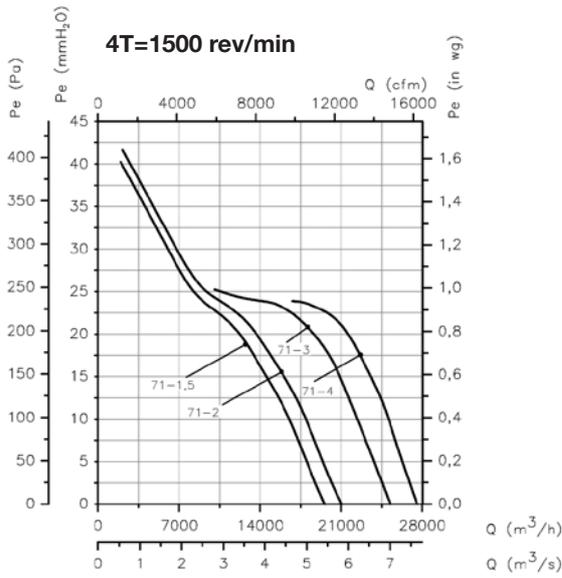

Pe = Static pressure in mmH₂O, Pa and inwg.

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

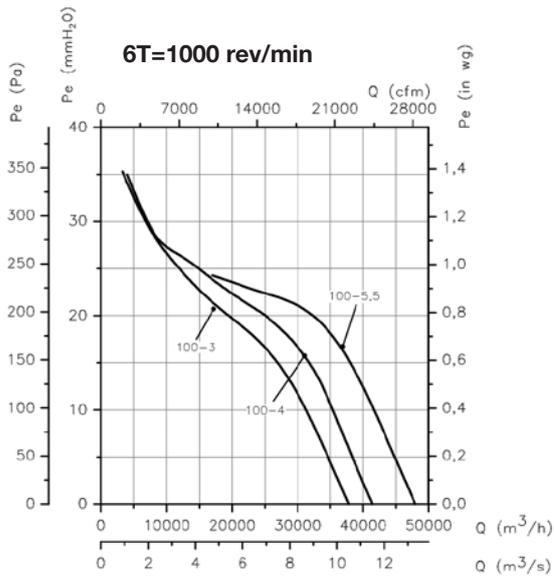

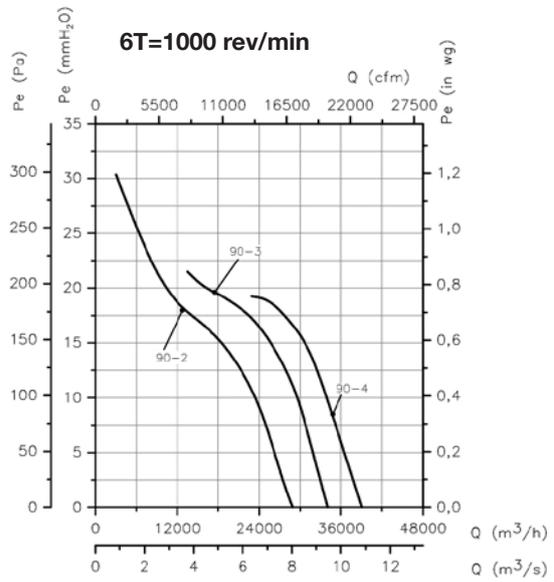

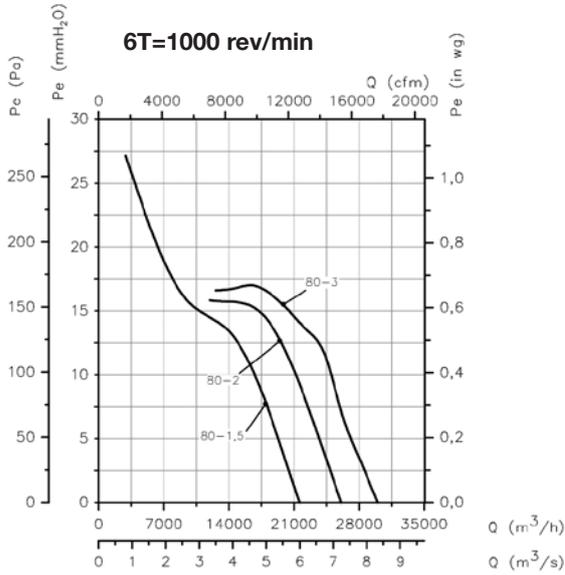

Pe = Static pressure in mmH₂O, Pa and inwg.

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Accessories

See accessories section.

CJHCH

Axial ventilation units with soundproofed box

Ventilation units with internal soundproofing, with dismantlable inspection hatches.

Fan:

- Galvanised steel structure with thermal insulation and soundproofing
- Impellers in polyamide 6 reinforced with fibre glass
- Ventilation units designed for working in both horizontal and vertical positions
- Airflow direction from motor to impeller

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- IE3 efficiency motors for capacities equal to or over 7.5kW, except single-phase, 2 speed and 8 pole motors.
- Class F motors, with ball bearings and IP55 protection, except single-phase versions from size 45 to size 56, IP54 protection. One-or two-speed depending on the model
- Single-phase 230V-50Hz and three-phase 230/400V-50Hz (up to 4kW) and 400/690V-50Hz (power over 4kW)
- Fan working temperature: -25°C + 50°C

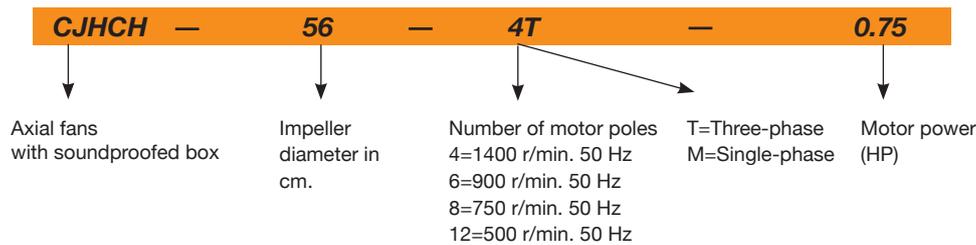

Finish:

- Anticorrosive galvanized sheet steel.

On request:

- IE2 and IE3 efficiency motors for any power.
- AL version cast aluminium impellers
- Airflow direction from impeller to motor.
- 100% reversible impellers.
- Special windings for different voltages

Order code

Acoustic features

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

Accessories

See accessories section.

HTP

Cased high-pressure axial fans

Robust cased axial high-pressure fans, especially designed for mining installations with large load losses

Fan:

- Sheet steel thick long casing
- Motor base welded to the casing
- Guidelines for high aerodynamic performance for pressure gain
- Optimum surface protection by means of high-quality steel.
- High-performance, cast aluminium impeller.
- Airflow direction from impeller to motor
- Electrical connection in outside terminal board.

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- IE3 efficiency motors for capacities equal to or over 7.5kW, except single-phase, 2 speed and 8 pole motors
- Class F motors, with ball bearings, IP-55 protection
- Three-phase 230/400V-50Hz. (up to 4kW) and 400/690V-50Hz. (power over 4kW)
- Fan working temperature: -20°C +70°C

Finish:

- High-protection, anti-corrosion steel, specially primed and high-quality paint for corrosive environments.

On request:

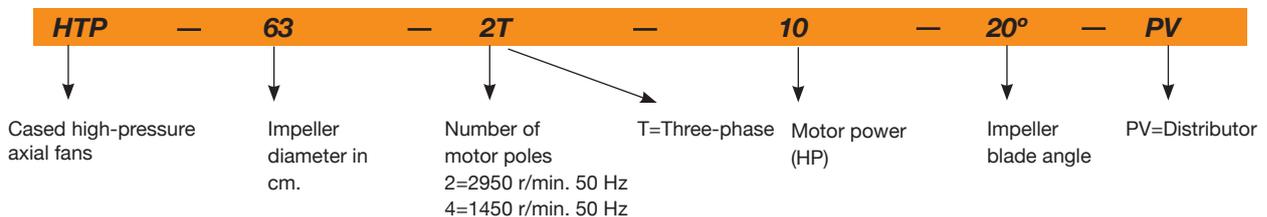

- Standardised IP-55 motors, ATEX motors and two speeds
- Made entirely from stainless steel.
- Hot-rolled galvanised steel construction
- ATEX certification, Category 2
- IE2 and IE3 efficiency motors for any power

Hélice de alta presión

Acoustic features

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

EXAMPLE OF SELECTION

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

HTP-63-4T

Initial data

- Working point:
- Airflow: 12,500 m³/h
- Load loss: 7.5 mmH₂O

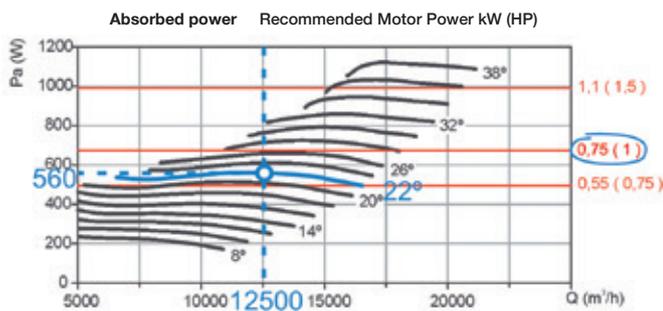

Steps for selecting equipment

On the pressure graph:

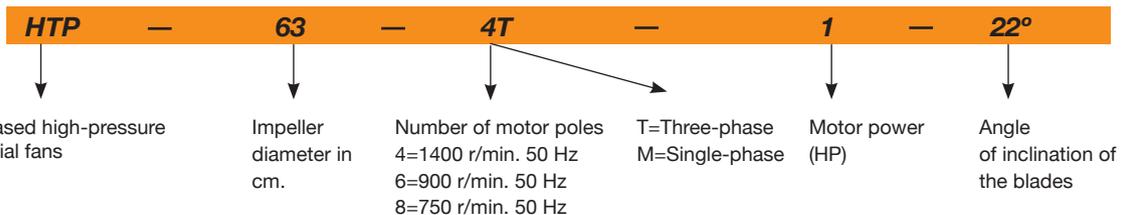

- 1 Mark the working point, defined by the airflow (12,500 m³/h) and the load loss (7.5 mmH₂O).
- 2 Select the curve of the equipment which is closest above the working point. In our case, a curve with a blade angle of 22° is obtained.

On the power graph:

- 3 Mark the working point, defined by the airflow (12,500 m³/h) and the selected blade angle (22°).
- 4 Read the absorbed power on the power axis on the left. Pa= 560 W at the working point.
- 5 Look for the straight red line which is closest to the working point above. On the right-hand side of the graph, the value of the installed motor power is obtained. In our case, this is 0.75 kW or 1 HP

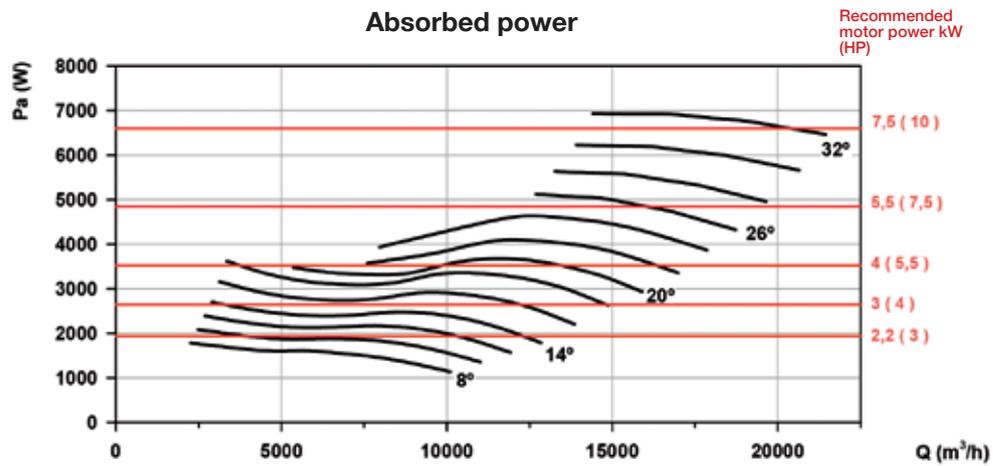

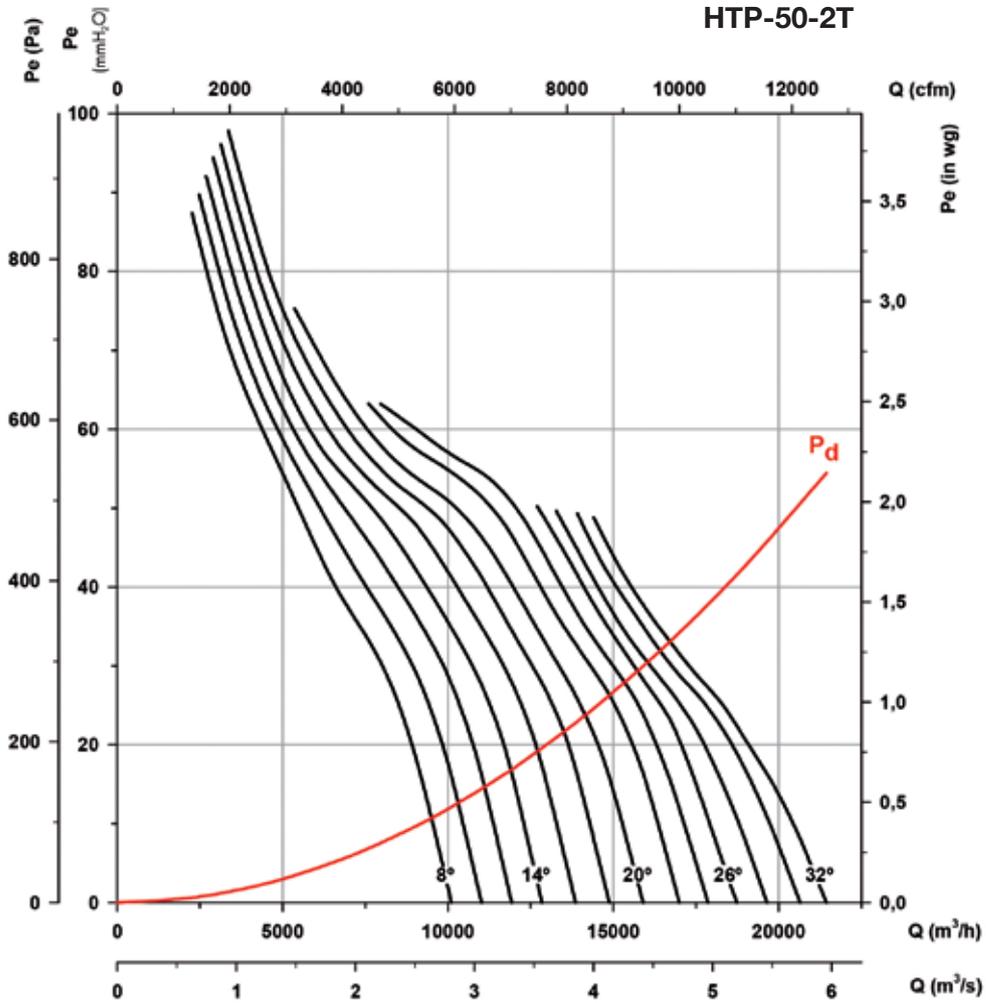

EXAMPLE OF ORDER CODE

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

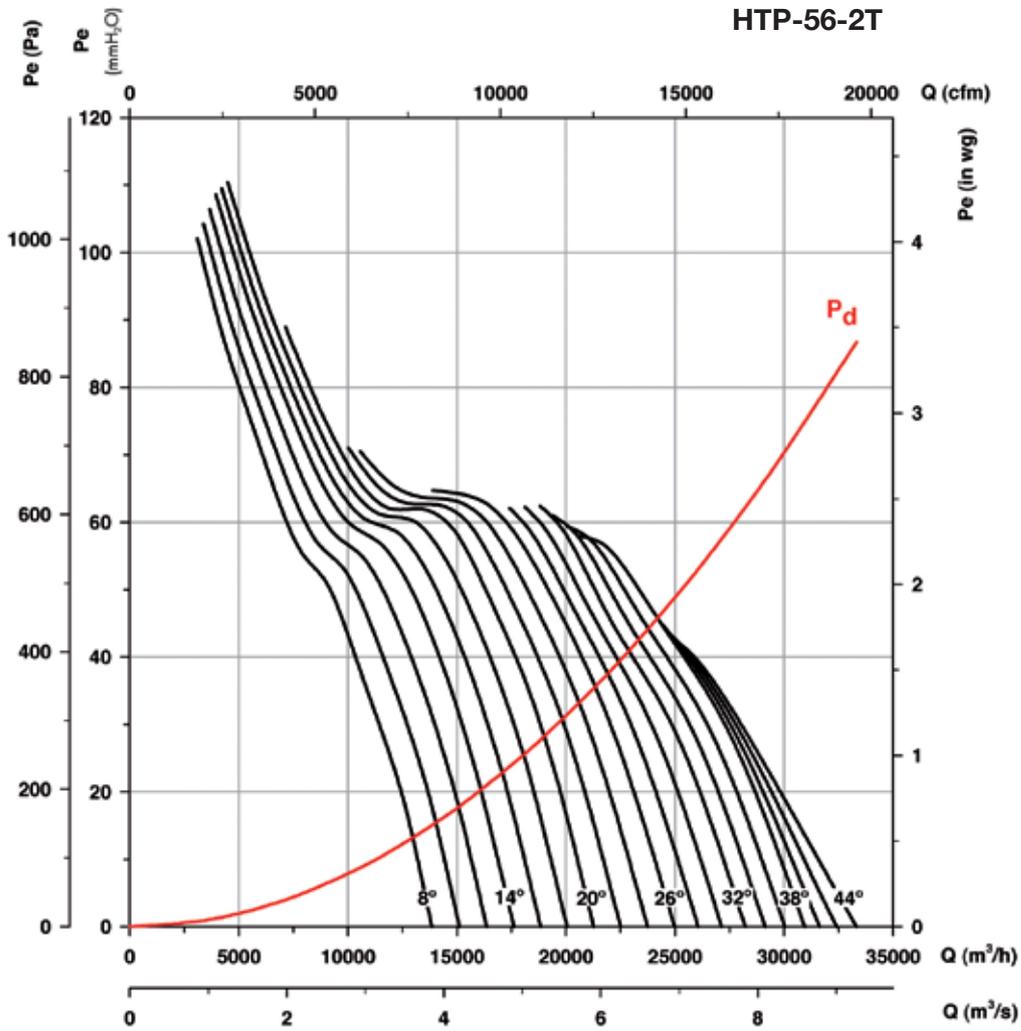

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

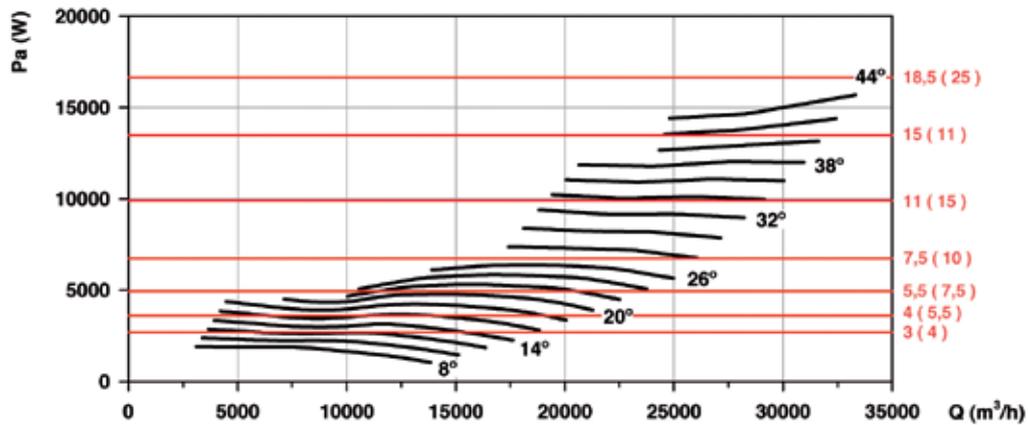

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

Recommended motor power kW (HP)

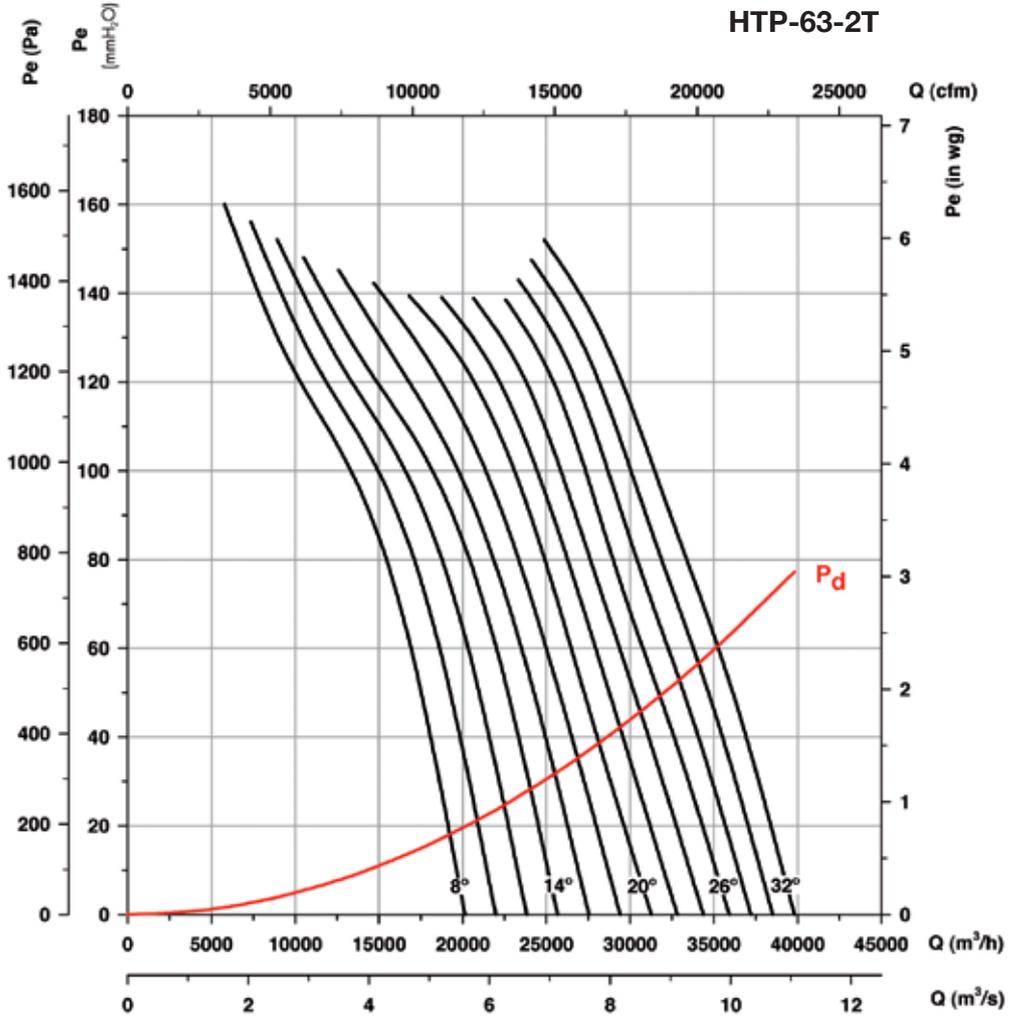

Available features best efficiency point (BEP) at the end of the series.

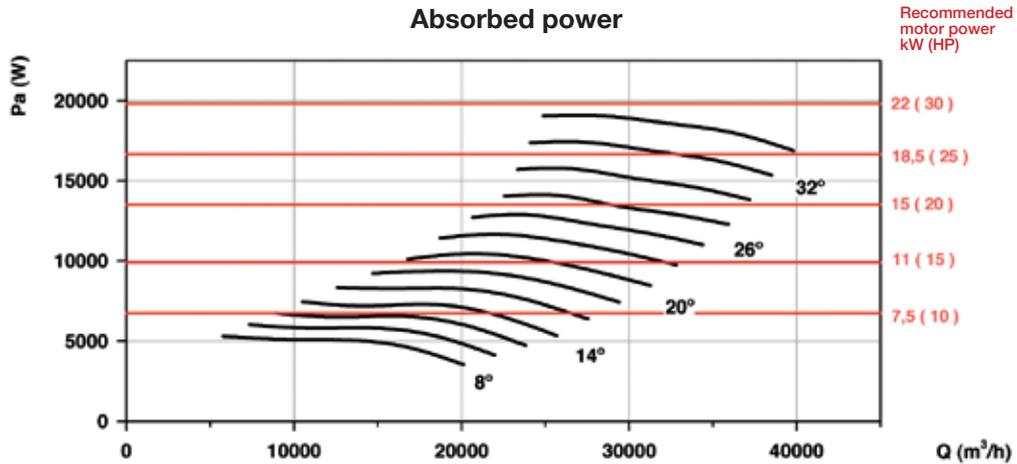

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

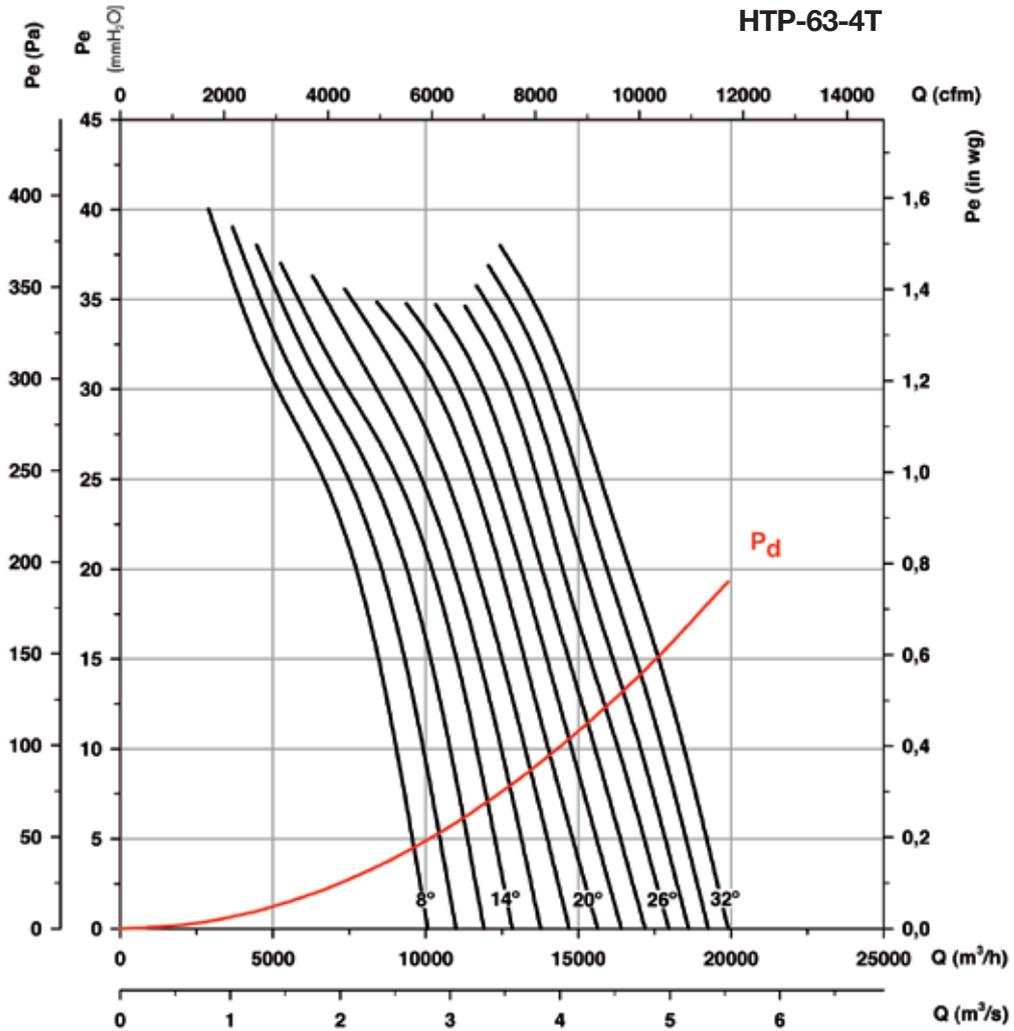

Available features best efficiency point (BEP) at the end of the series.

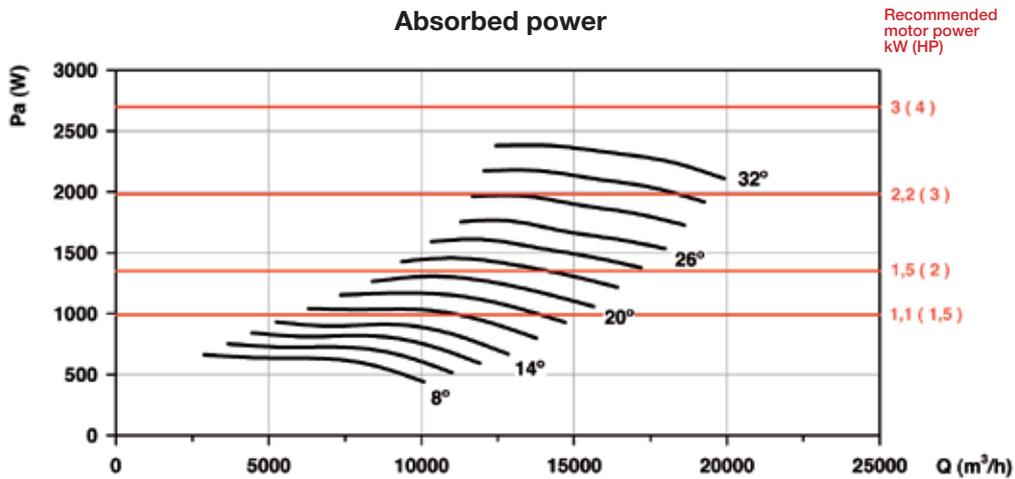

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

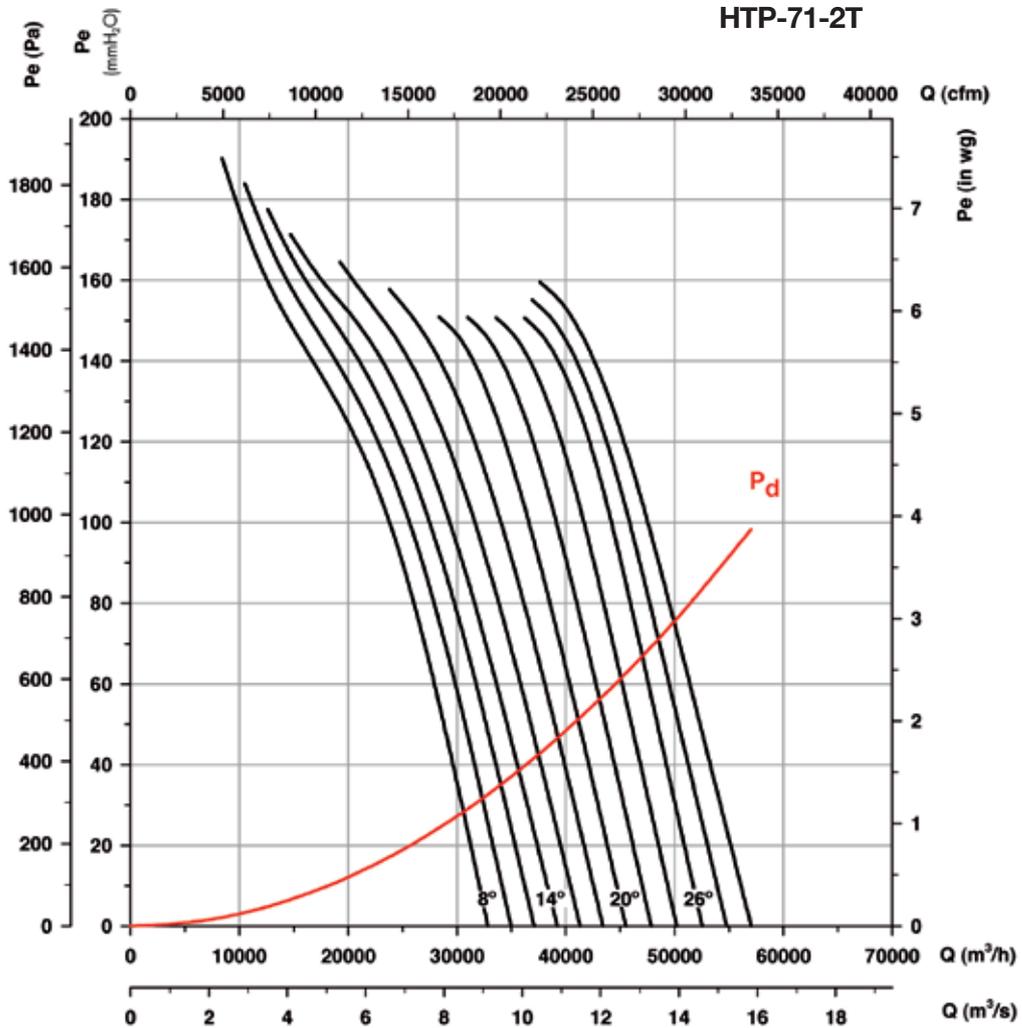

Available features best efficiency point (BEP) at the end of the series.

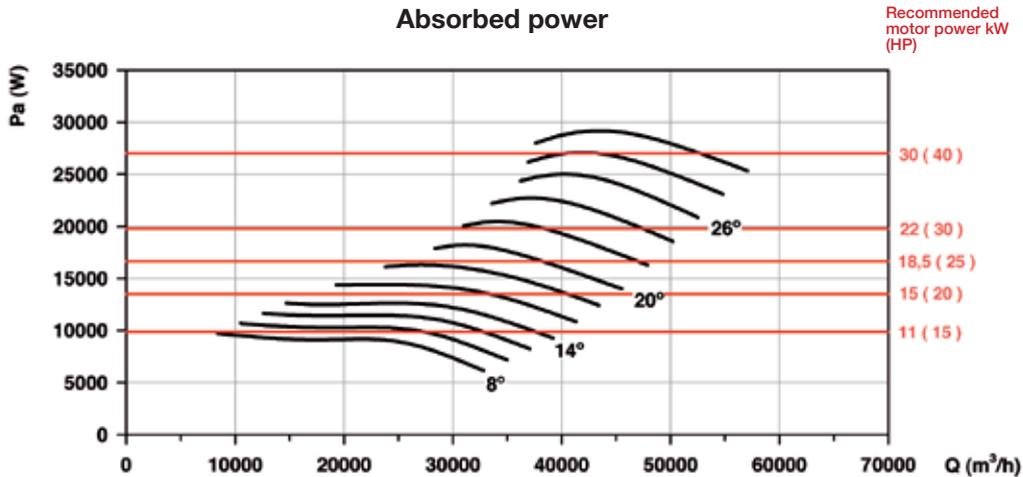

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

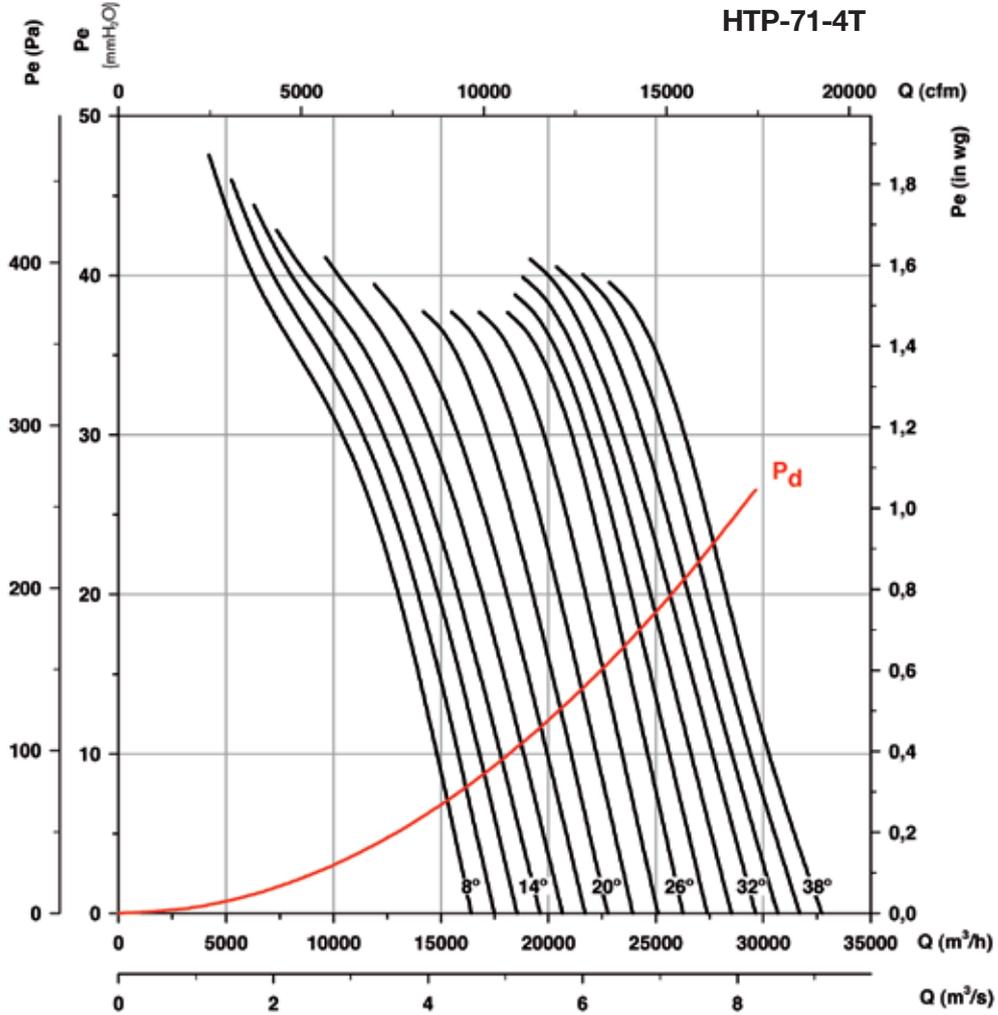

Available features best efficiency point (BEP) at the end of the series.

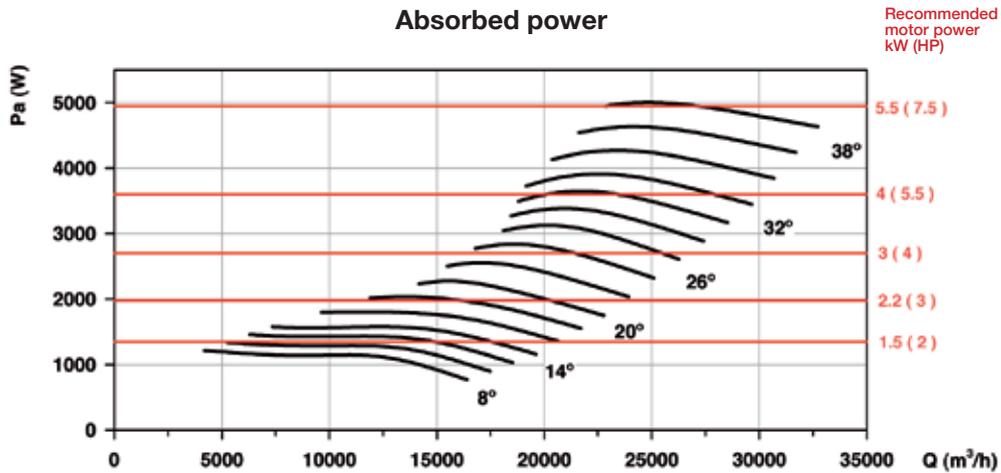

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

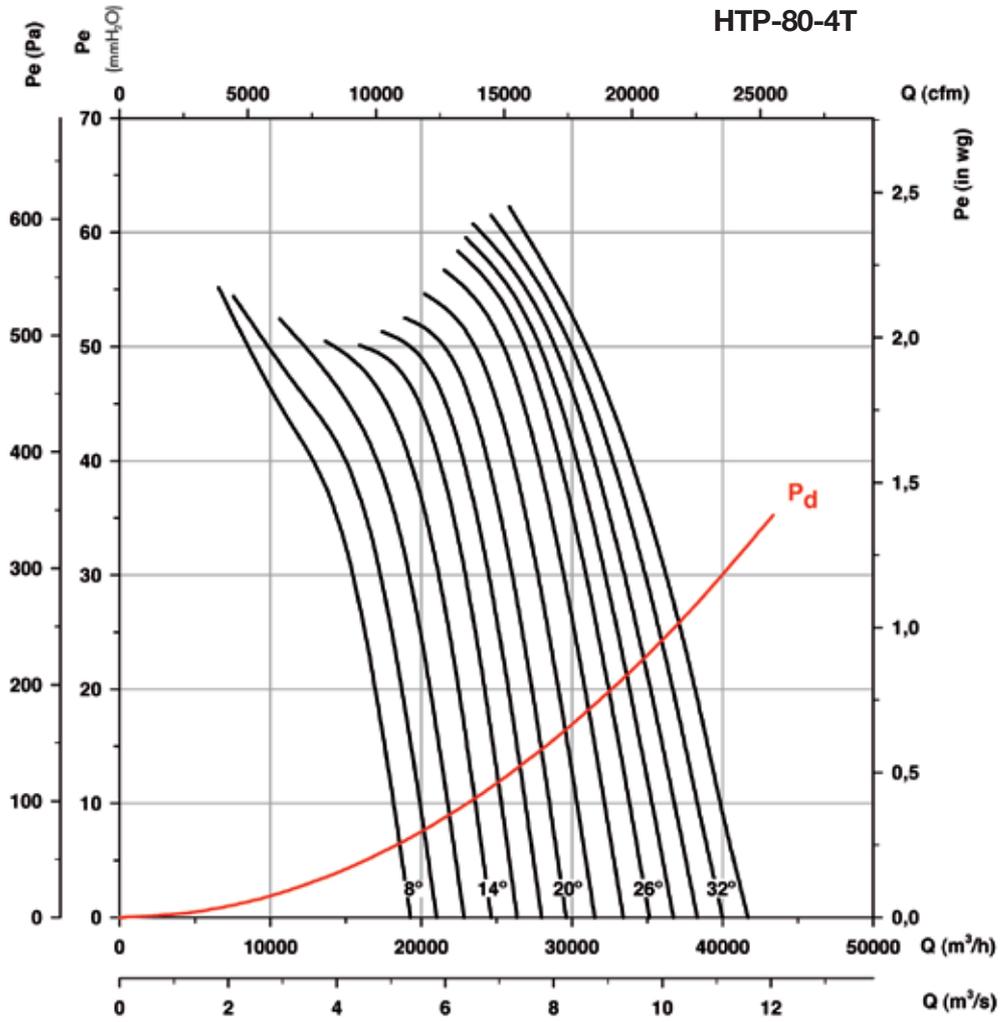

Available features best efficiency point (BEP) at the end of the series.

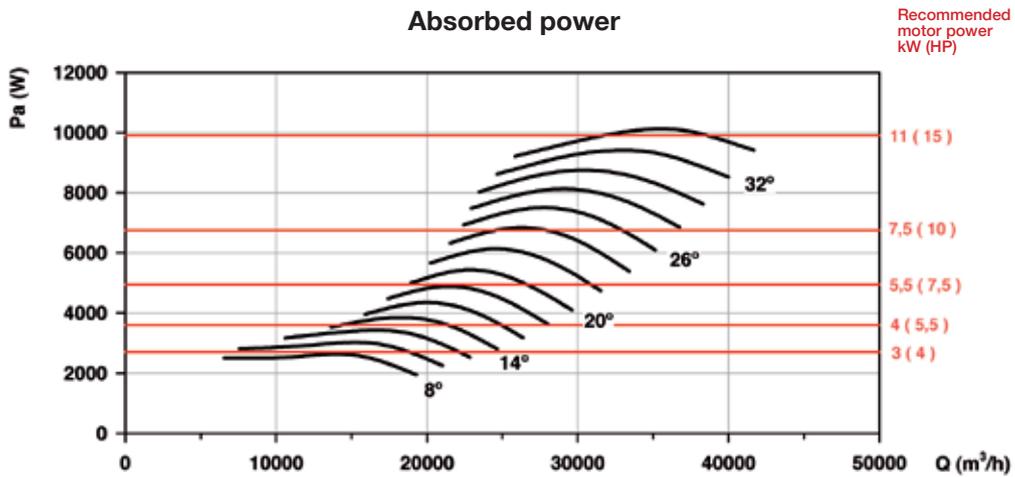

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

Recommended motor power kW (HP)

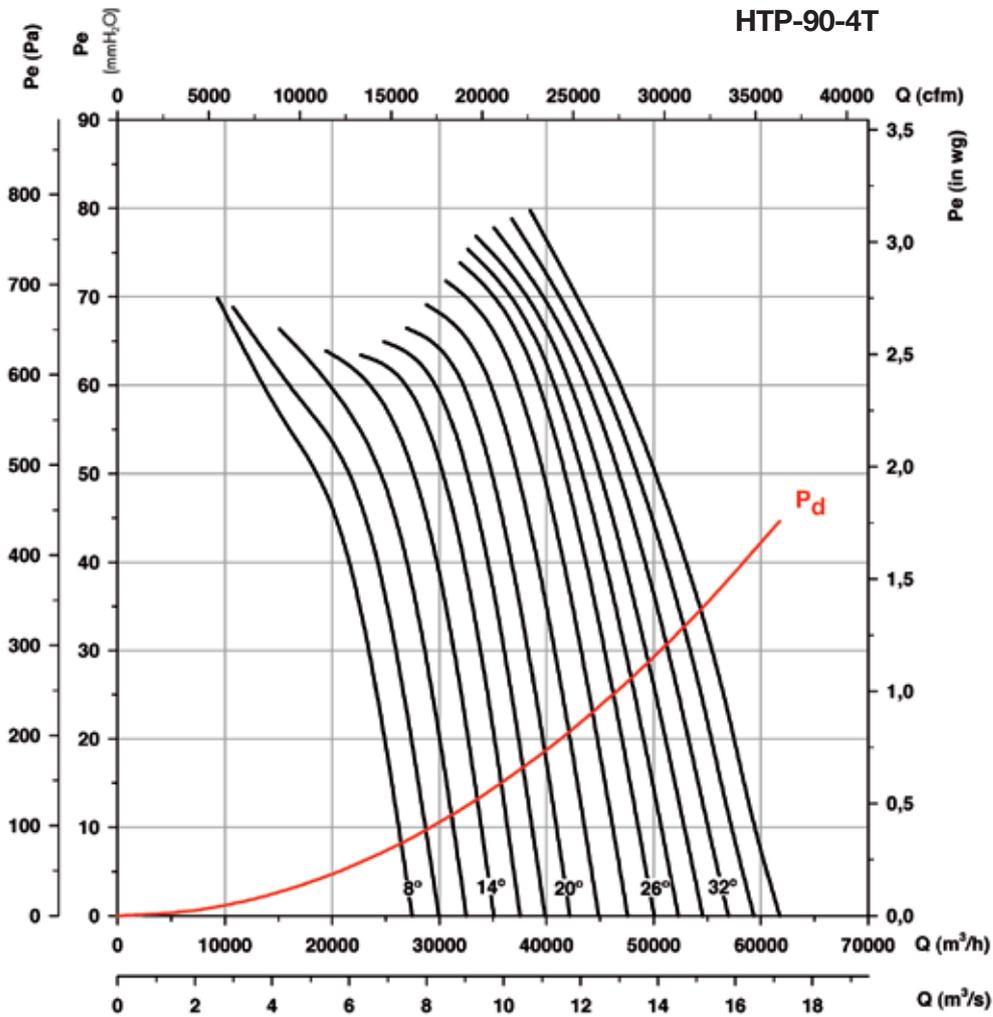

Available features best efficiency point (BEP) at the end of the series.

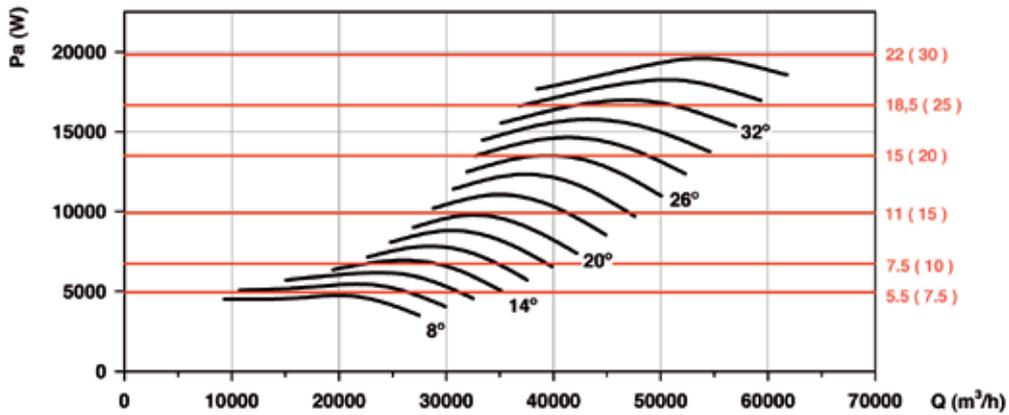

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

Recommended motor power kW (HP)

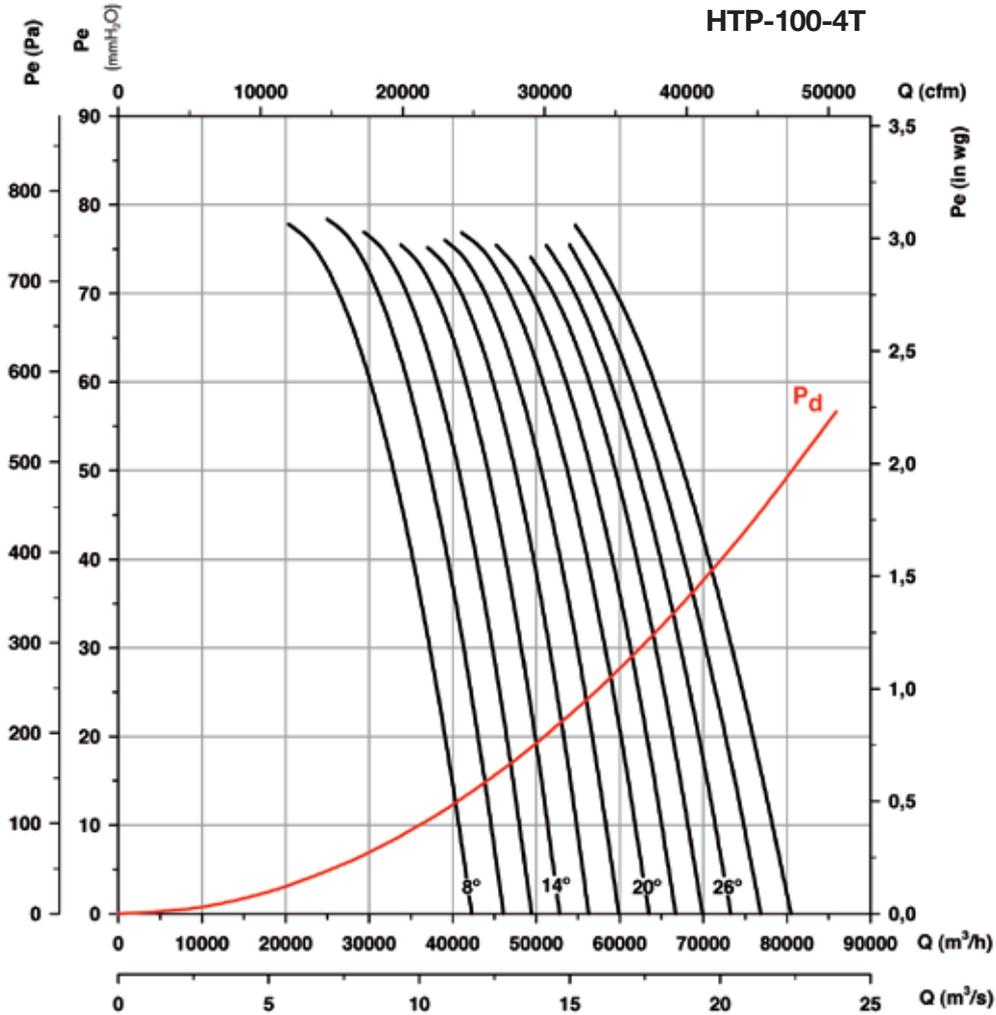

Available features best efficiency point (BEP) at the end of the series.

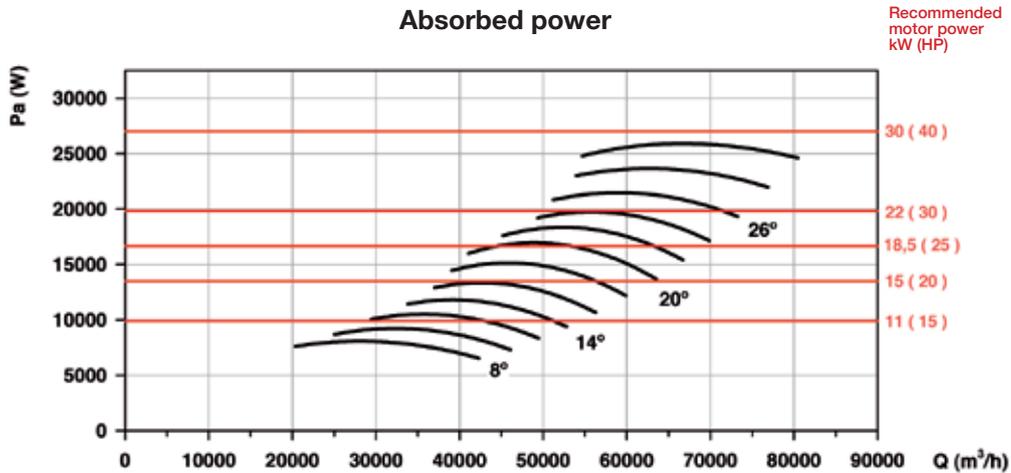

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

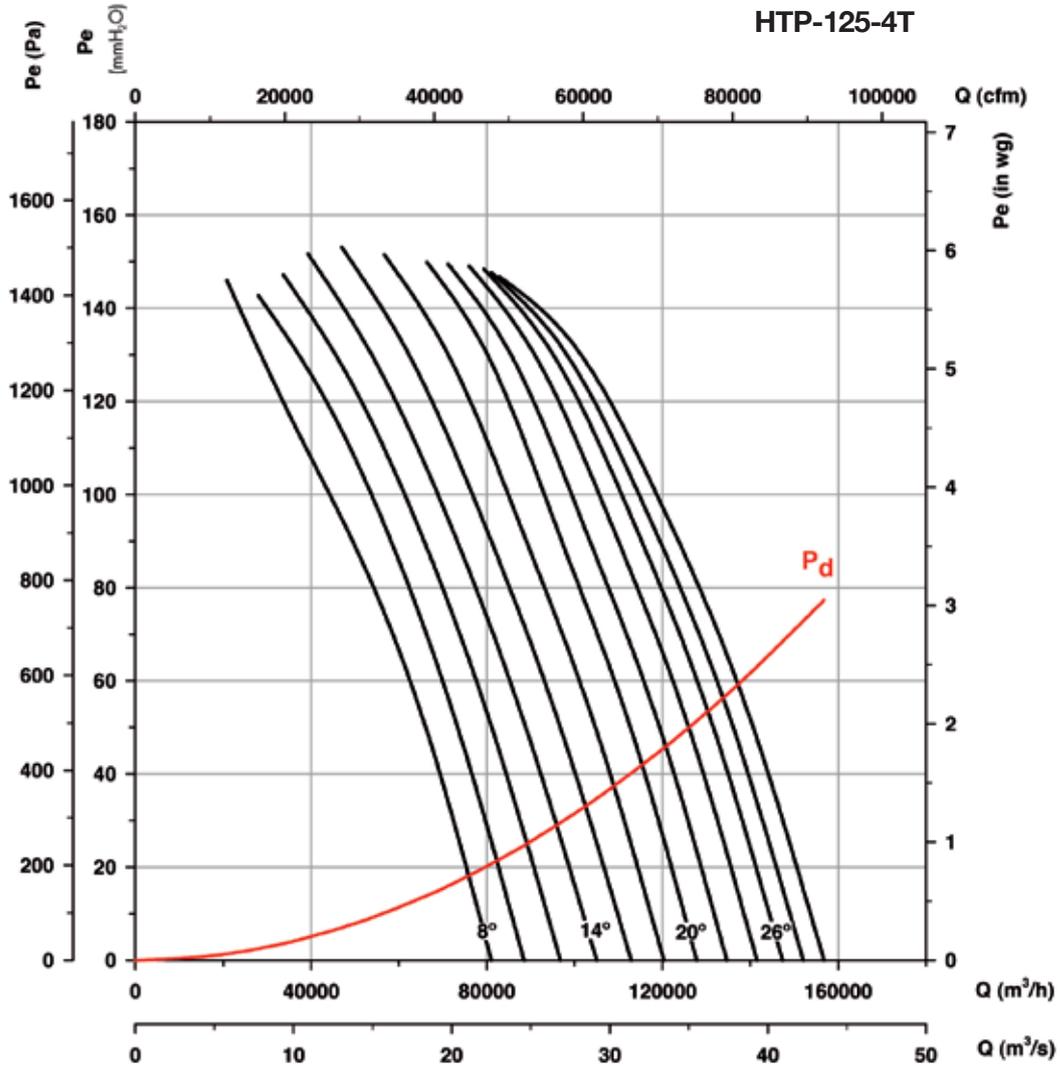

Available features best efficiency point (BEP) at the end of the series.

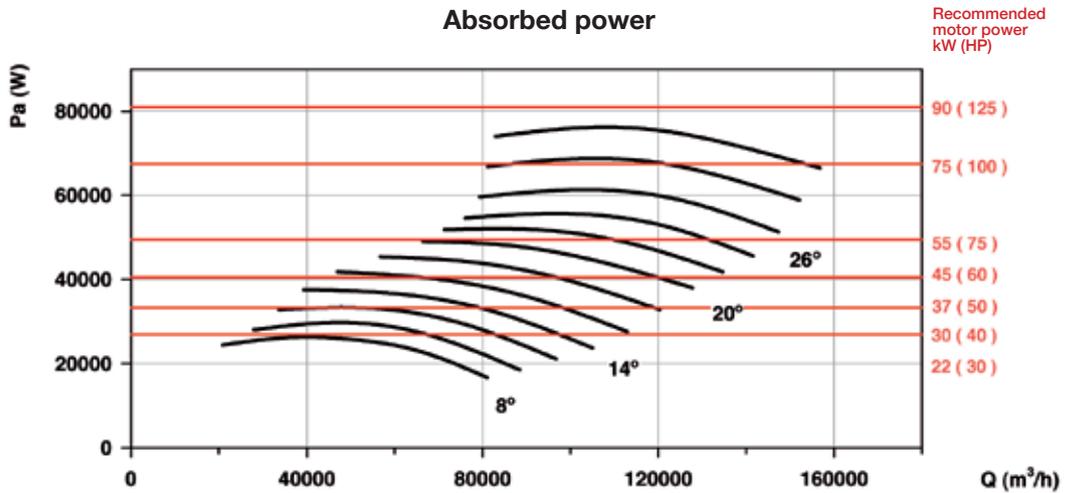

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Absorbed power

Available features best efficiency point (BEP) at the end of the series.

HGT HGTX

HGT: Large diameter long cased axial fans with direct drive motor

HGTX: Large diameter long cased axial fans with external motor

Long cased axial fans, supplied with 3, 6 or 9 blade aluminium impellers with different slope angles.

HGT

HGTX

Fan:

- Airflow direction from motor to impeller
- Impellers made from cast aluminium supplied with 3, 6 or 9 blades with adjustable slope angles.
- Sheet steel cased casing
- HGT: The standard version is short casing. The long-casing version is equipped with an inspection hatch.
- HGTX: Standard version in long casing, equipped with an inspection hatch.

Motor:

- IE3 efficiency motors for capacities equal to or over 7.5kW, except single-phase, 2 speed and 8 pole motors
- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- Class F motors, with ball bearings, IP55 protection
- Three-phase 230/400V-50Hz. (up to 4kW) and 400/690V-50Hz. (power over 4kW)
- Fan working temperature:
HGT: -25°C +50°C
HGTX: -25°C +120°C

Finish:

- Anticorrosive finish in polyester resin polymerised at 190°C, after degreasing with phosphate-free nanotechnology treatment.

On request:

- Airflow direction from impeller to motor.
- 100% reversible impellers.
- Special windings for different voltages.
- ATEX certification, Category 2
- HGT: Long-casing fans with inspection hatch
- Two-speed motors
- IE2 and IE3 efficiency motors for any power

Order code

HGT: Large diameter long cased axial fans with direct drive motor
HGTX: Large diameter long cased axial fans with external motor

Impeller diameter in cm.

Number of motor poles
4=1400 r/min. 50 Hz
6=900 r/min. 50 Hz
8=750 r/min. 50 Hz

T=Three-phase

Number of blades:
3 blades
6 blades
9 blades

Motor power (HP)

Angle of inclination of the blades

PV=Distributor

Acoustic features

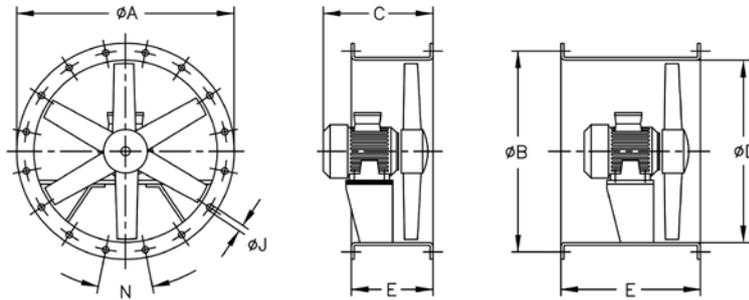

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

EXAMPLE OF SELECTION

Characteristic Curves

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mm H₂O, Pa and inwg.

Impeller diameter (cm): 125 Number of poles: 8 Number of blades: 3

Initial data

- Working point:
- Airflow: 12,500 m³/h
- Load loss: 7.5 mmH₂O

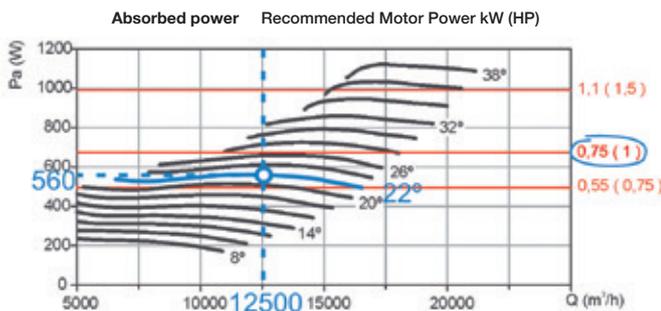

Steps for selecting equipment

On the pressure graph:

- 1 Mark the working point, defined by the airflow (12,500 m³/h) and the load loss (7.5 mmH₂O).
- 2 Select the curve of the equipment which is closest above the working point. In our case, a curve with a blade angle of 22° is obtained.

On the power graph:

- 3 Mark the working point, defined by the airflow (12,500 m³/h) and the selected blade angle (22°).
- 4 Read the absorbed power on the power axis on the left. $P_a = 560$ W at the working point.
- 5 Look for the straight red line which is closest to the working point above. On the right-hand side of the graph, the value of the installed motor power is obtained. In our case, this is 0.75 kW or 1 HP

Absorbed power

Recommended motor power
KW (HP)

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

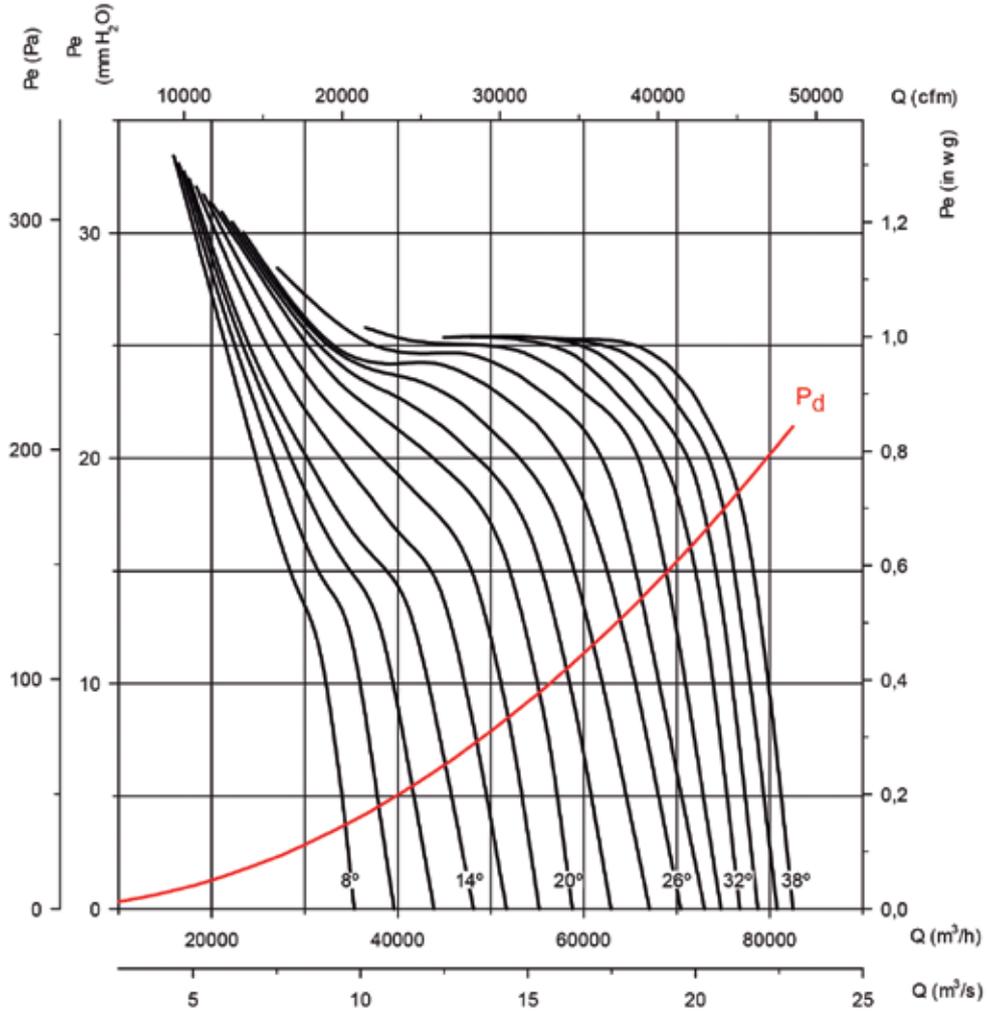

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Impeller diameter (cm): 125

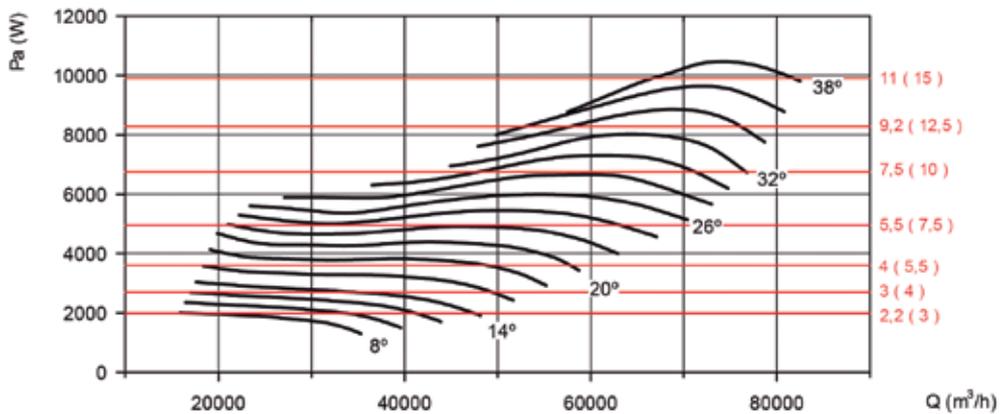

Number of poles: 8

Number of blades: 9

Absorbed power

Recommended motor power kW (HP)

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

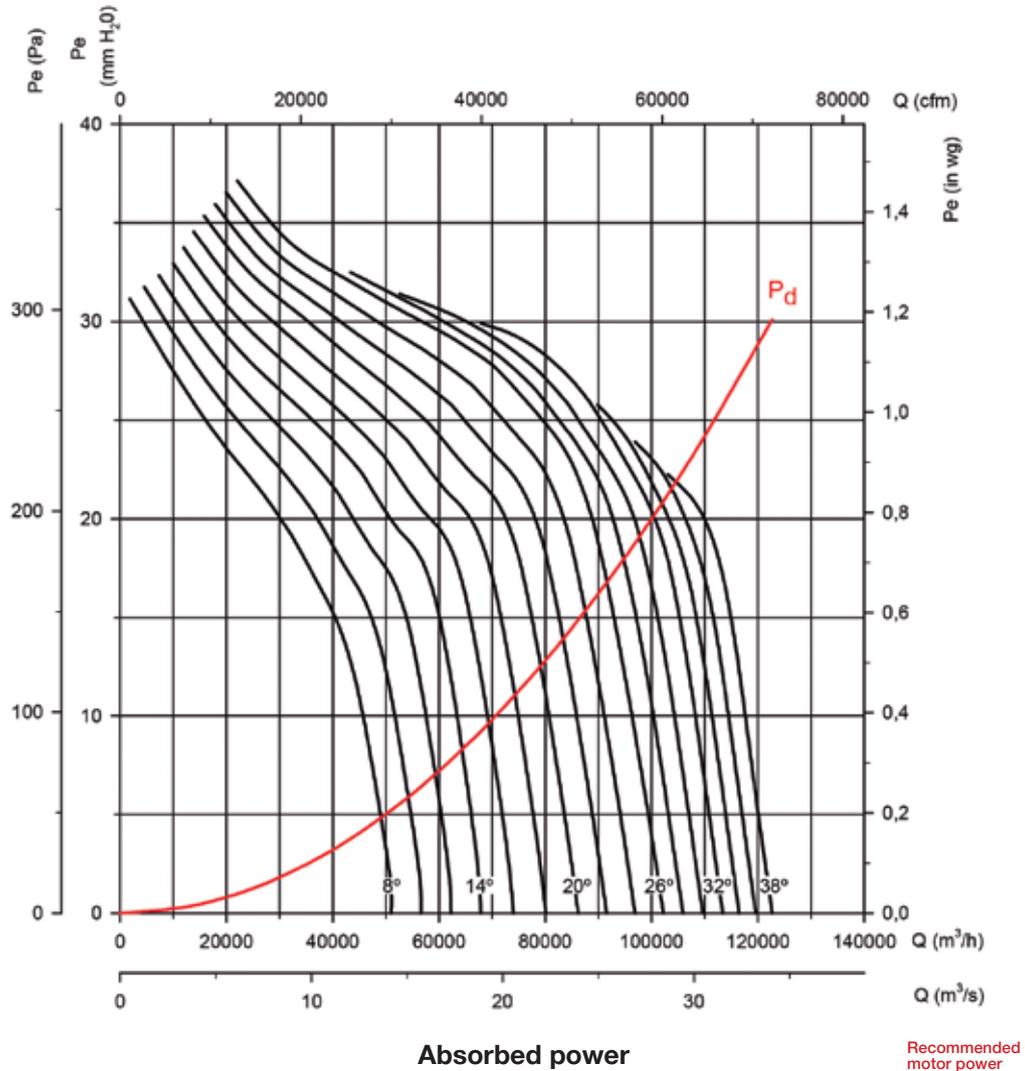

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Impeller diameter (cm): 140

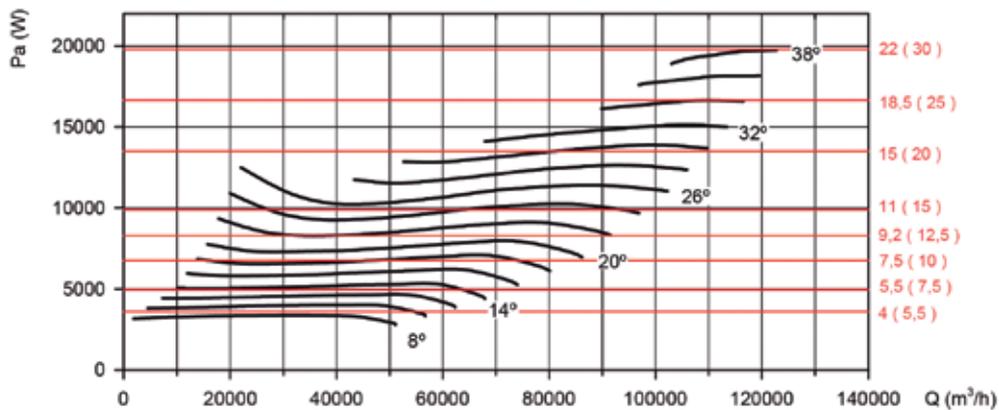

Number of poles: 6

Number of blades: 3

Absorbed power

Recommended motor power kW (HP)

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

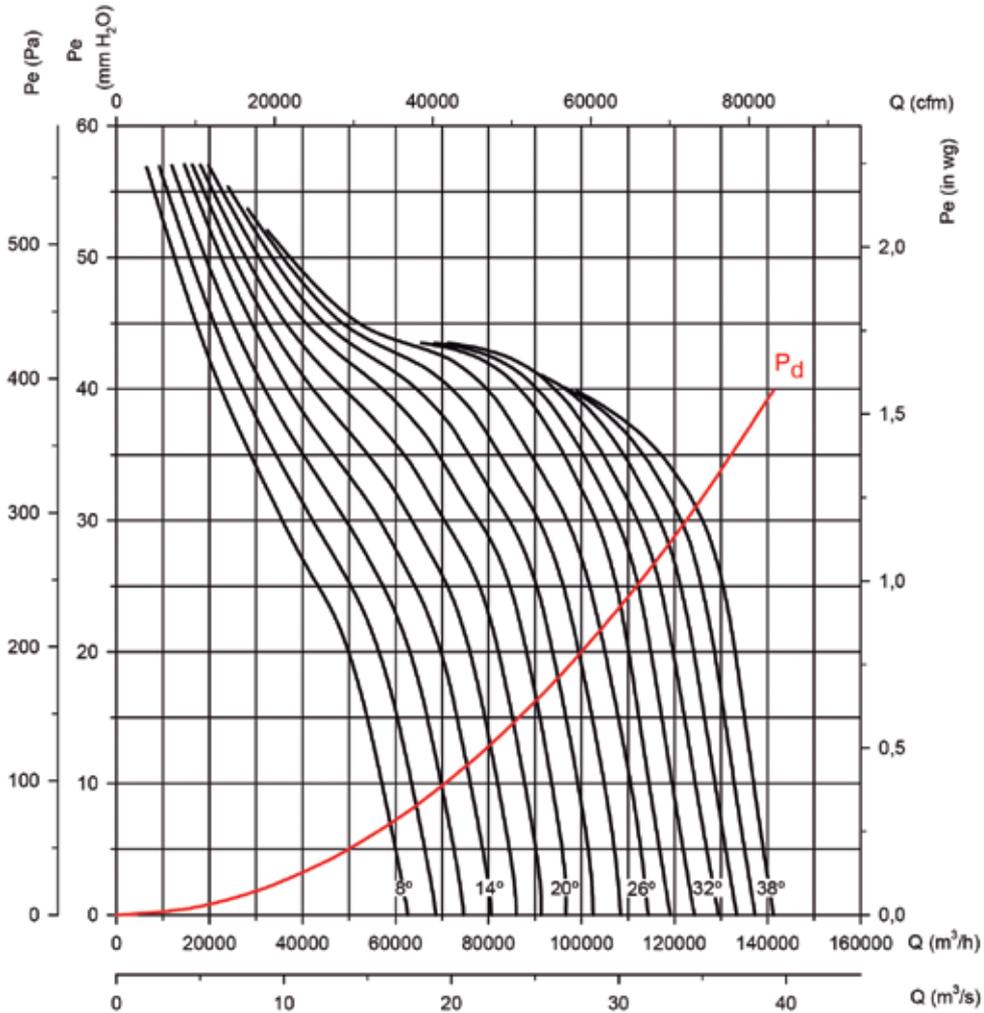

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Impeller diameter (cm): 140

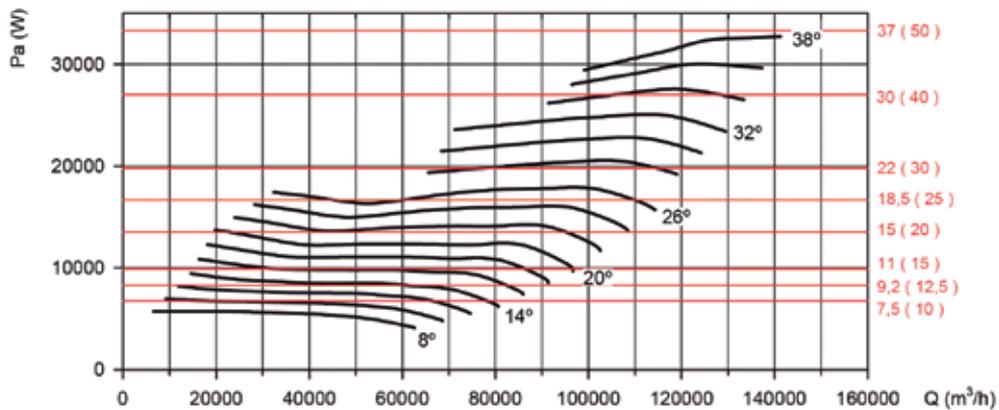

Number of poles: 6

Number of blades: 6

Absorbed power

Recommended motor power kW (HP)

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

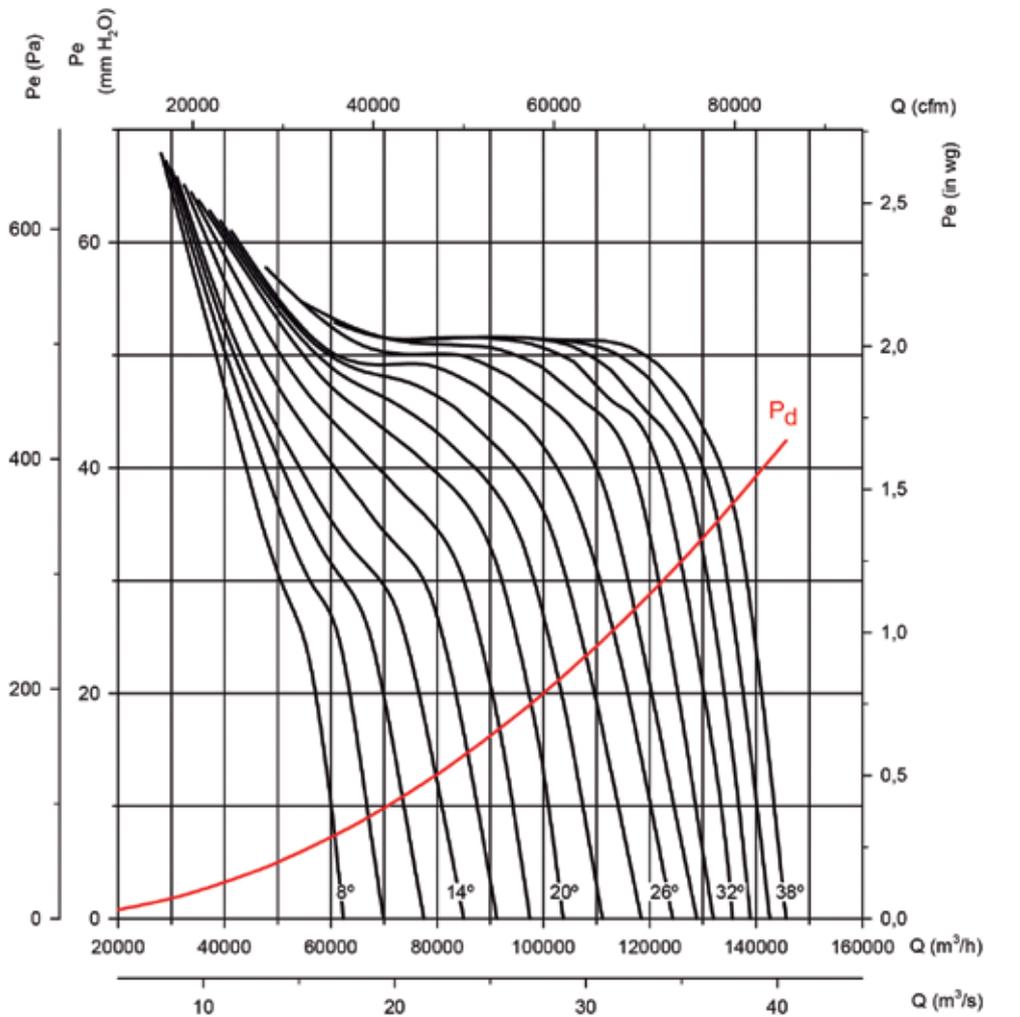

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

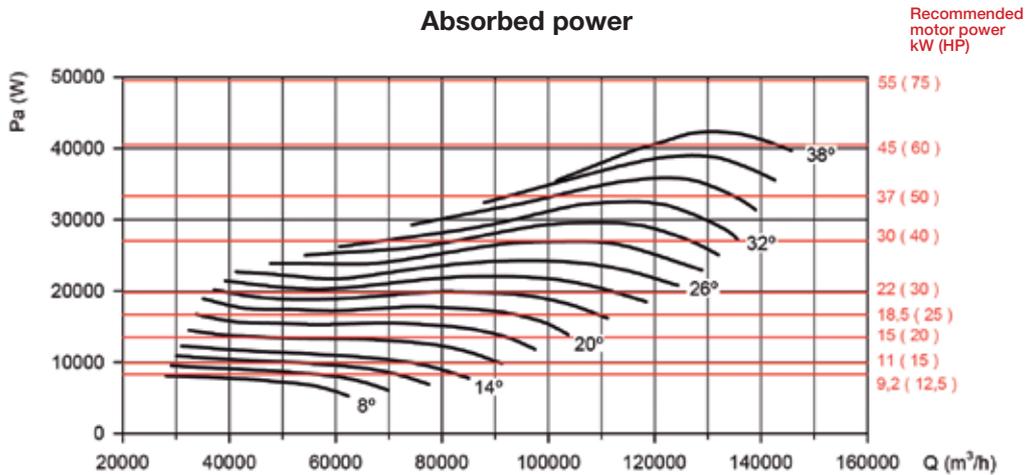

Impeller diameter (cm): 140

Number of poles: 6

Number of blades: 9

Absorbed power

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

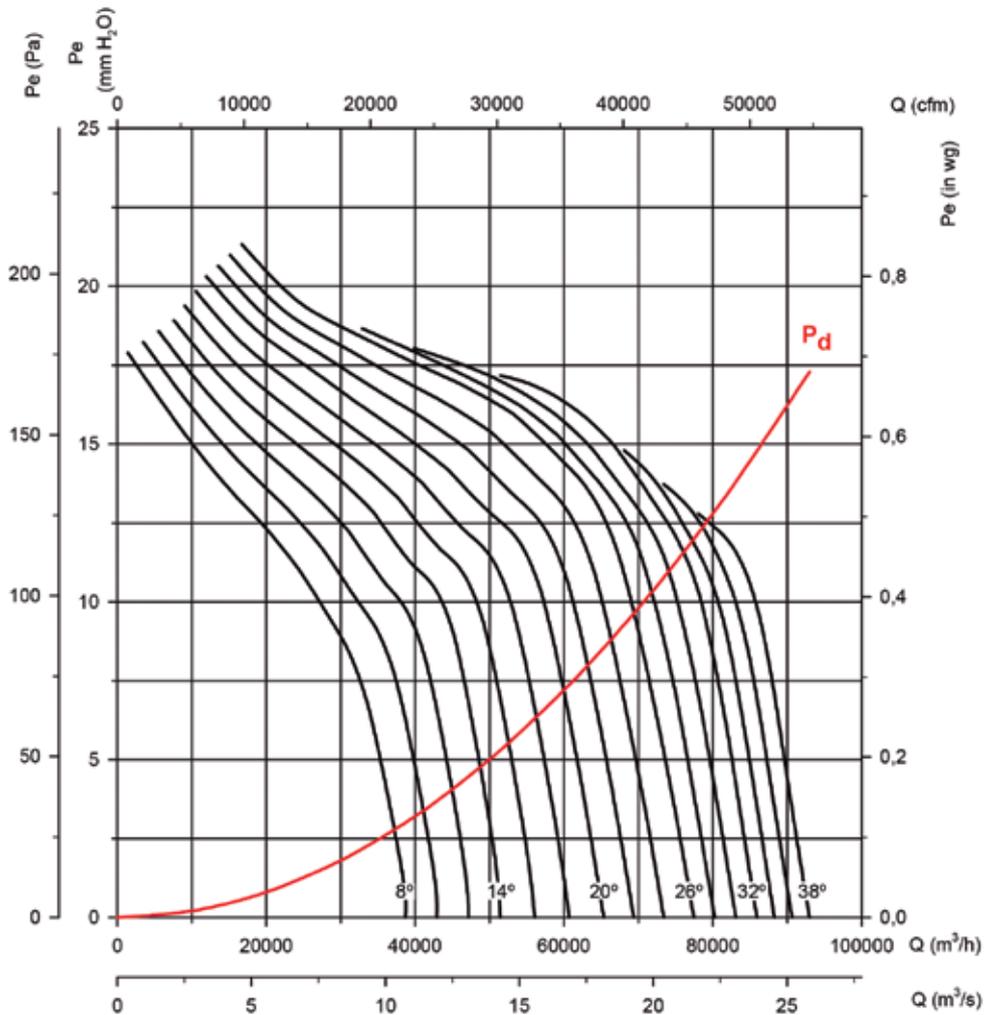

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Impeller diameter (cm): 140

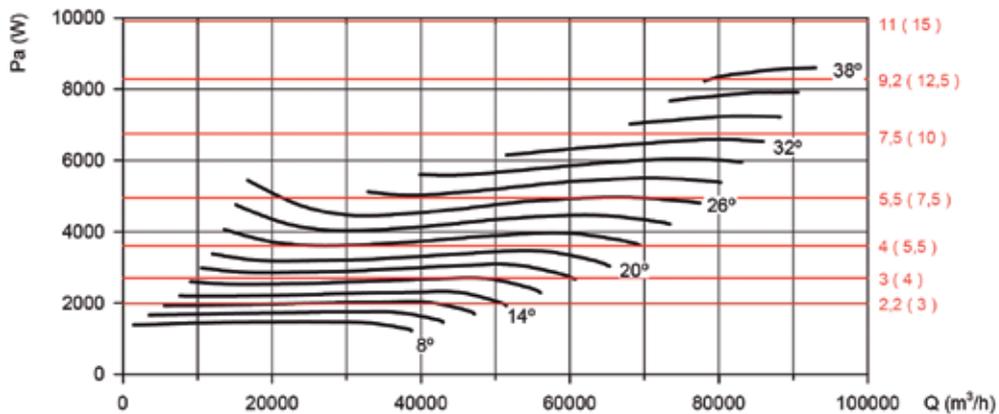

Number of poles: 8

Number of blades: 3

Absorbed power

Recommended motor power kW (HP)

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

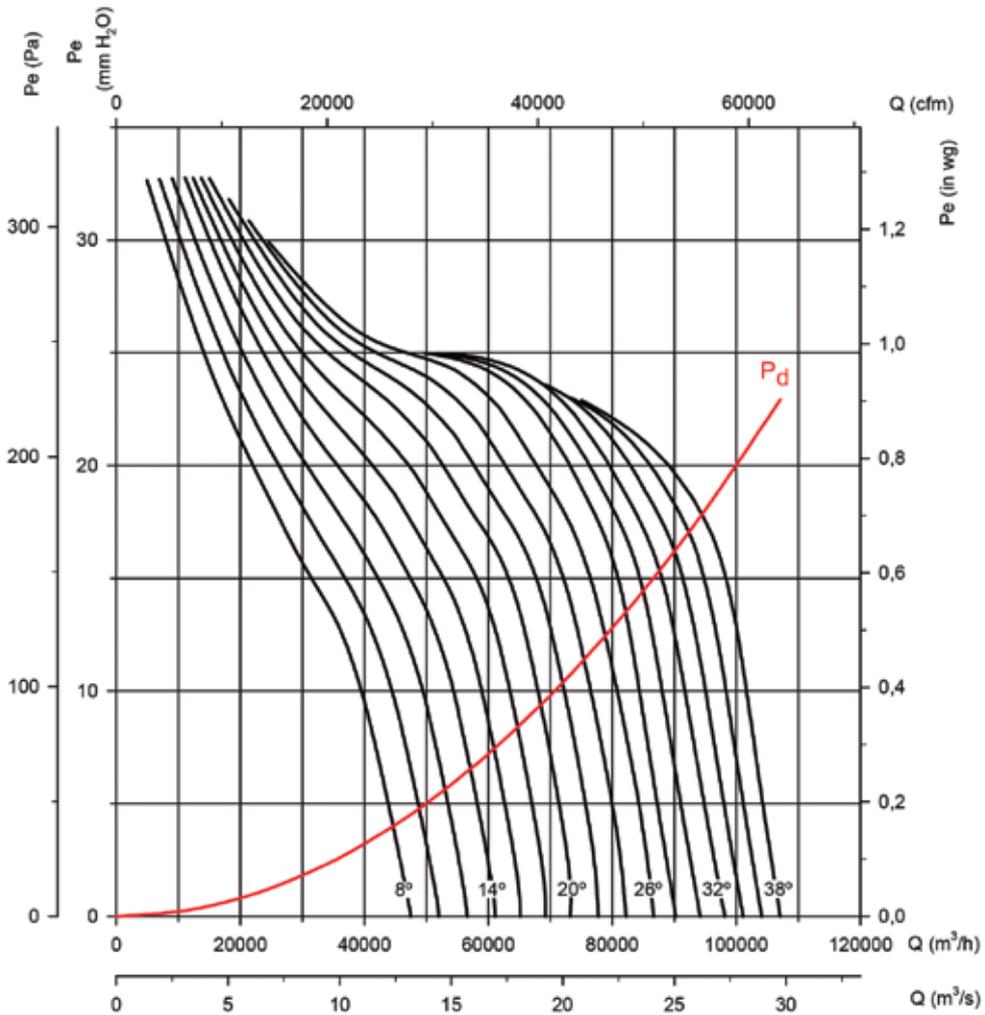

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

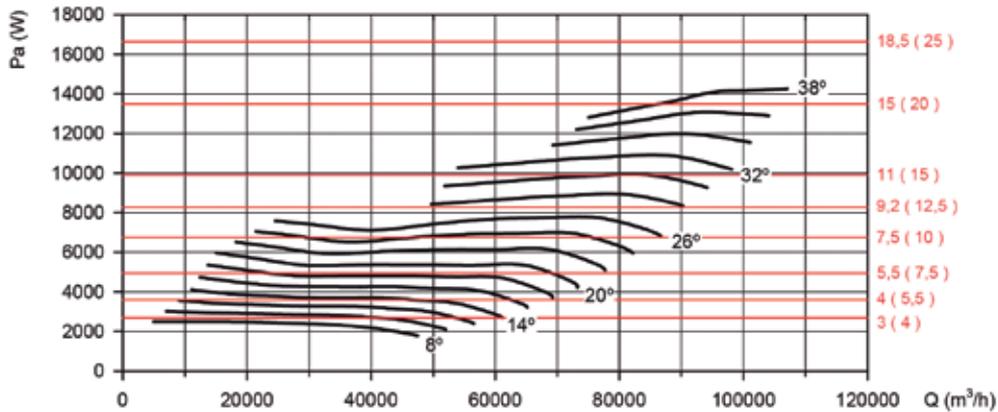

Impeller diameter (cm): 140

Number of poles: 8

Number of blades: 6

Absorbed power

Recommended motor power kW (HP)

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

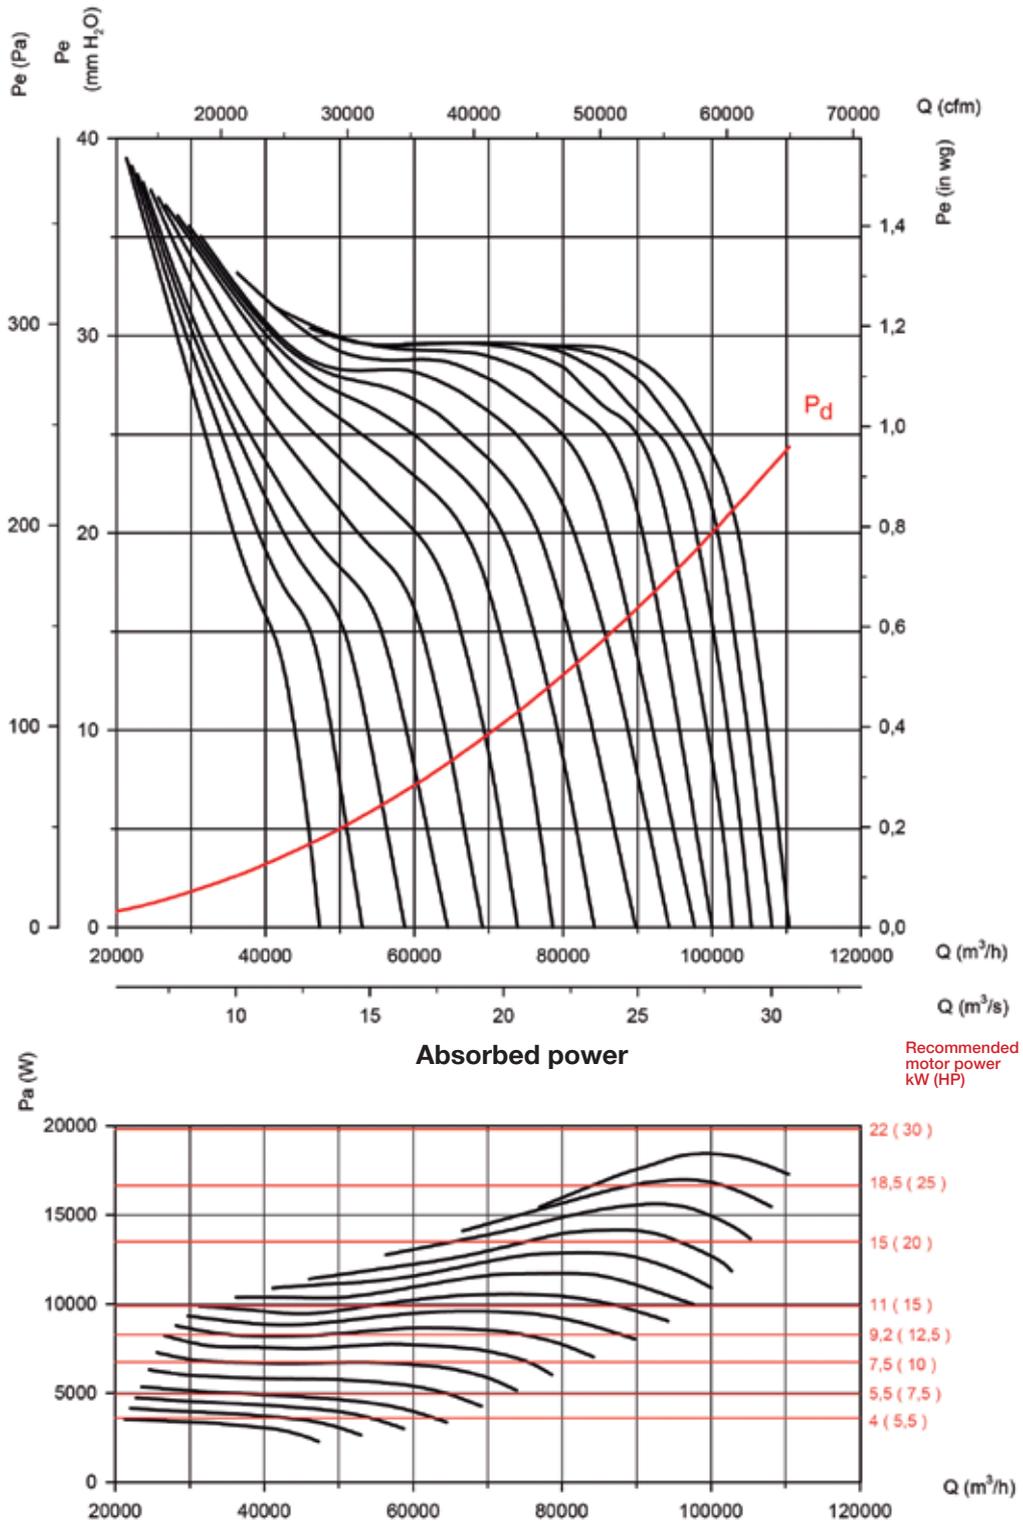

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Impeller diameter (cm): 140

Number of poles: 8

Number of blades: 9

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

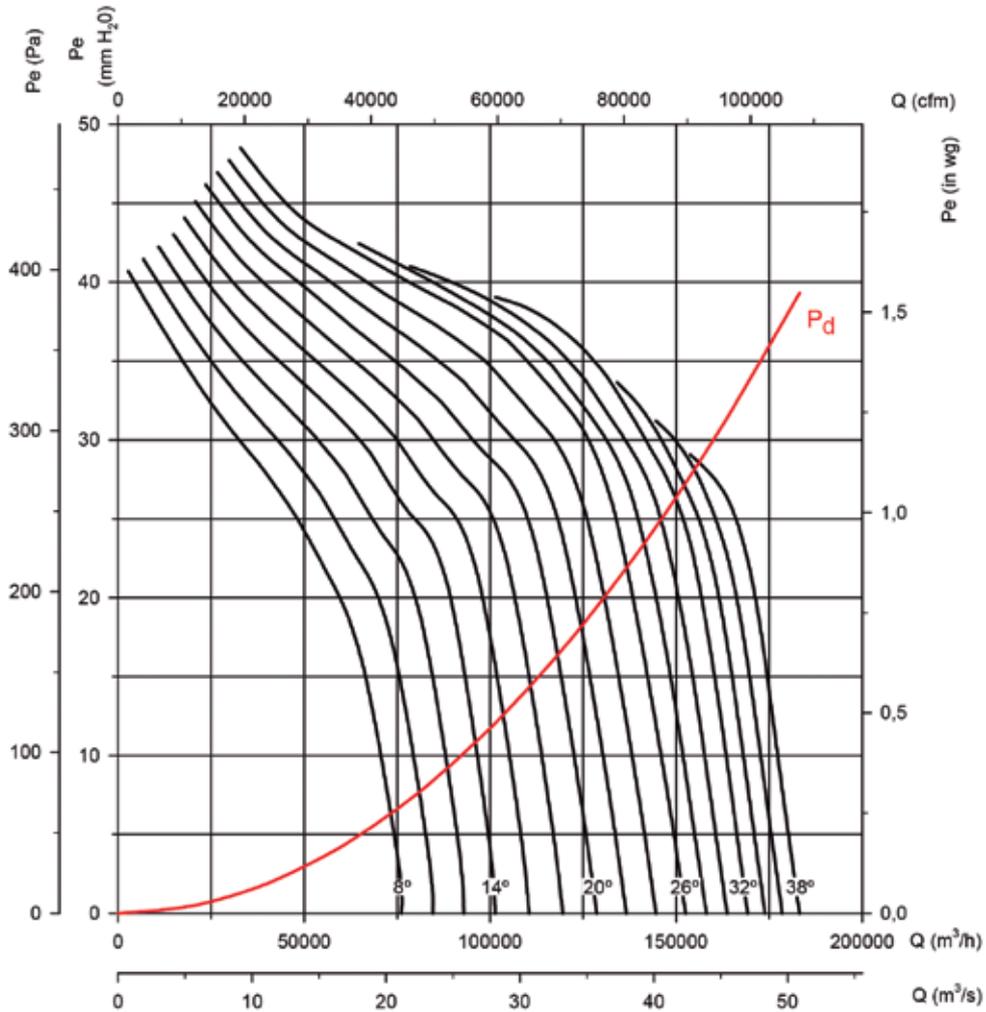

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Impeller diameter (cm): 140

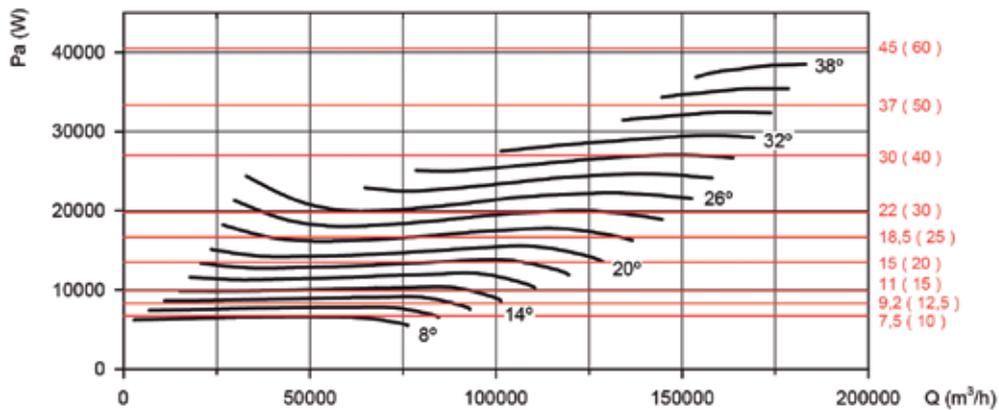

Number of poles: 6

Number of blades: 3

Absorbed power

Recommended motor power kW (HP)

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

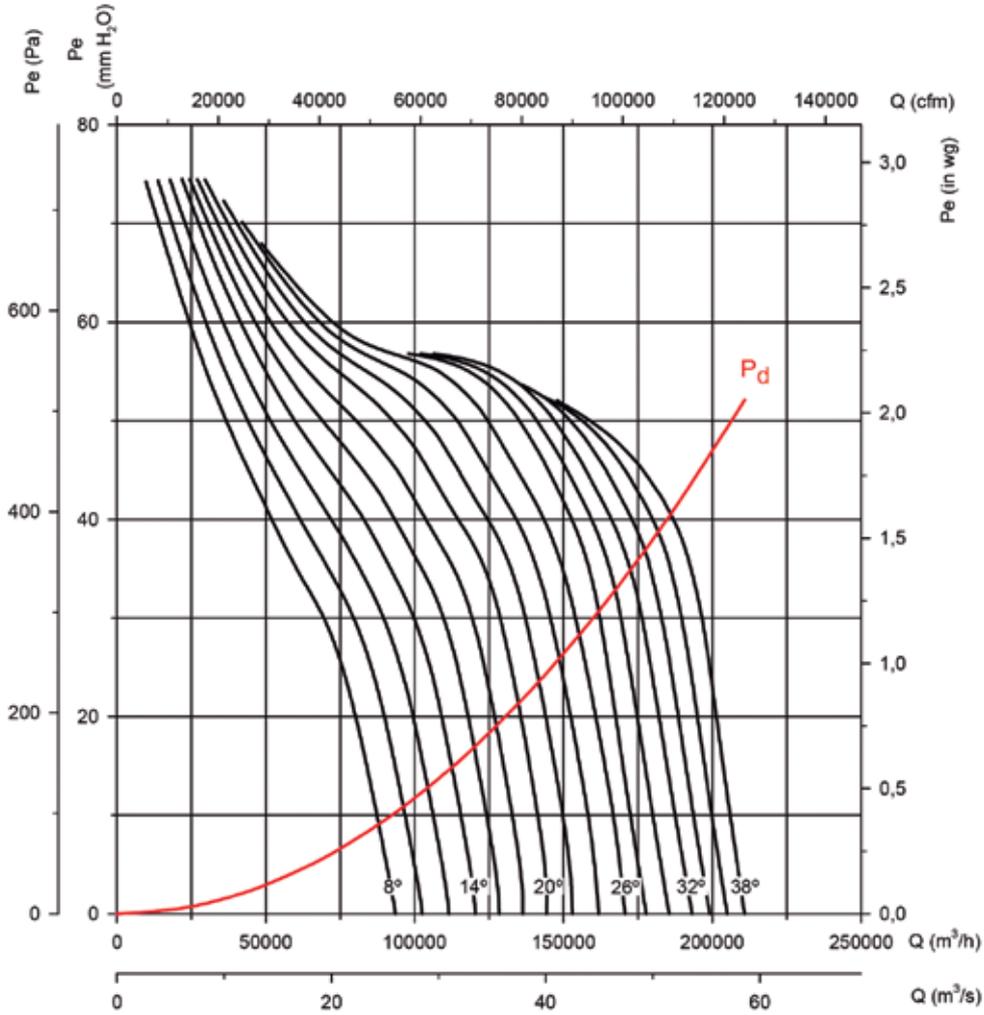

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

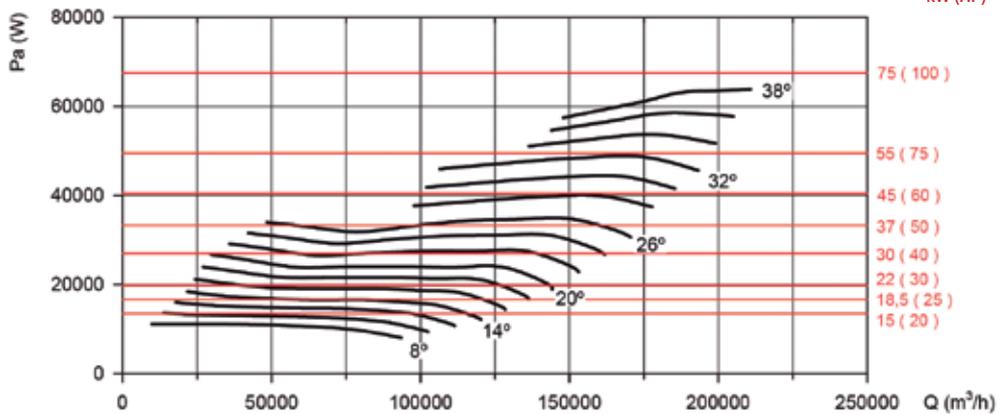

Impeller diameter (cm): 160

Number of poles: 6

Number of blades: 6

Absorbed power

Recommended motor power kW (HP)

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

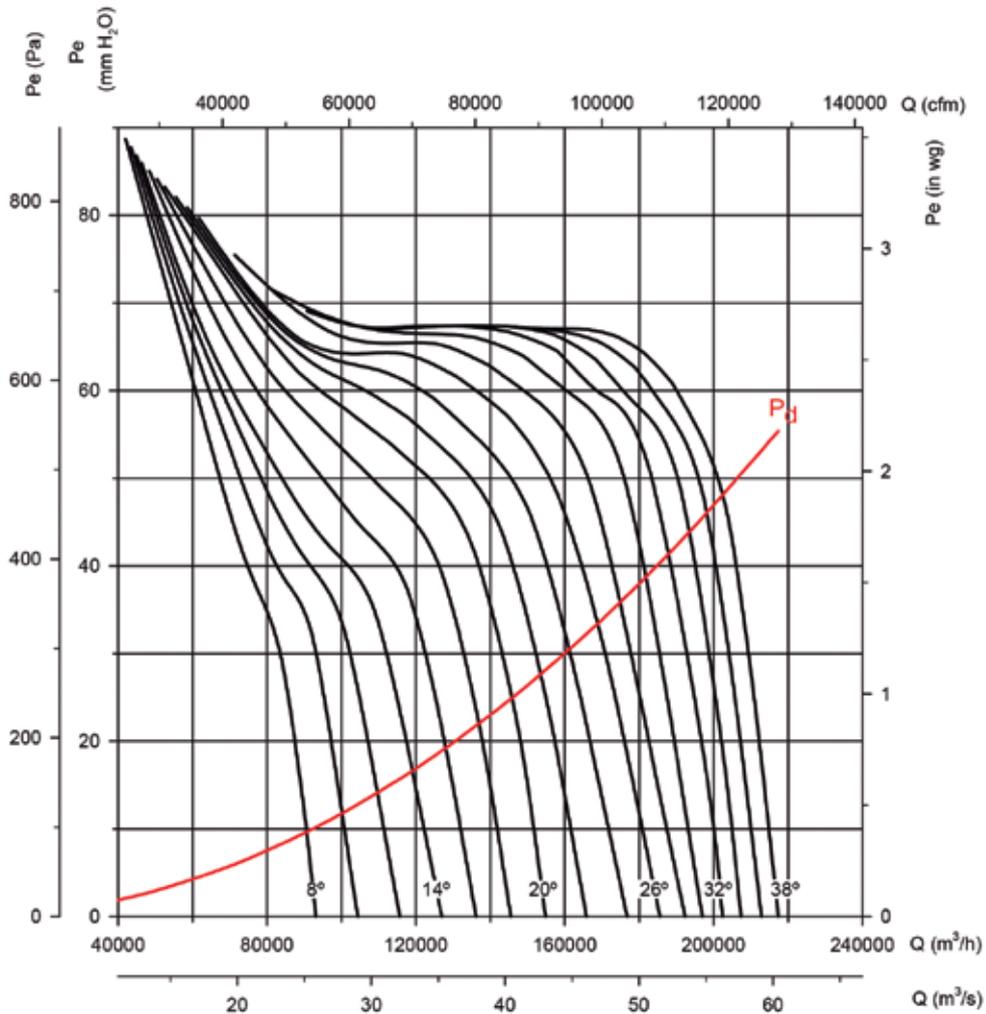

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

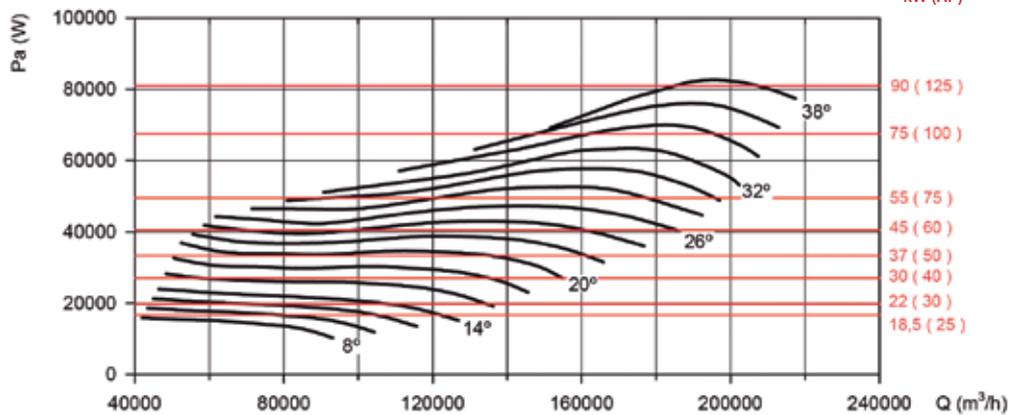

Impeller diameter (cm): 160

Number of poles: 6

Number of blades: 9

Absorbed power

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

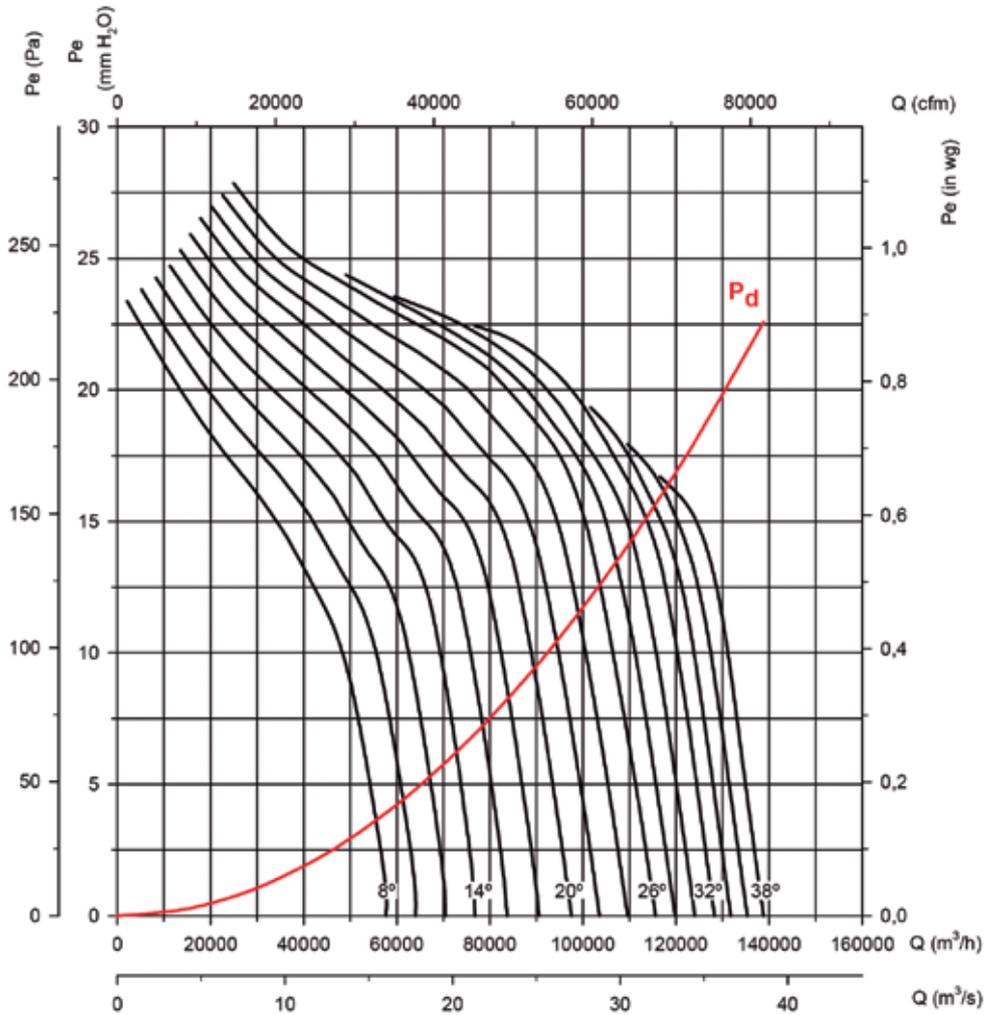

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

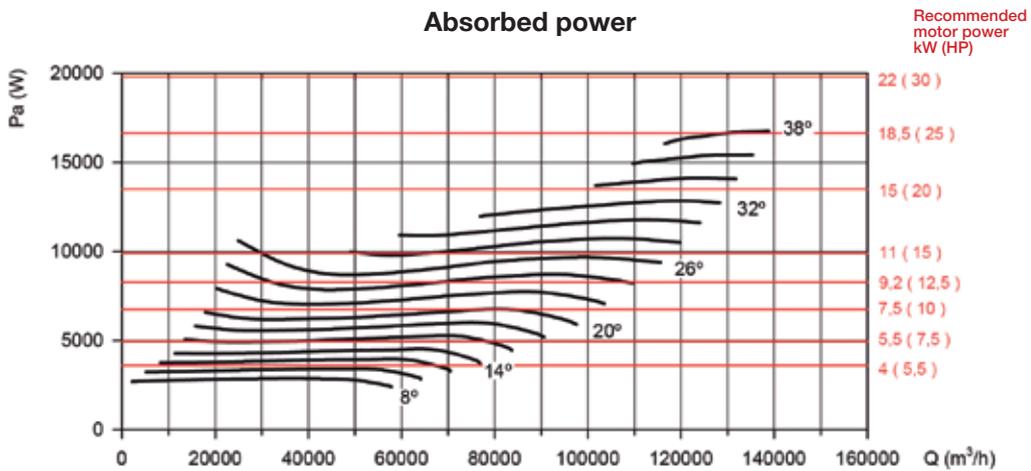

Impeller diameter (cm): 160

Number of poles: 8

Number of blades: 3

Absorbed power

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

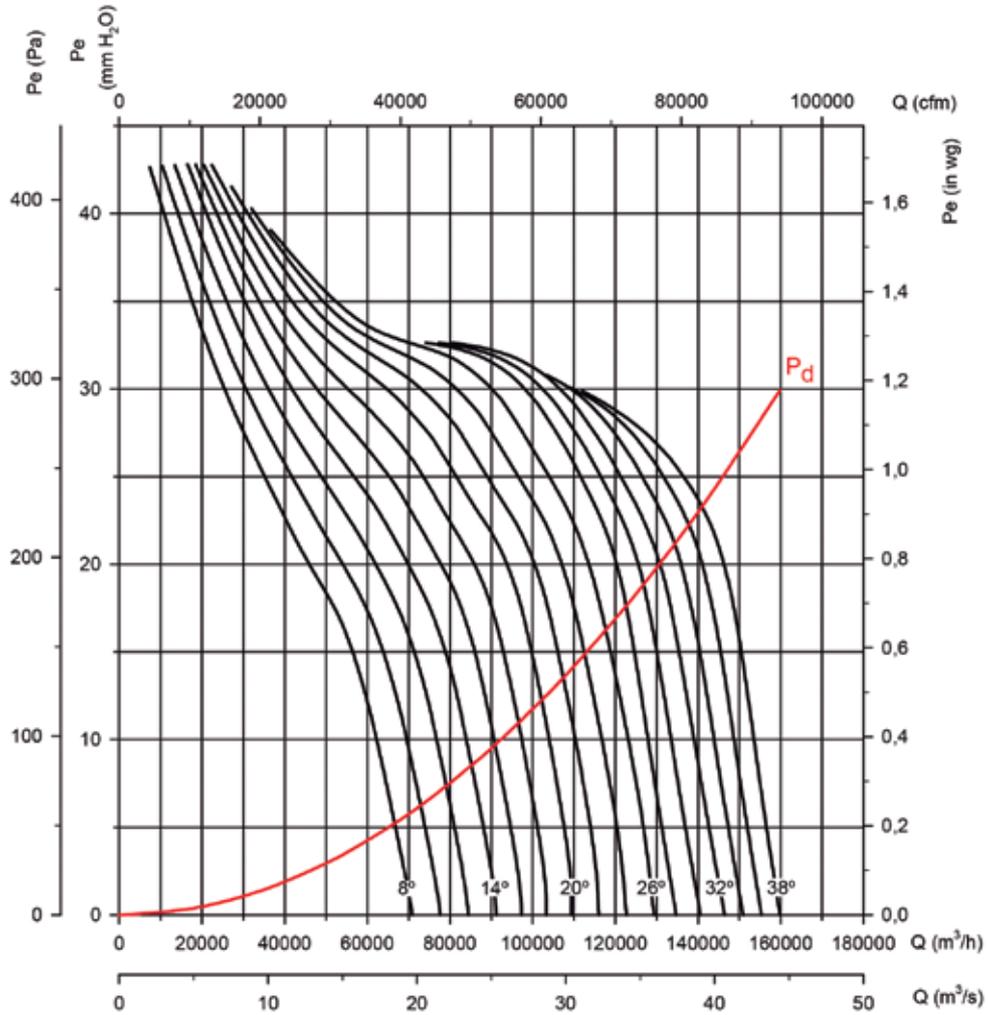

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

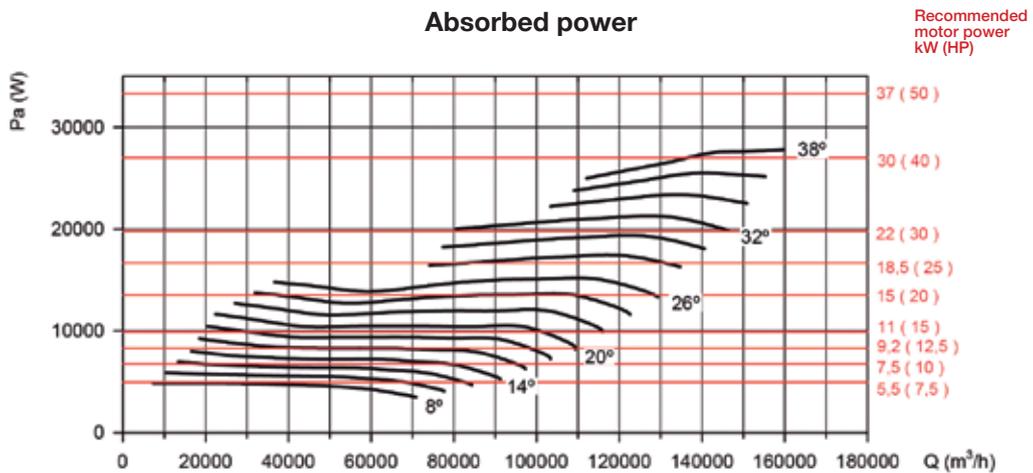

Impeller diameter (cm): 160

Number of poles: 8

Number of blades: 6

Absorbed power

Available features best efficiency point (BEP) at the end of the series.

Characteristic Curves

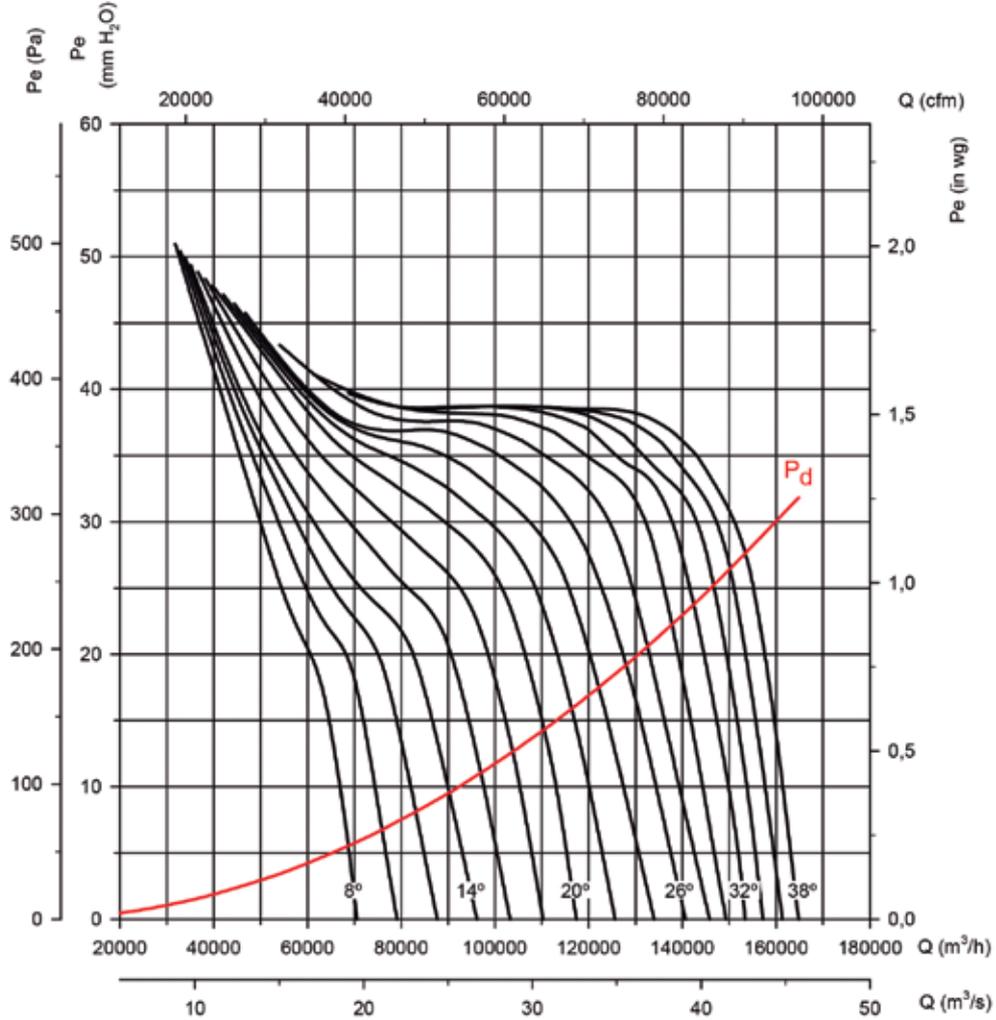

Q = Airflow in m³/h, m³/s and cfm.

Pe = Static pressure in mmH₂O, Pa and inwg.

Impeller diameter (cm): 160

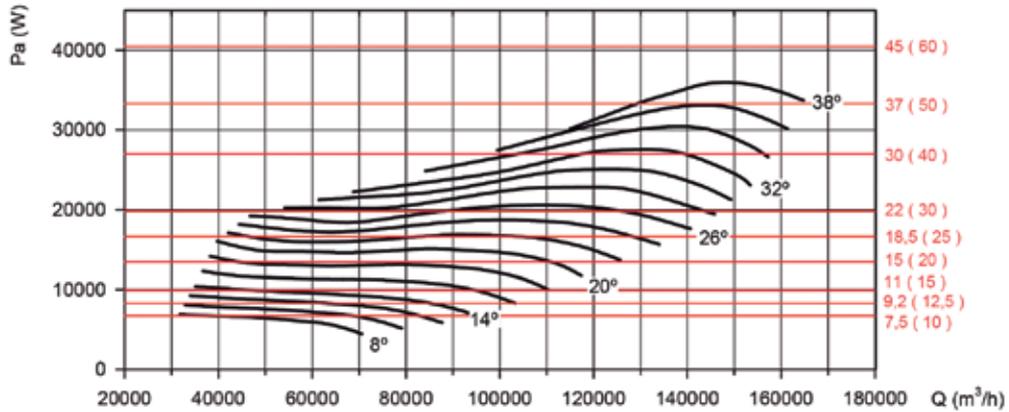

Number of poles: 8

Number of blades: 9

Absorbed power

Recommended motor power kW (HP)

Available features best efficiency point (BEP) at the end of the series.

Erp. BEP (best efficiency point) characteristics

| | | | |
|-------|---|---------|--|

Mobile long-cased axial fans

Mobile fans with possibility of directing airflow.

Fan:

- Sheet steel cased casing
- Impeller in polyamide 6 reinforced with fibre glass
- Protection guard to prevent contacts according to standard UNE-EN ISO 12499:2010 on both sides
- Connection box with start-stop switch that can be rearmed manually to prevent the fan being switched on accidentally (EN ISO 12100:2012)
- Airflow direction from motor to impeller

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- Class F motors, with ball bearings and IP55 protection, except single-phase versions from size 35 to size 56, IP54 protection.
- Single-phase 230V.-50Hz., and three-phase 230/400V.-50Hz.
- Fan working temperature: -25°C + 50°C

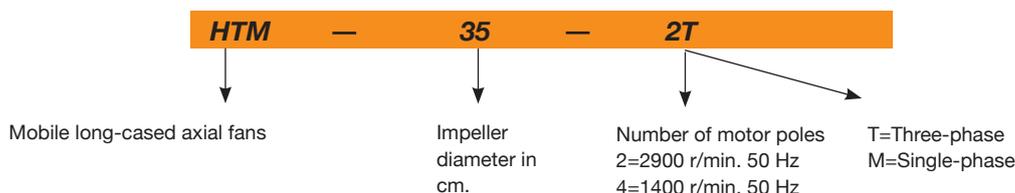

Finish:

- Anticorrosive finish in polyester resin polymerised at 190°C, after degreasing with phosphate-free nanotechnology treatment.

On request:

- Airflow direction from impeller to motor
- 100% reversible impellers.
- Special windings for different voltages
- ATEX certification, Category 2

Order code

Acoustic features

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

Characteristics of jet with fan positioned 1 metre away from point 0

Accessories

See accessories section.

HPX

Long cased axial fans with external motor

Long cased belt-driven axial fans with casing opening up to 180°.

Fan:

- Long casing with sheet steel twist-lock cap.
- Impellers made from cast aluminium
- Sealed transmission unit (IP66) with double retention system
- Airflow direction from motor to impeller
- Temperature of the air to transport: -25°C +120°C

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- IE3 efficiency motors for capacities equal to or over 7.5kW, except single-phase, 2 speed and 8 pole motors.
- Class F motors, with ball bearings, IP55 protection.
- Single-phase 230V-50Hz and three-phase 230/400V-50Hz (up to 4kW) and 400/690V-50Hz (power over 4kW)

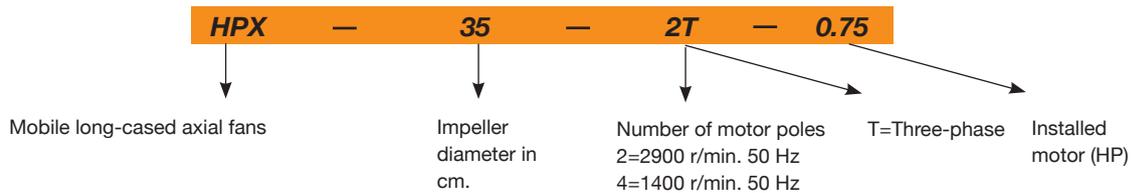

Finish:

- Anticorrosive finish in polyester resin polymerised at 190°C, after degreasing with phosphate-free nanotechnology treatment.

On request:

- IE2 and IE3 efficiency motors for any power.
- Airflow direction from impeller to motor
- 100% reversible impellers.
- Special windings for different voltages
- ATEX Certification, category 2 (see HPX/ATEX series)

HBA

Forked cased axial fans with motor outside the air flow

Forked cased fans for moving air of up to 150°C continuously and up to 200°C sporadically.

Fan:

- Sheet steel cased casing
- Impeller made from cast aluminium
- Airflow direction from impeller to motor

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- Class F motors, with ball bearings, IP-55 protection
- Three-phase 230/400V-50Hz. (up to 4kW) and 400/690V-50Hz. (power over 4kW)
- Fan working temperature: -25°C + 150°C

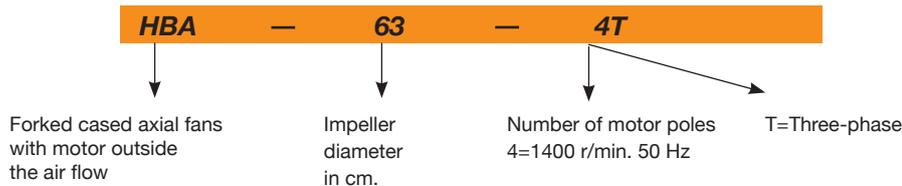

Finish:

- Anticorrosive with heat-protection paint for working in hot environments.

On request:

- Casing made from stainless steel
- Hot galvanised finish
- Special windings for different voltages and motors with PTC

Pe = Static pressure in mmH₂O, Pa and inwg.

HPX/SEC

Fans designed with the most advanced technology and experience to withstand extreme working conditions in ovens, driers and other applications with temperature and humidity

Fan:

- Thick sheet steel long casing with twist-lock cap.
- Impellers made from cast aluminium
- High-quality bearings with grease for high temperatures
- Bearing support with grease cups
- External grease cups in fan casing
- Airflow direction from motor to impeller

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- IE3 efficiency motors for capacities equal to or over 7.5kW, except single-phase, 2 speed and 8 pole motors
- Class F motors, with ball bearings, IP55 protection
- Single-phase 230V-50Hz and three-phase 230/400V-50Hz (up to 4kW) and 400/690V-50Hz (power over 4kW)
- Fan working temperature: -25°C +150°C

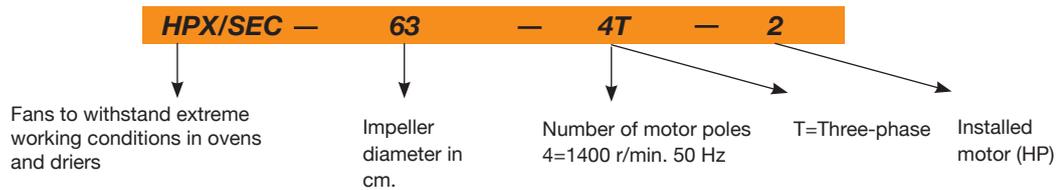

Finish:

- Anticorrosive in heat-resistant paint

On request:

- Airflow direction from impeller to motor
- 100% reversible impellers.
- Special windings for different voltages
- ATEX certification, Category 2 (HPX/ATEX)
- IE2 and IE3 efficiency motors for any power

Fans designed with the most advanced technology and experience to withstand extreme working conditions in wood and ceramic driers

Fan:

- Sheet steel bracket or stainless steel AISI304 depending on the version
- Impeller made from cast aluminium
- Airflow direction from motor to impeller

Motor version 65°C. 100% RH:

- Class F motors with ball bearings, especially designed for temperature, IP-55 protection
- Motors with forced ventilation
- Three-phase 230/400V50Hz. (up to 4kW) and 400/690V-50Hz. (power over 4kW)
- Fan working temperature: -10°C.+ 65°C. and 100%

Closed motors, without ventilation

- Three-phase 230/400V50Hz. (up to 4kW) and 400/690V-50Hz. (power over 4kW)
- Fan working temperature: -10°C.+ 135°C. and 100% relative humidity

Finish:

- Anticorrosive finish in polyester resin polymerised at 190°C, after degreasing with phosphate-free nanotechnology treatment.
- STAINLESS STEEL version with blast finish

Motor version 90°C. 100% RH:

- Class H motors with ball bearings, especially designed for high temperature, IP-55 protection
- Closed motors, without ventilation
- Three-phase 230/400V50Hz. (up to 3kW) and 400/690V-50Hz. (power over 3kW)
- Fan working temperature: -10°C.+ 90°C. and 100% relative humidity

On request:

- Any HCH Series model may be converted into HCH/SEC
- Airflow direction from impeller to motor
- 100% reversible impellers.
- Special windings for different voltages
- Support ring in AISI-316

Motor version 135°C. 100% RH:

- Class H motors with ball bearings, especially designed for very high temperatures, IP-55 protection
- Cast iron motor support shields
- Axle and screws in STAINLESS STEEL

VAM VAC

VAM: Axial fans with galvanised frame and IP65 motor
VAC: Axial fans for ducts with IP65 motor

Wall-mounted axial fans specially designed for use in farms and corrosive environments.

Fan:

- Airflow direction from motor to impeller
- Impeller in polyamide 6 reinforced with fibre glass
- VAM: Support frame in hot galvanised sheet steel
- VAM: Protection guard to prevent contacts according to standard UNE-EN ISO 12499:2010
- VAC: Hot-rolled galvanised steel construction

VAM

VAC

Motor:

- Class F motors with built-in thermal protector, ball bearings and IP65 protection
- Single-phase 220-240V.-50Hz. and three-phase 220-240/380-415V.-50Hz.
- Fan working temperature: -25°C+ 60°C, 4-6 pole motors

Finish:

- Hot galvanised anticorrosive

HGI

Large-diameter axial fan for farms

Wall-mounted axial fans designed for large, low-speed airflows with automatic louvre opening system.

Fan:

- Sheet steel base plate.
- Galvanised steel structure
- Galvanised sheet steel impeller
- Protection guard to prevent contacts according to standard UNE-EN ISO 12499:2010
- Designed especially for use in farms and hothouses
- Airflow direction from motor to impeller

Motor:

- IE2 efficiency motors for capacities equal to or over 0.75kW and below 7.5kW, except single-phase, 2 speed and 8 pole motors.
- Class F motors, with ball bearings, IP55 protection
- Three-phase 230/400V.-50Hz
- Fan working temperature: -25°C + 50°C

Finish:

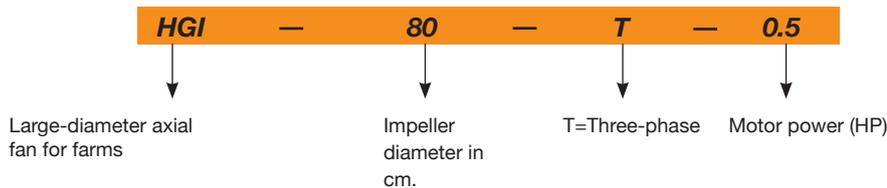

- Anticorrosive galvanized sheet steel

On request:

- Without shutter and with a protective grille on the impulsion side
- Special windings for different voltages

Order code

Acoustic features

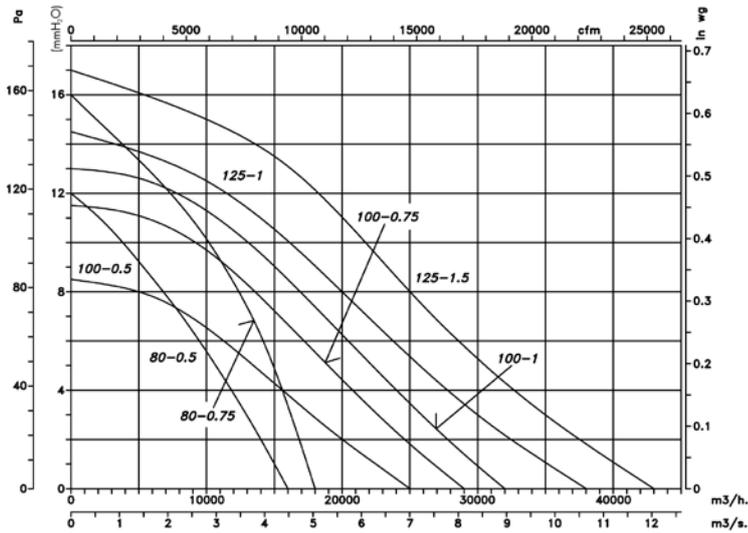

The specified values are determined according to free field measurements of pressure and sound levels in dB(A) at an equivalent distance of twice the fan's span plus the impeller's diameter, with a minimum of 1.5 m.

Sound power Lw(A) spectrum in dB(A) via frequency band in Hz.

KIT SOBREPRESIÓN

The system of pressurising staircases, escape routes or confined areas makes it possible to control the airflow automatically and to maintain a differential pressure of 50 Pa in a single stage, according to standard UNE EN 12101-6-2006.

STAIRWELL OVERPRESSURE KIT
Three-phase equipment

STAIRWELL OVERPRESSURE KIT

- Stairwell overpressure kit made up of control panel (BOXPRES KIT) and outlet units (CJHCH or CJBD), for the pressurisation of the stairwells and escape routes. Also available for single-phase equipment's NEOLINEO and CJBC.

OVERPRESSURE KIT WITH RESERVE FAN

- Overpressure kit with reserve fan, made up of control panel (BOXPRES KIT II), which incorporates a system of automatic switching to keep the overpressure in the case of a stop by the main fan and TWIN or CJHCH/DUPLEX air outlet units with reserve fan.

STAIRWELL OVERPRESSURE KIT
For single-phase equipment

BOXPRES

- Easy to install
- Compact and self-sufficient solution
- Preventive maintenance
- Easy starting
- Safe and functional installation

- The proper operation of the pressurisation systems depends not only on correct design but also on the proper regulation carried out by the system with the result that it is of vital importance to have calibrated and highly-precise regulation elements which make it possible to have the two situations in the case of fire, in a rapid and stable manner.
- The BOXPRES control panel, apart from satisfying the most demanding requirements, simplifies the work of the installer to the greatest possible extent.

Includes:

- Frequency inverter programmed to 50 Pa
- Differential pressure probe
- Magneto thermal
- Line LED and fault
- Check button

BOXPRES is a piece of equipment with all its interconnections made and tested

- Ready to work and carry out its duties on the pressure control of the installation.
- Possibility of checking the installation so as to prevent faults
- Only the power cable, the impulsion fan and the fire signal should be connected.

The panels for single-phase equipment include:

- Voltage regulator programmed to 50 Pa
- Differential pressure probe external to the equipment.

OVERPRESSURE KIT

Pressure connection

Example of use

Overpressure smoke control method; this system consists of pressurization by means of injecting air into spaces which are used as escape routes for people in case of fire, such as stair wells, passageways, corridors, elevators, etc. Above all in densely occupied tall buildings. This method is based on smoke control by means of the speed of air and the artificial barrier which is created by excess air pressure over smoke, so that it cannot enter escape routes.

HT

HT 25...63

HT 71...100

Roof-mounted axial extractor fans with flat bases

Roof-mounted axial extractor fans with fibreglass reinforced plastic rotor and flat base for installing on roof.

Fan:

- Painted, galvanised sheet steel support base.
- Fibreglass reinforced polyamide-6 rotors, except for 100 models which have 4 poles in aluminium.
- Bird control grille
- Rain cap made of painted galvanised sheet steel, with protection against corrosion.
- Motor-rotor airflow direction.

Motor:

- IE2 efficiency motors for powers equal to or greater than 0.75kW and lower than 7.5kW, except single-phase, 2-speed and 8-pole.
- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings, IP55 protection, except single-phase models from size 45 to size 63, IP54 protection.
- Single-phase 220-240V-50Hz and three-phase 220-240V/380-415V-50Hz (up to 4kW) and 400/690V-50Hz (powers greater than 4kW)
- Maximum temperature of air to be carried: -25°C +60°C

with phosphate-free nanotechnological treatment.

On request:

- IE2 and IE3 efficiency motors for all powers.
- Option of supply in the form of DISCHARGE FANS
- Rotors made of cast aluminium.
- Special windings for different voltages
- ATEX-certified Category 2

Finish:

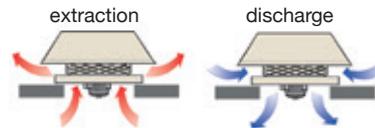

- Corrosion-proof finish of polyester resin polymerised at 190°C, previously degreased

Order code

- HT: Roof-mounted axial extractor fans with flat bases

Data on the best efficiency point of the internal fan

Acoustic characteristics

The indicated values are determined by measuring the pressure and noise level in dB(A) obtained in a free field at a distance of 6 m.

Noise power spectrum Lw(A) in dB(A) frequency band in [Hz]

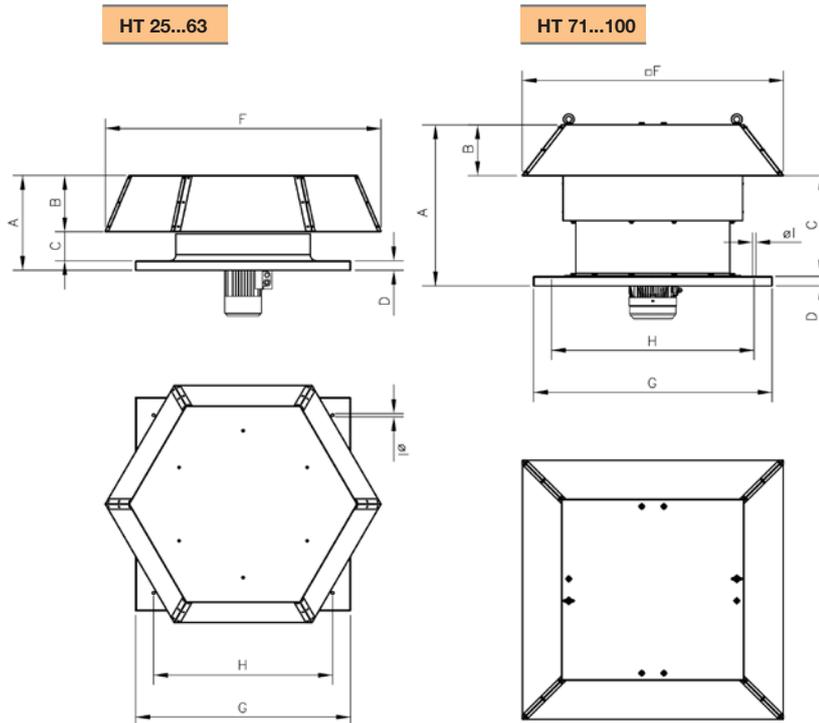

Values taken during aspiration with maximum flow rate (Qmax)

ROOF-MOUNTED AXIAL EXTRACTOR FANS

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

Accessories

HTTI

Roof-mounted axial extractor fans with inclined support

Roof-mounted axial extractor fans adapted to the roof inclination, with built-in safety switch.

Fan:

- Galvanised sheet steel support base
- Fibreglass reinforced polyamide-6 rotors
- Rain cap
- Motor-rotor airflow direction

Motor:

- IE2 efficiency motors for powers equal to or greater than 0.75kW and lower than 7.5kW, except single-phase, 2-speed and 8-pole.
- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings and IP55 protection.
- Three-phase 230/400V-50Hz (up to 4kW) and 400/690V-50Hz (higher powers than 4kW)
- Maximum temperature of air to be carried: -25°C +60°C

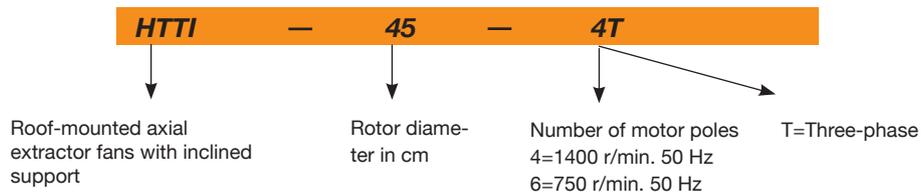

Finish:

- Corrosion-proof galvanised sheet steel

On request:

- IE2 and IE3 efficiency motors for all powers.
- All the required base inclinations and measurements (max. length 2m)
- Made of stainless steel plate.
- Special windings for different voltages
- ATEX-certified Category 2

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

ROOF-MOUNTED AXIAL EXTRACTOR FANS

HTMH

Multifunctional extractor fans for large flow rates

Roof-mounted multifunctional extractor fans with robust structures for extraction operations with large flow rates

Fan:

- Painted, galvanised sheet steel support base
- Cast aluminium orientable rotors
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499
- Painted, galvanised sheet steel rain cap, with natural air outlet.

Motor:

- IE2 efficiency motors for powers equal to or greater than 0.75kW and lower than 7.5kW, except single-phase, 2-speed and 8-pole.
- IE3 efficiency motors for powers equal to or greater than 0.75kW except single-phase, 2-speed and 8-pole.
- Class F motors with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model
- Three-phase 230/400V-50Hz (up to 4 kW) and 400/690V-50Hz (powers greater than 4 kW)
- Operating temperature: -25°C +50°C

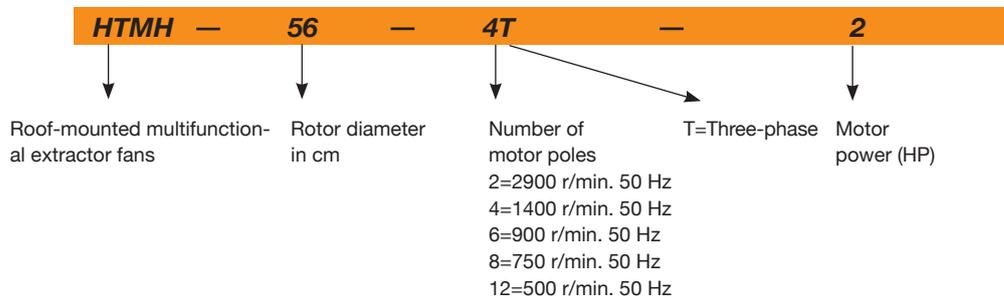

Finish:

- Corrosion-proof finish of polyester resin polymerised at 190°C, previously degreased with phosphate-free nanotechnological treatment.
- C4H quality surface finish

On request:

- ATEX and 2-speed motors
- Made entirely of stainless steel
- Made of hot-dip galvanised steel
- Marine motors for naval applications, certified for essential service in accordance with different classification entities (BV, DNV, LR)
- CE, NEMA, UL, CSA motors
- C5M quality surface finish
- IE2 and IE3 efficiency motors for all powers.

Order code

Technical characteristics

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

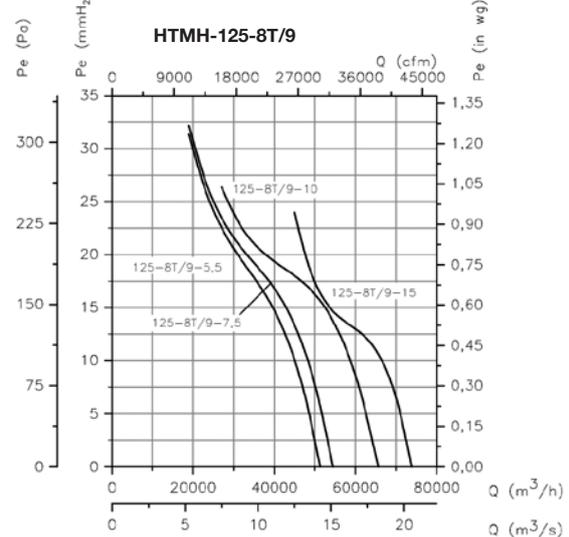

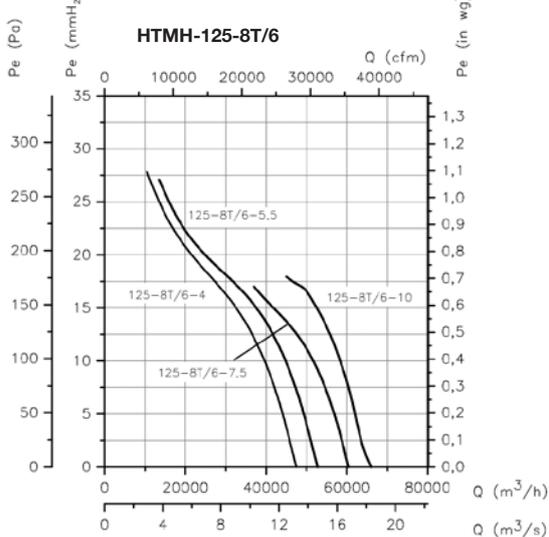

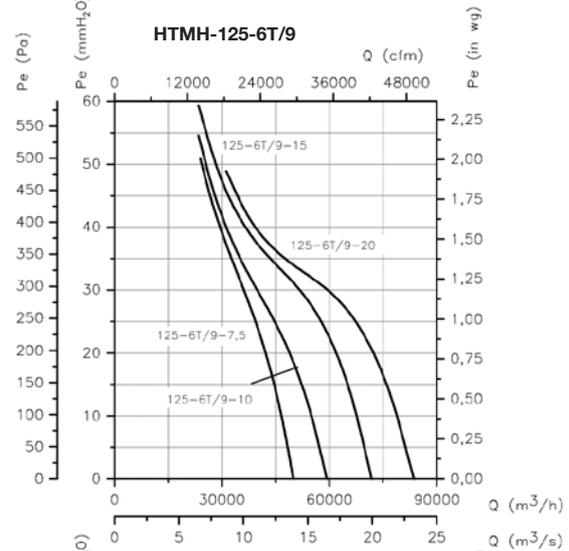

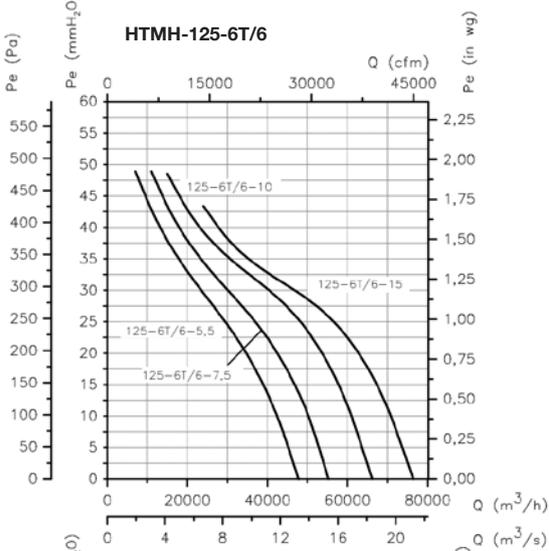

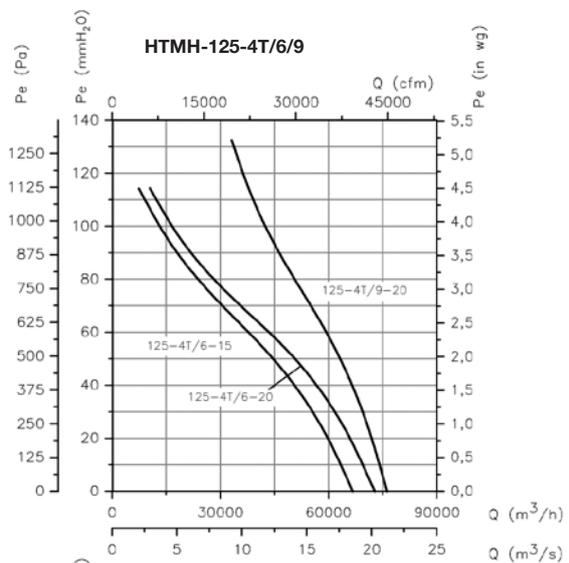

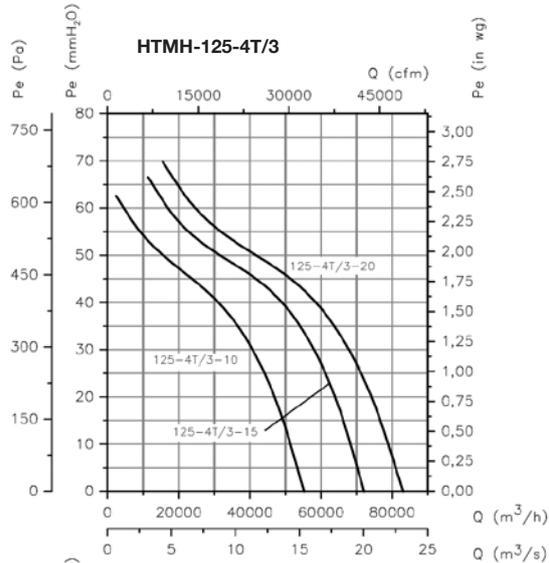

ROOF-MOUNTED AXIAL EXTRACTOR FANS

Characteristic curves

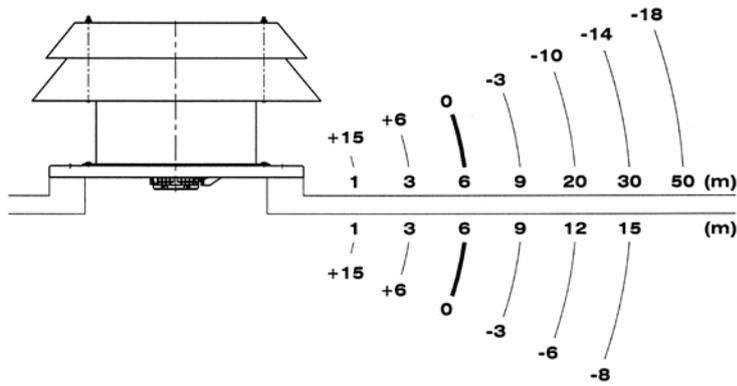

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

Sound pressure validation depending on distance

The noise level may vary depending on the roof or tile structure.

Accessories

ROOF-MOUNTED AXIAL EXTRACTOR FANS

HTMV

Roof-mounted axial extractor fans with vertical air outlet

Roof-mounted axial extractor fans with vertical air outlet, designed for extracting large air volumes in industrial or similar premises.

Fan:

- Galvanised sheet steel support base with corrosion-proof treatment.
- Cast aluminium orientable rotors.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Anti-return hatch in aluminium sheet metal to prevent the entry of water when the fan is not operating.
- Motor-rotor airflow direction.

Motor:

- Class F motors with ball bearings and IP55 protection
- IE3 efficiency motors for powers equal to or greater than 0.75kW
- Three-phase 230/400V.-50Hz (up to 4 kW) and 400/690V.-50Hz (powers greater than 4 kW)
- Maximum temperature of air to be carried: -20°C +40°C

Finish:

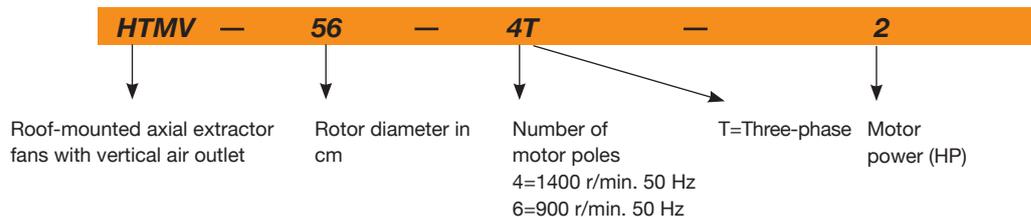

- Corrosion-proof finish of polyester resin polymerised at 190° C, previously degreased with phosphate-free nanotechnological treatment

On request:

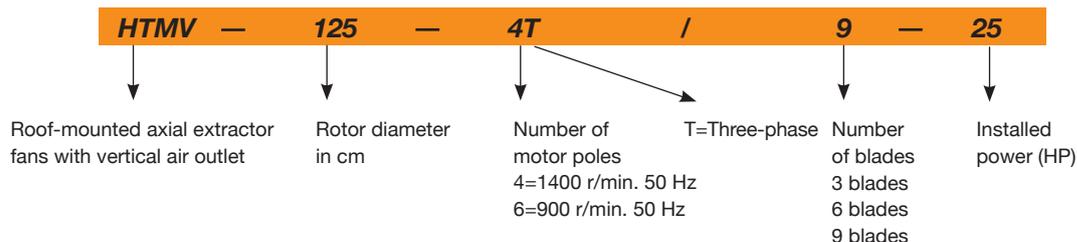

- Extractor fans with 2-speed motors
- 2 and 8-pole fans depending on diameter
- Special windings for different voltages and frequencies
- Made entirely of stainless steel
- Made of hot-dip galvanised steel

(1) The noise level values are pressures in dB(A) measured at a distance of 6 metres in a free field.

ROOF-MOUNTED AXIAL EXTRACTOR FANS

Acoustic characteristics

The indicated values are determined by measuring the pressure and noise level in dB(A) obtained in a free field at a distance of 6 m.

Noise power spectrum Lw(A) in dB(A) frequency band in [Hz]

Values taken during aspiration with maximum flow rate

ROOF-MOUNTED CENTRIFUGAL EXTRACTOR FANS

CRF

Roof-mounted centrifugal extractor fans, with low noise level

Roof-mounted centrifugal extractor fans with low noise level and external rotor motor.

Fan:

- Made of galvanised sheet steel.
- Turbine with reaction blades built of aluminium sheet metal except for models 225 and 250, which are made of galvanised sheet steel.
- Bird control grille.
- Folding body for ease of inspection and maintenance.

Motor:

- Class F motors, external rotor and IP54 protection.
- Single-phase 230V.-50/60Hz, except 450 and 500 230V.-50Hz models.
- Three-phase 400V.-50/60Hz, except 450 and 500 400V.-50Hz models.
- Maximum temperature of air to be carried: -25°C +50°C.

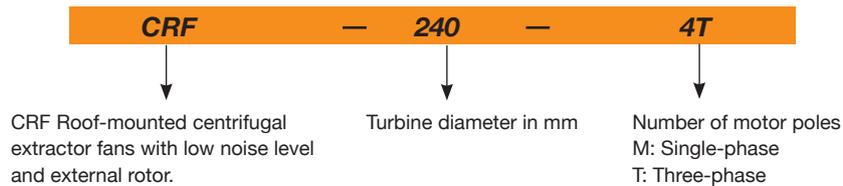

Finish:

- Corrosion-proof galvanised sheet steel.

On request:

- The variable speed drive (VSD) is supplied on request.

Roof-mounted centrifugal household chimney extractor fans

Roof-mounted centrifugal household chimney extractor fans with low noise level compliant with the Technical Building Code.

Fan:

- Sheet steel support base
- Turbine with reaction blades, made of sheet steel
- Rain cap made of galvanised sheet steel, with corrosion-proof protection.
- Adjustable by voltage change
- Safety switch provided on request

Motor:

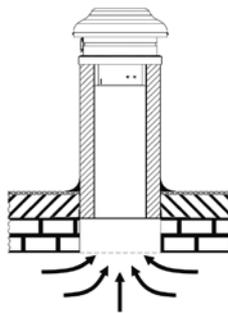

- Class F motors, external rotor and IP54 protection
- Single-phase 230V-50Hz
- Maximum temperature of air to be carried: -40°C +70°C

Finish:

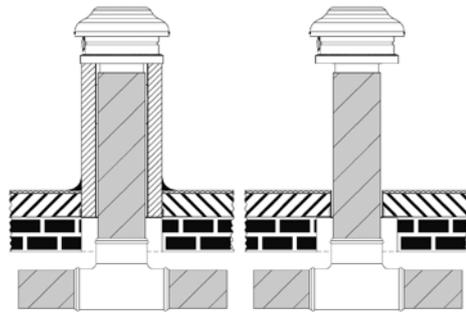

- Corrosion-proof finish of polyester resin polymerised at 190°C, previously degreased with phosphate-free nanotechnological treatment.

CA-ROOF

Roof-mounted centrifugal aspiration extractor fans for household chimneys

In-line centrifugal extractor fan with built-in rain cap for air extraction or impulsion in detached or community homes

- Designed for continuous operation in any position
- Can be supplied with a support base or attached directly to conduit, depending on model

Construction:

- Galvanised sheet steel support base
- Turbine with reaction blades
- Galvanised sheet steel rain cap
- With corrosion-proof protective paint

Motor:

- Motor with durable ball bearings and IPX4 protection
- Single-phase 230V, 50 Hz
- Operating temperature -20°C +50°C
- Automatic reset thermal switch

TIRACAMINO

Chimney and barbecue smoke extractor fans

- Designed specially for smoke extraction at temperatures of up to 200°C from chimneys and barbecues
- Fitted with an electronic regulator that adjusts the speed and flow rate of the extractor fan, depending on the real smoke extraction needs
- Designed for continuous operation at 200°C

Construction:

- Made of polyester resin sheet steel and resistant to atmospheric elements
- Bird control grille
- Supply voltage 230V 50 Hz

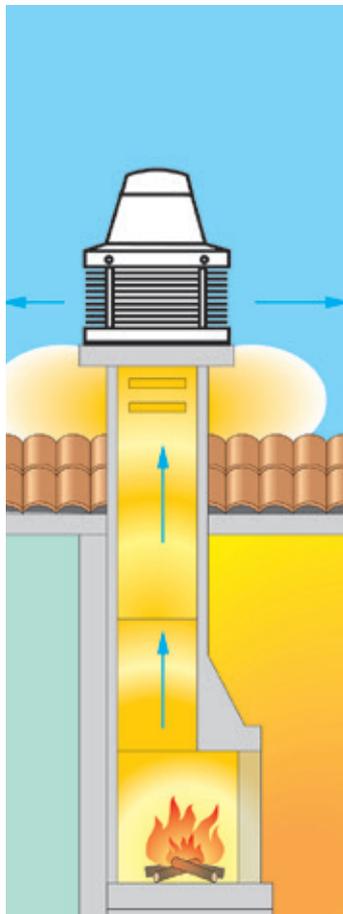

Motor:

- BASIC: operates with a switch or a separate controller

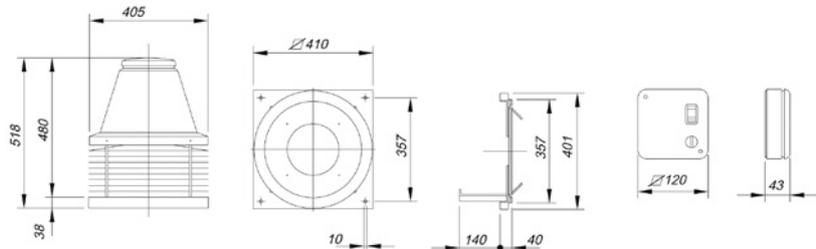

Technical characteristics

| Model | Speed (r/min) | Maximum admissible current (A) 230V | Absorbed power (W) | Maximum flow rate (m ³ /h) | Sound pressure level (*) dB(A) | Approx. weight (Kg) |

RCH

Chimney extractor fan and cap for hybrid extraction in community homes

- Specially designed for air extraction in detached or community homes through chimneys or community shunts. It gives the whole building a uniform, attractive appearance.
- The Venturi version is only for natural extraction, without an extractor fan.
- Its lightweight aluminium structure means it can easily and quickly be installed on the roof.

Construction:

- Made of pre-lacquered black aluminium that cannot be altered by atmospheric elements
- Slats specially designed to obtain a high-performance Venturi effect
- Supply voltage 230V 50 Hz

due to the Venturi effect

- TEMPERATURE: Designed for air extraction in homes and barbecues at temperatures of up to 150°C

On request:

- Measurements adapted to any chimney

Versions:

- BASIC: Operated with a switch or a SI-VENT wind controller
- VENTURI: Natural operation without a fan

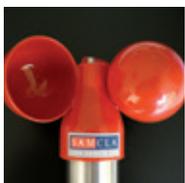

SI-VENT accessories

HYBRID VENTILATION SYSTEM (H.V.)

This system is based on natural air extraction when the external wind conditions are favourable and when they are unfavourable the extractor fan operates with an electric motor, guaranteeing the minimum necessary extraction.

The electric extractor fan is started up by wind control sensors specially designed for this application.

WIND CONTROLLER

SI-VENT, Wind sensor

The SI-VENT electronic wind controller is extremely sturdy and reliable. It is made up of a sensor, a controller and a power source.

The sensor is able to measure winds of up to 100 km/h and the controller starts up the electric fan when the wind speed remains below the minimum programmed speed for a period of 5 minutes.

RCH-400x800VM

Chimney extractor fan and cap for hybrid extraction in community homes

A unit specially designed for controlled mechanical extraction through chimneys or community shunts. The system enables a constant pressure to be maintained in the installation, with self-regulation of the extractor fan speed, obtaining the necessary flow rate at each given time, depending on the different needs of the installation, and achieving important energy savings.

- It gives the whole building a uniform, attractive appearance.
- Its lightweight aluminium structure means it can easily and quickly be installed on the roof.
- Measurements adapted to any chimney, on request.

Construction:

- Made of pre-lacquered black aluminium that cannot be altered by atmospheric elements.
- Slats specially designed to obtain a high-performance Venturi effect.
- Reaction blade turbine with external rotor motor.
- Adjustable 0-250Pa differential pressure transmitter with digital display and connection accessories.
- VSD1/A-RFM-0.5 frequency converter speed controller.

Motor:

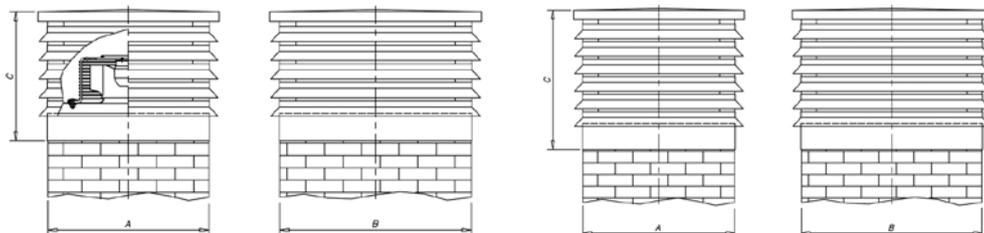

- Motor with durable ball bearings and IP54 protection
- Converter power, single-phase 230V 50 Hz, converter to motor output voltage three-phase 230V. 50Hz
- Operating temperature -20°C +50°C

Examples of operation

HTMF

400°C/2h (F-400) and 300°C/2h (F-300) rated roof-mounted multifunctional extractor fans

400°C/2h rated roof-mounted multifunctional extractor fans for work in fire risk zones, designed for smoke extraction in industrial or similar buildings

Fan:

- Painted, galvanised sheet steel support base
- Cast aluminium orientable rotors
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499
- Painted, galvanised sheet steel rain cap, with natural air outlet. Approved based on standard EN 12101-3:2002/AC:2006, with certificate no. 0370-CPR-0544

Motor:

- Class H motors, S1 continuous operation and S2 emergency use, with ball bearings, IP55 protection and with 1 or 2 speeds, depending on model
- Three-phase 230/400V-50Hz (up to 3kW) and 400/690V-50Hz (powers greater than 3kW)
- Maximum temperature of air to be carried: S1 continuous operation -20°C +40°C, S2 operation 300°C/2h, 400°C/2h

Finish:

- Corrosion-proof finish of polyester resin polymerised at 190°C, previously degreased with phosphate-free nanotechnological treatment.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

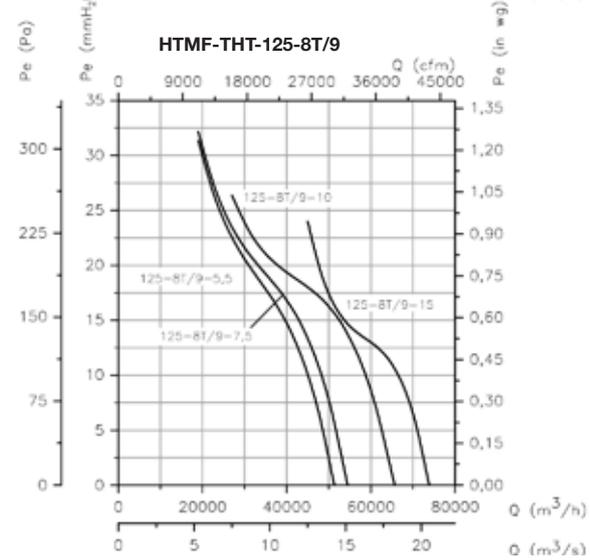

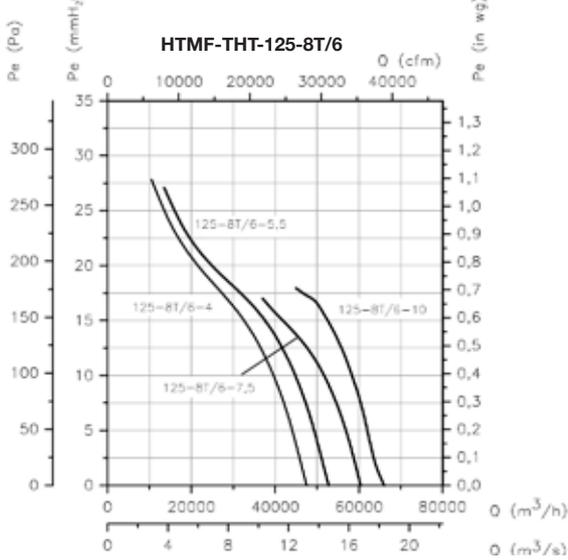

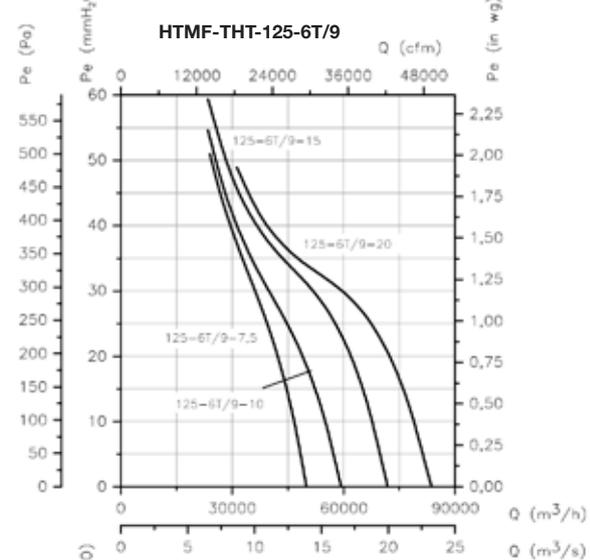

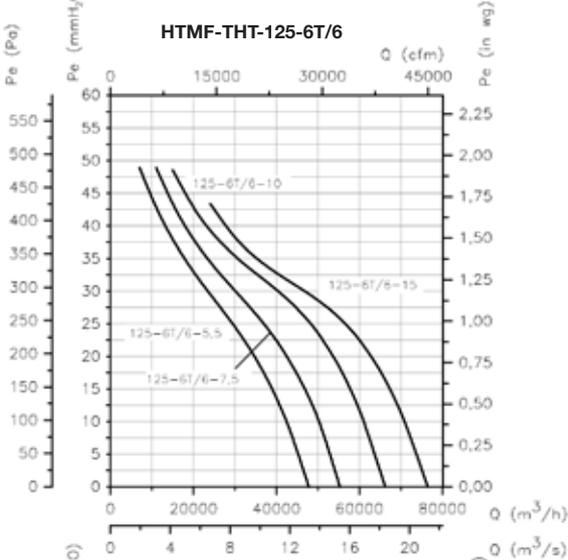

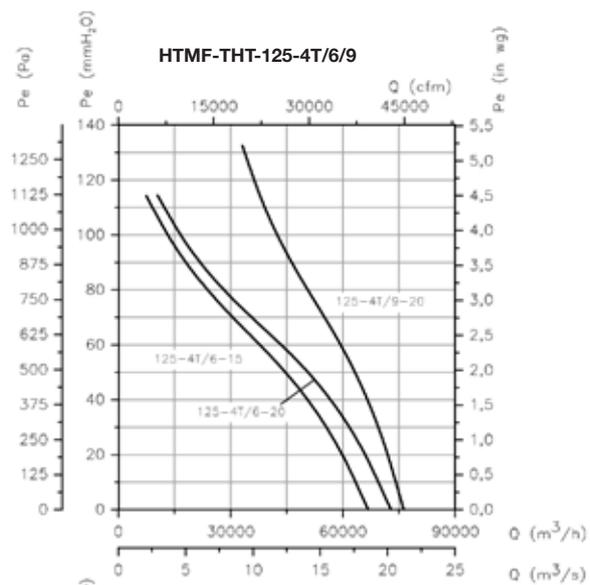

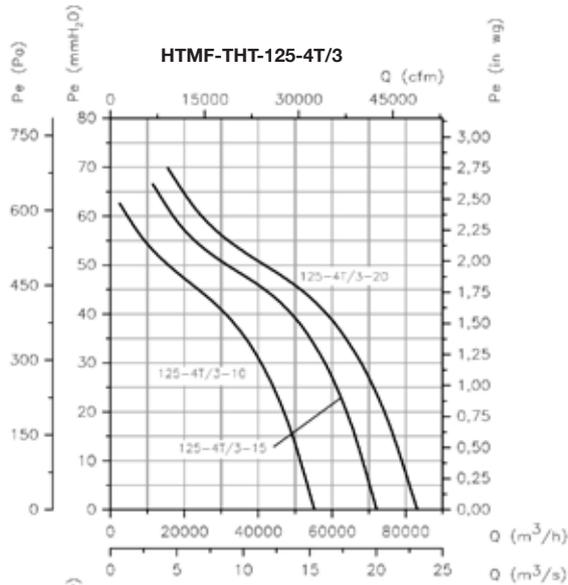

Pe= Static pressure in mmH₂O, Pa and inwg.

Characteristic curves

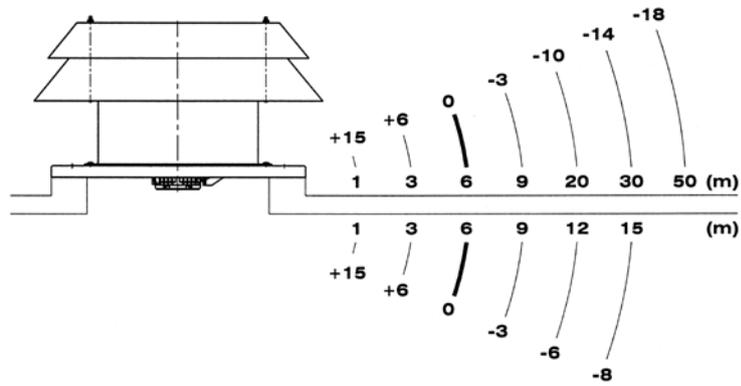

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

Sound pressure validation depending on distance

The noise level may vary depending on the roof or tile structure.

Accessories

See accessories section

THT/ROOF

400°C/2h and 300°C/2h roof-mounted axial extractor fans with vertical air outlet

Roof-mounted axial extractor fans with vertical air outlet, for work in fire risk zones, designed for smoke extraction in industrial or similar buildings.

Fan:

- Galvanised sheet steel support base with anti-corrosive treatment.
- Cast aluminium orientable rotors.
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499.
- Anti-return hatch in aluminium sheet metal to prevent the entry of water when the fan is not operating.
- Approved in accordance with standard EN 12101-3. With 0370-CPR-0305 (F400) and 0370-CPR-0973 (F300) certificates.
- Motor-rotor airflow direction.

Motor:

- Class H motors for S1 continuous operation and S2 emergency use. With ball bearings and class IP55 protection.
- Three-phase 230/400V.-50Hz. (up to 3 kW) and 400/690V.-50Hz. (powers greater than 3 kW)
- Maximum temperature of air to be carried: S1 continuous operation -20°C +40°C. S2 operation, 300°C/2h, 400°C/2h

Finish:

- Anti-corrosive finish of polyester resin polymerised at 190°C, previously degreased with phosphate-free nanotechnological treatment.

On request:

- Extractor fans with 2-speed motors.
- 2 and 8-pole fans depending on diameter.

(1) The noise level values are pressures in dB(A) measured at a distance of 6 metres in a free field.

Acoustic characteristics

Noise power spectrum Lw(A) in dB(A) per Hz frequency band.

Values taken during aspiration with maximum flow rate

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

40-4T

Recommended Motor Power kW(CV)

0.55(0.75)

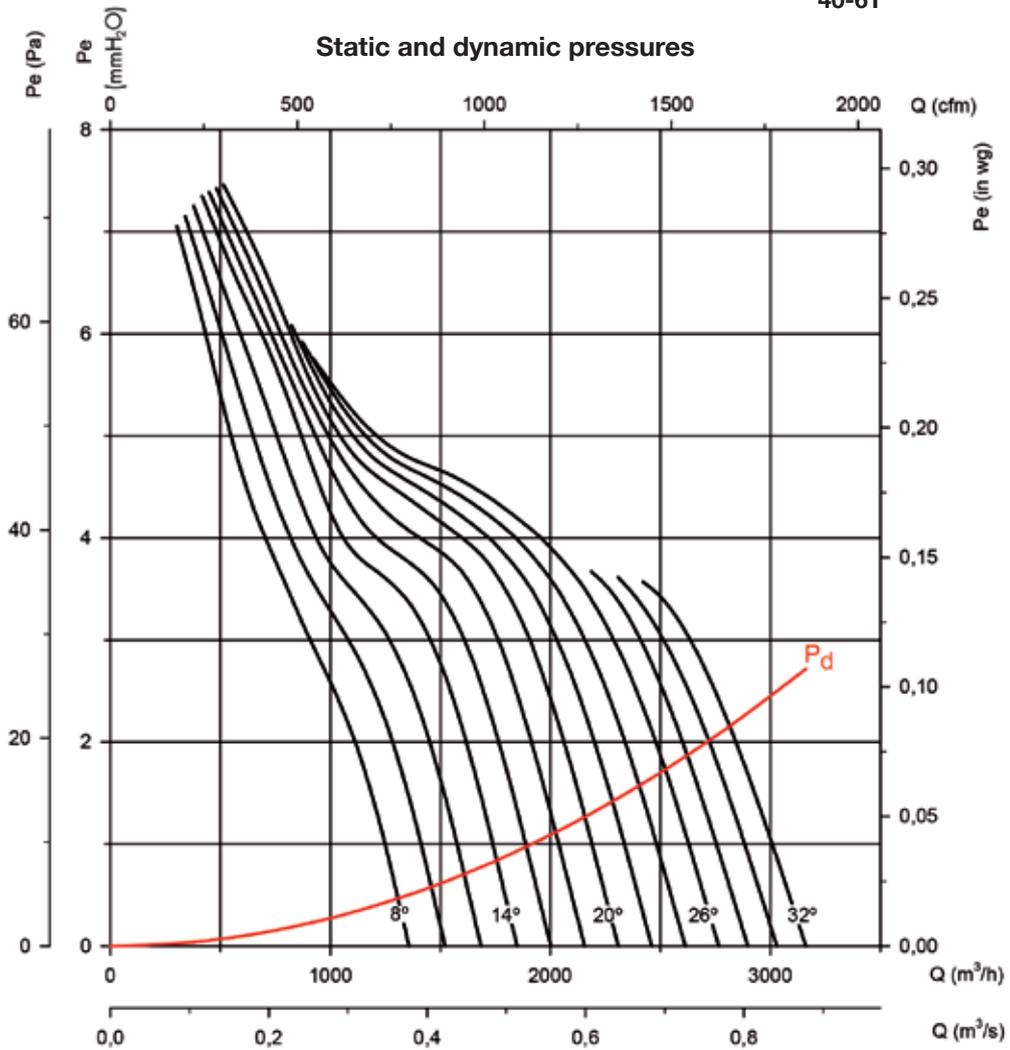

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

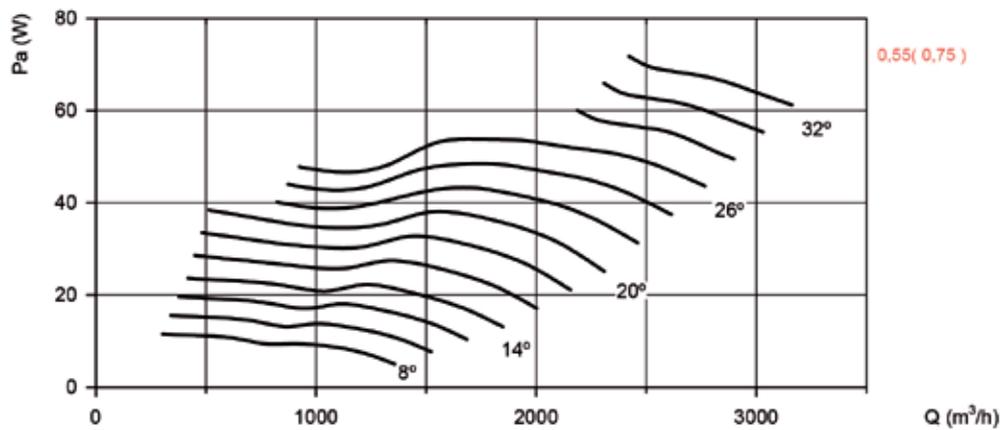

Pe= Static pressure in mmH₂O, Pa and inwg.

40-6T

Absorbed power

Recommended Motor Power kW(CV)

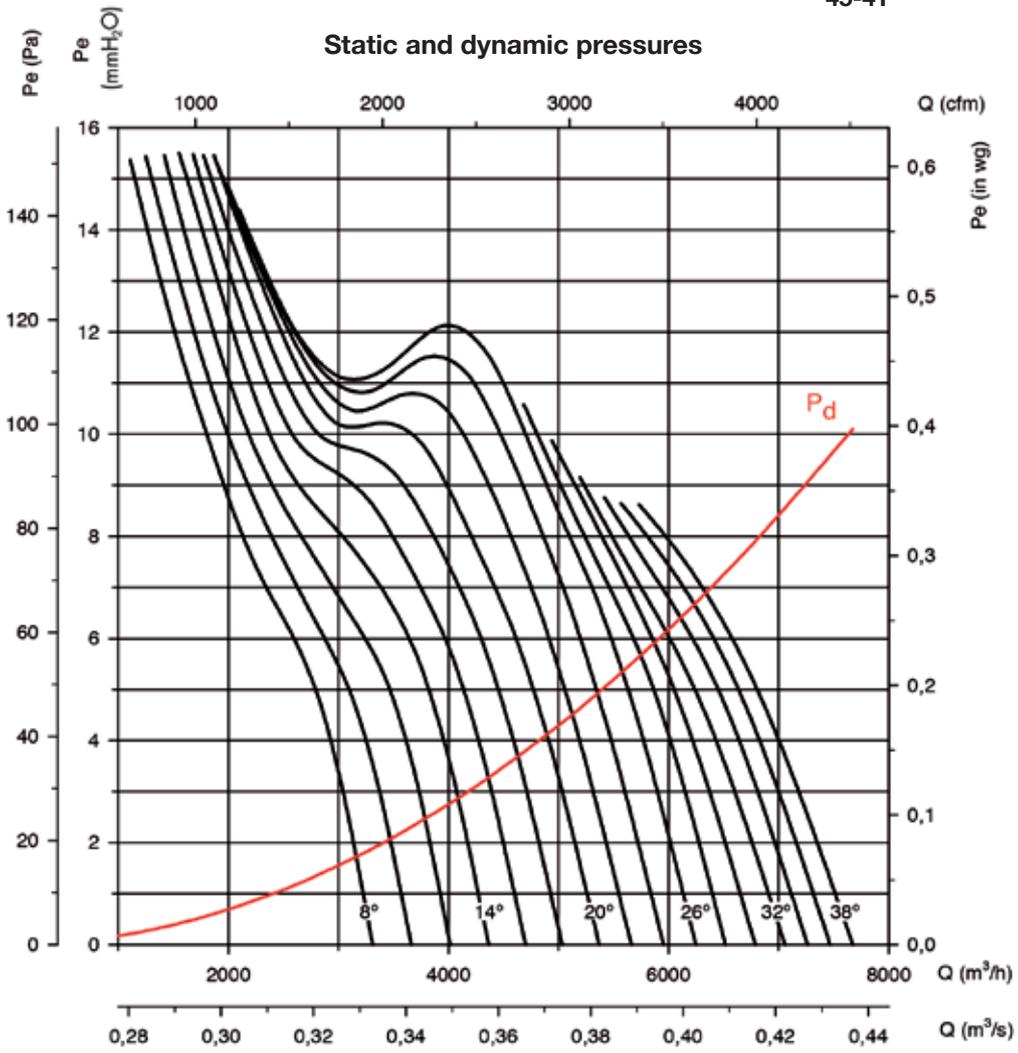

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

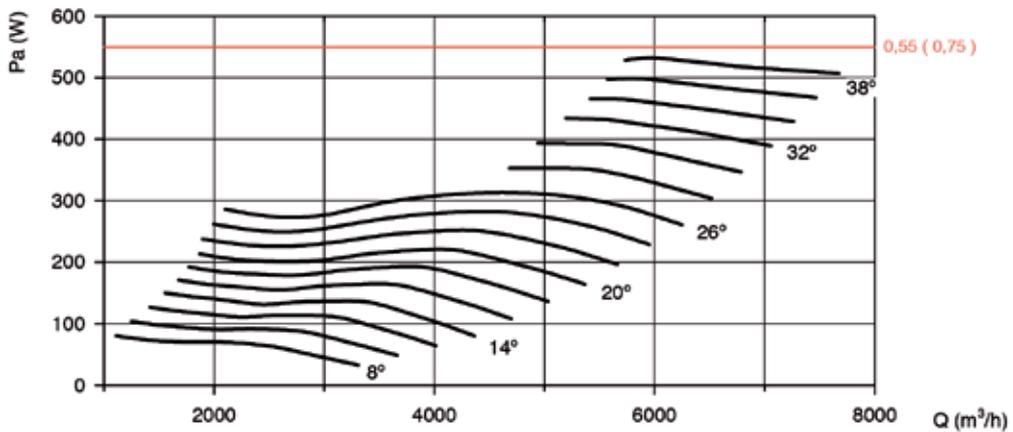

Pe= Static pressure in mmH₂O, Pa and inwg.

45-4T

Absorbed power

Recommended Motor Power kW(CV)

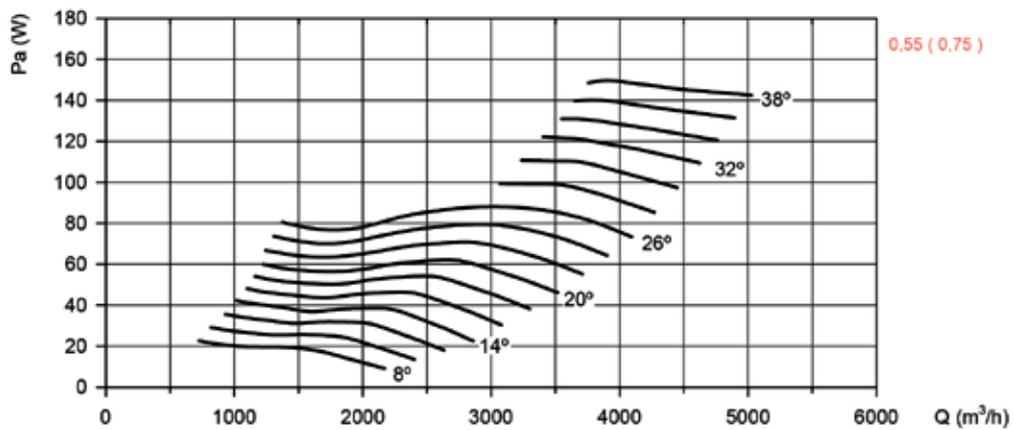

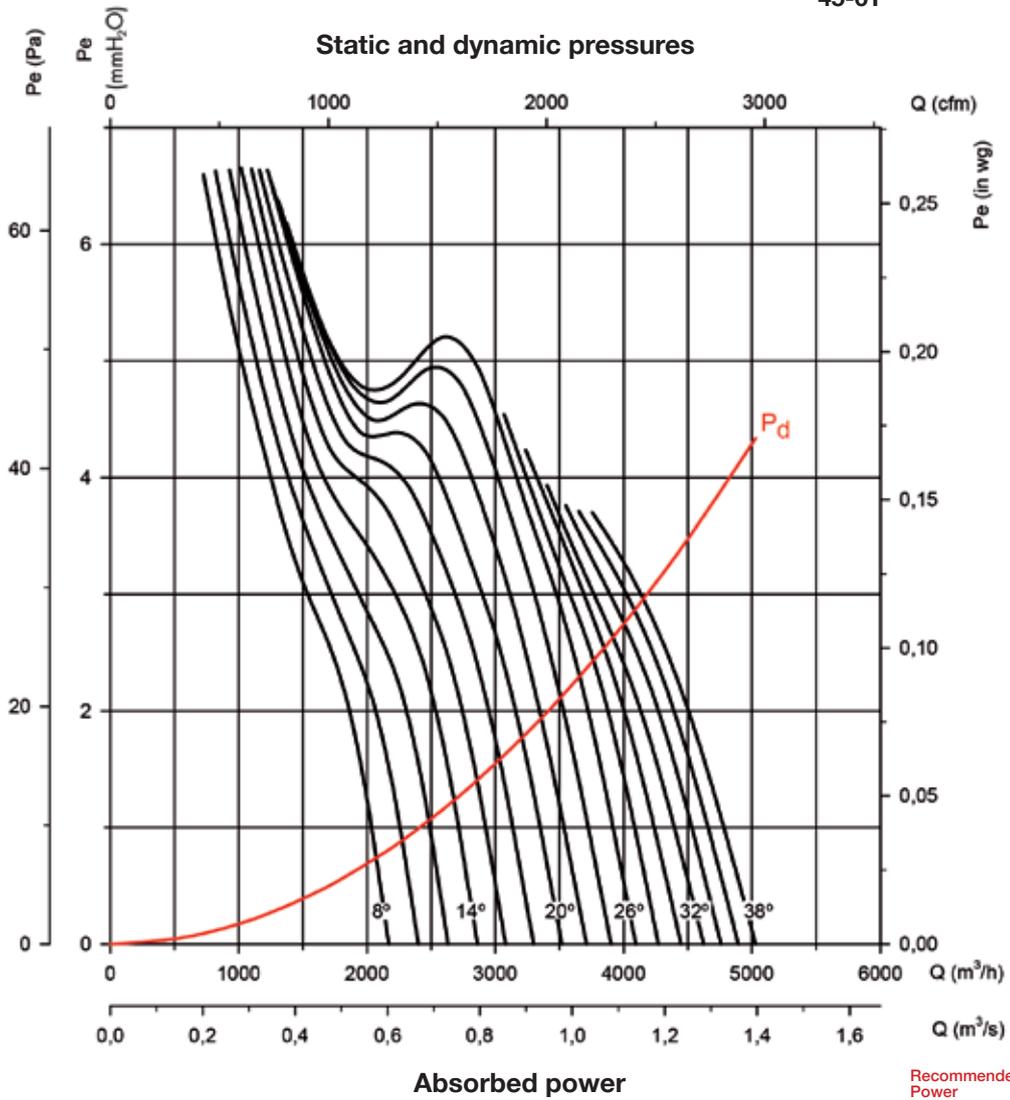

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

45-6T

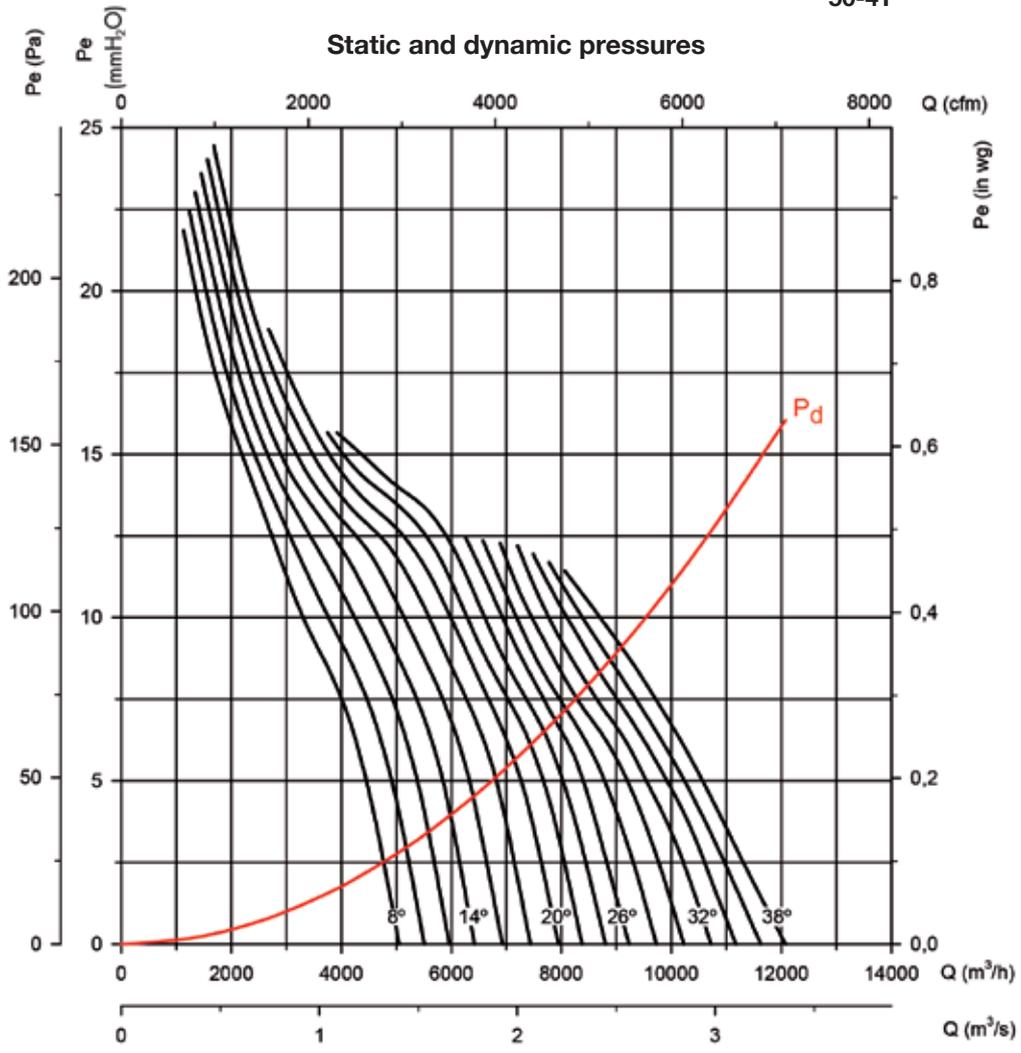

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

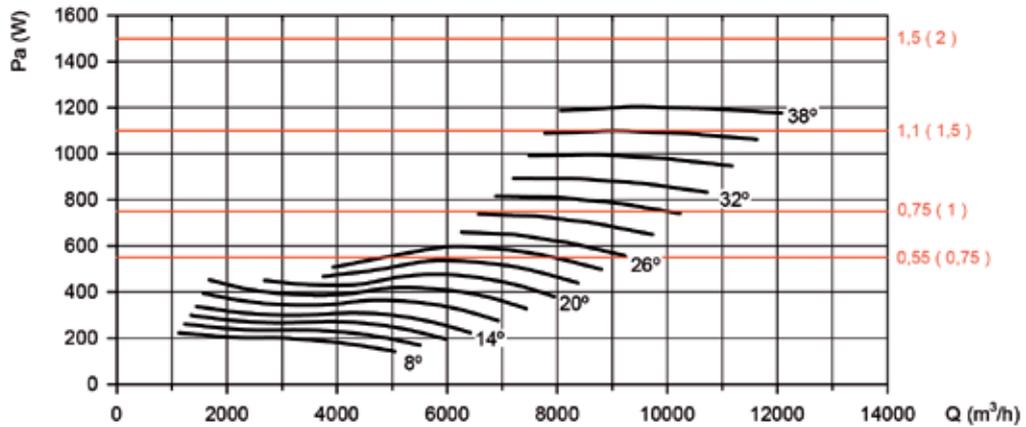

Pe= Static pressure in mmH₂O, Pa and inwg.

50-4T

Absorbed power

Recommended Motor Power kW(CV)

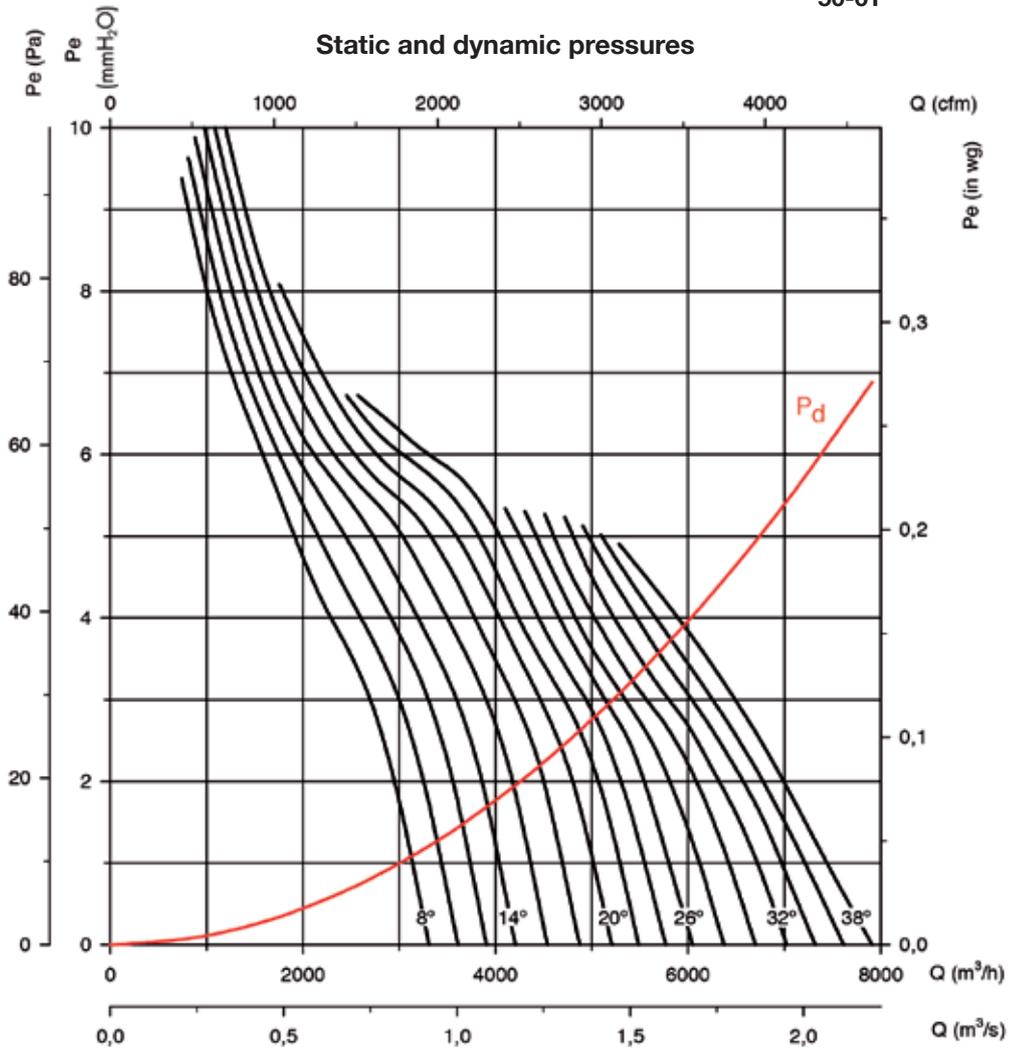

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

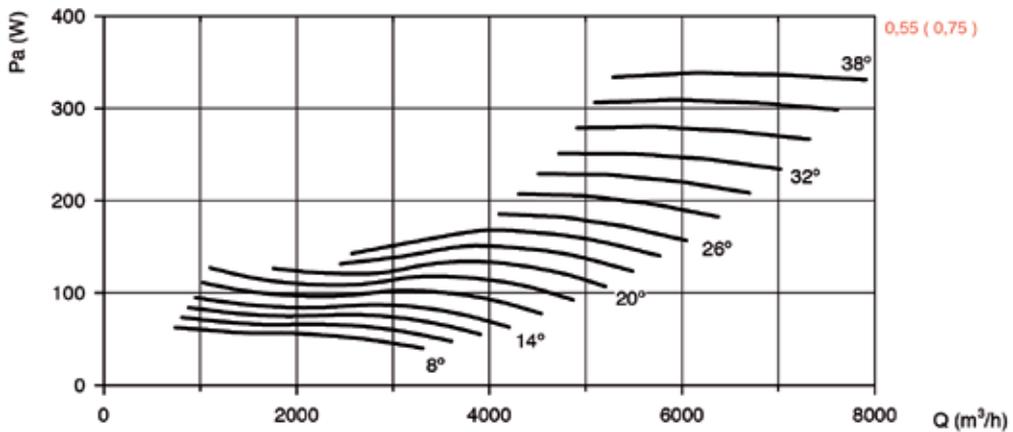

Pe= Static pressure in mmH₂O, Pa and inwg.

50-6T

Absorbed power

Recommended Motor Power kW(CV)

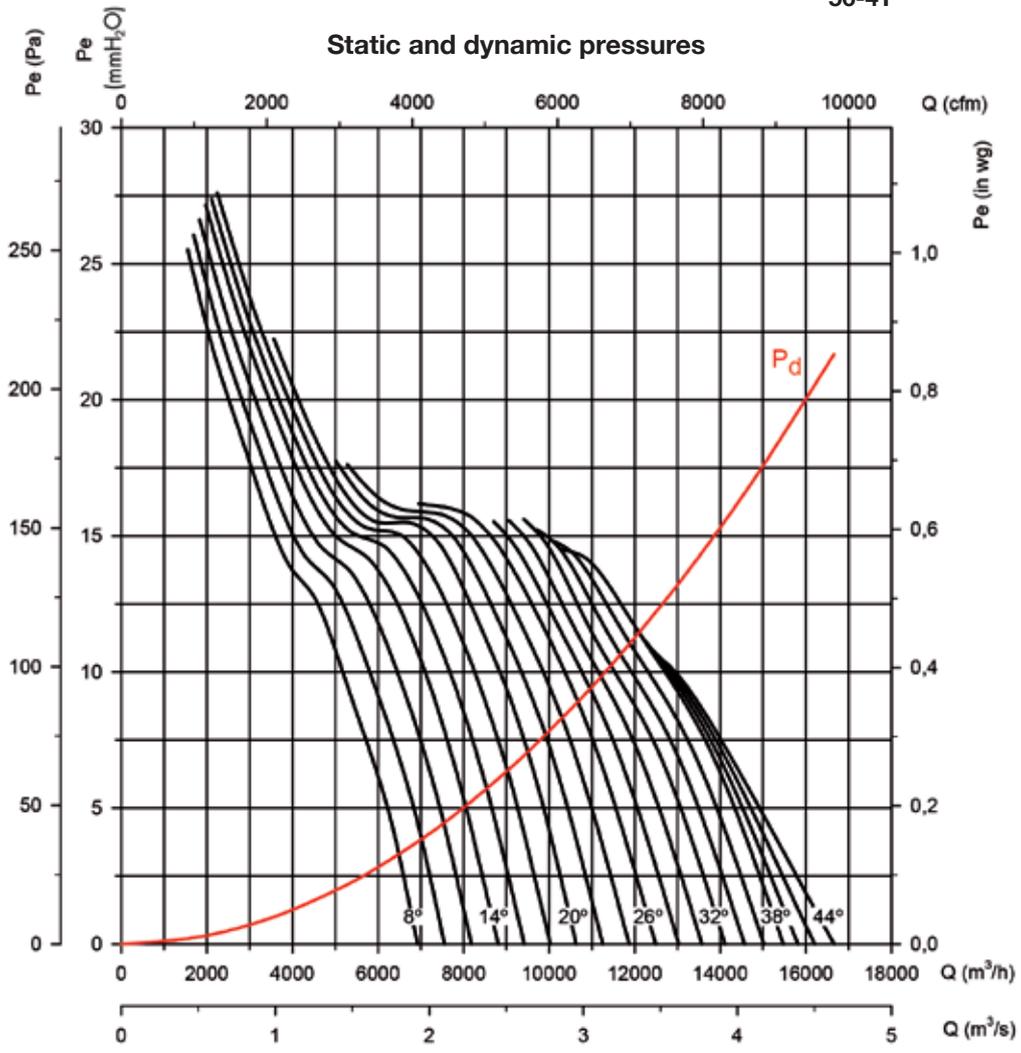

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

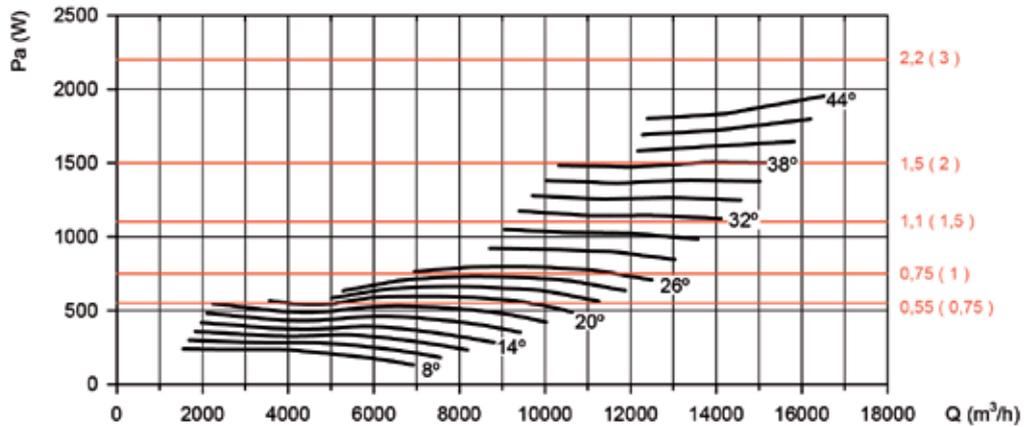

Pe= Static pressure in mmH₂O, Pa and inwg.

56-4T

Absorbed power

Recommended Motor Power kW(CV)

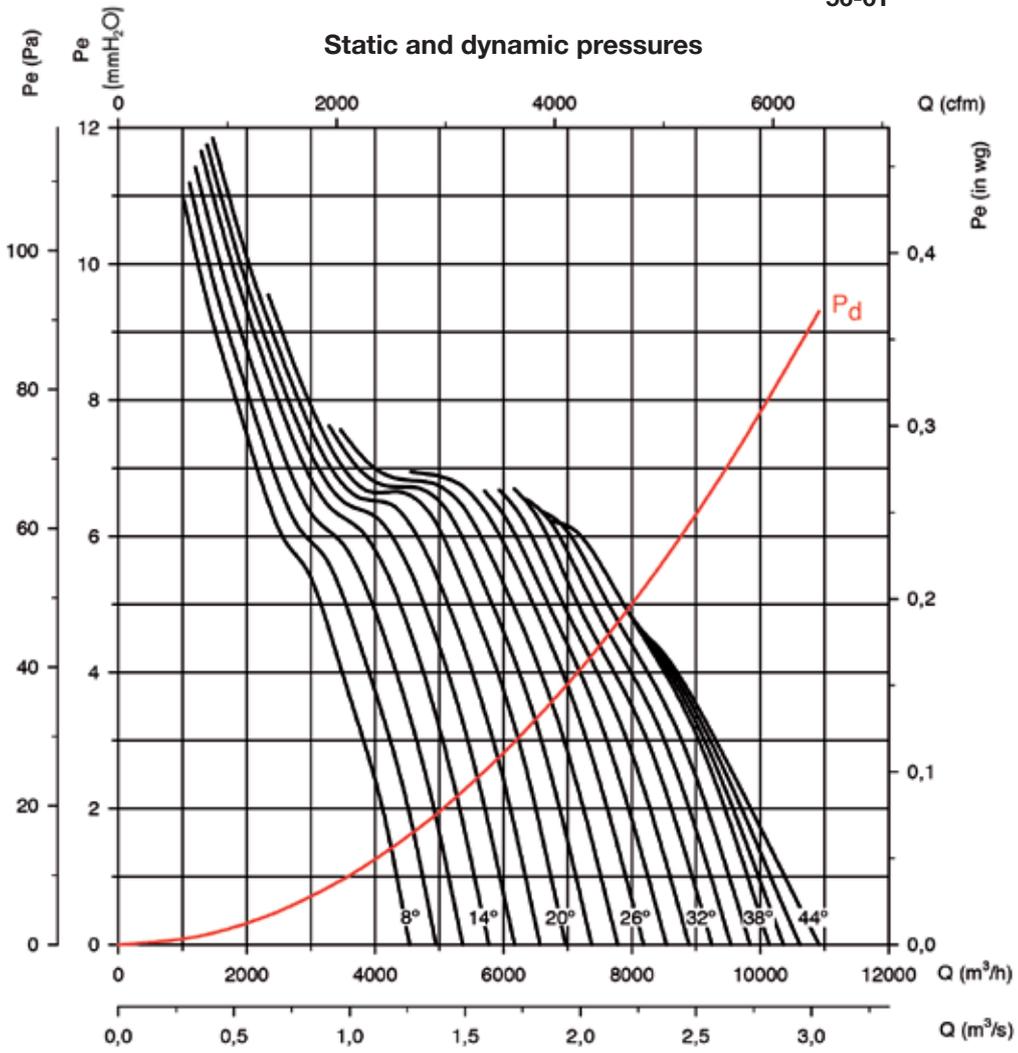

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

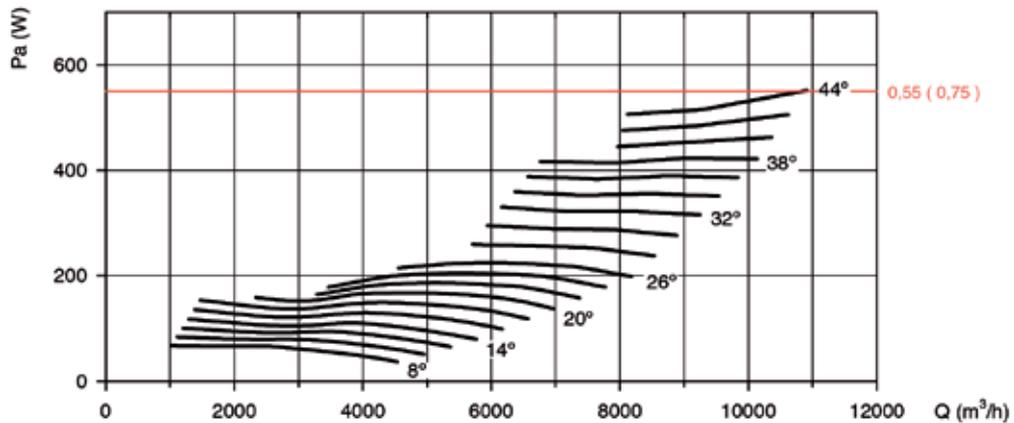

Pe= Static pressure in mmH₂O, Pa and inwg.

56-6T

Absorbed power

Recommended Motor Power kW(CV)

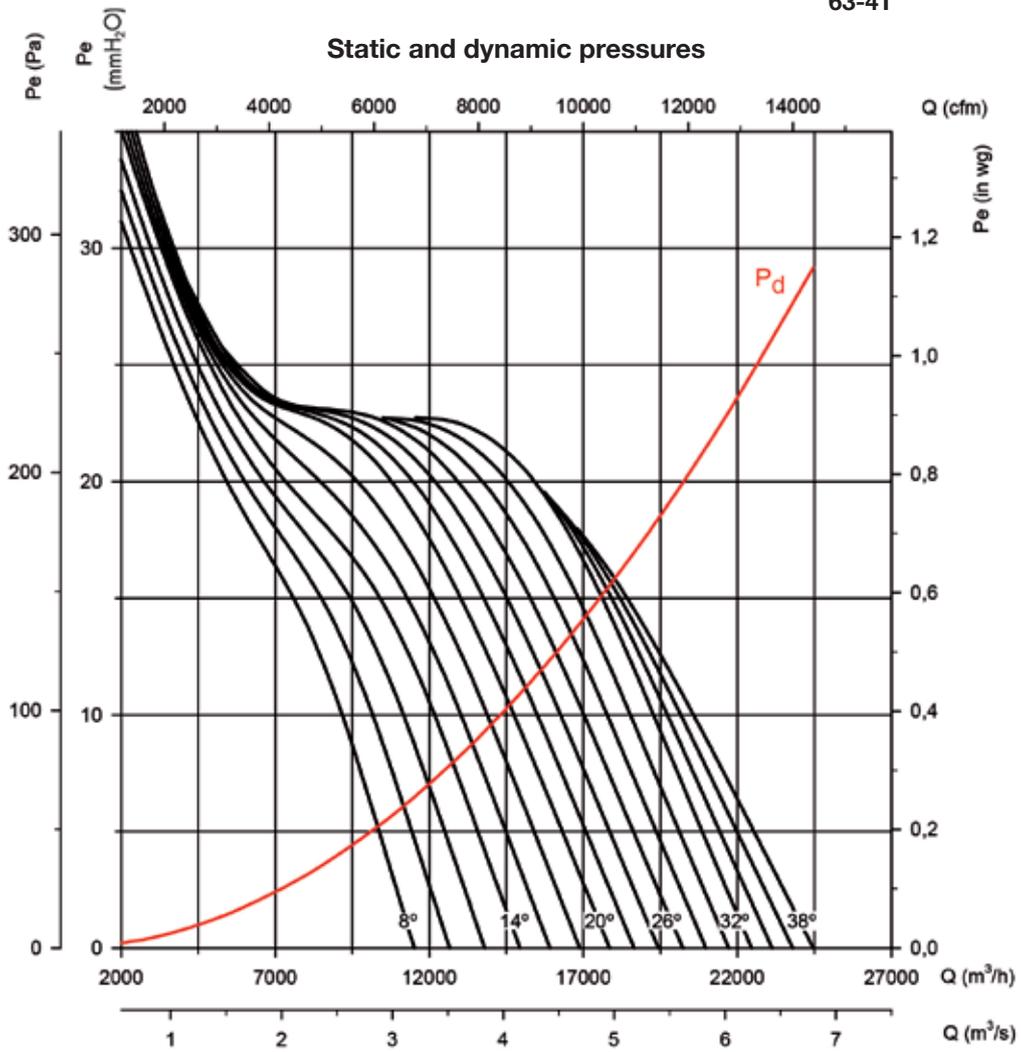

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

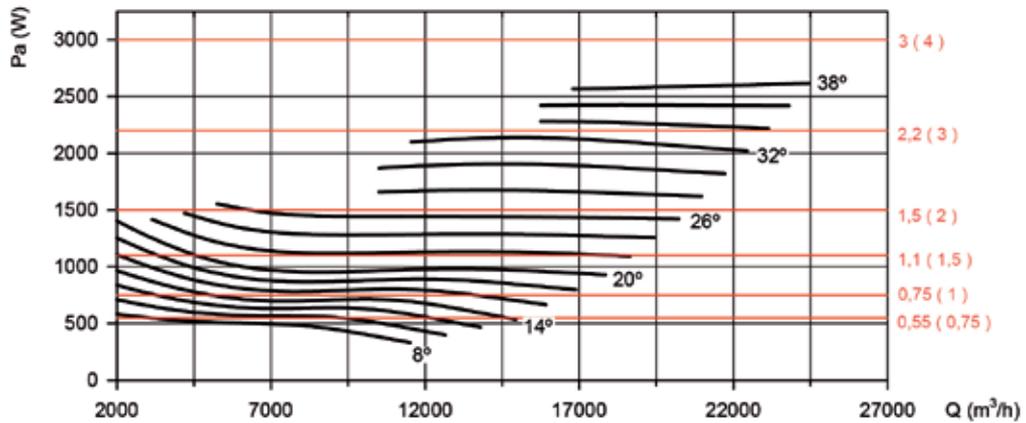

Pe= Static pressure in mmH₂O, Pa and inwg.

63-4T

Absorbed power

Recommended Motor Power kW(CV)

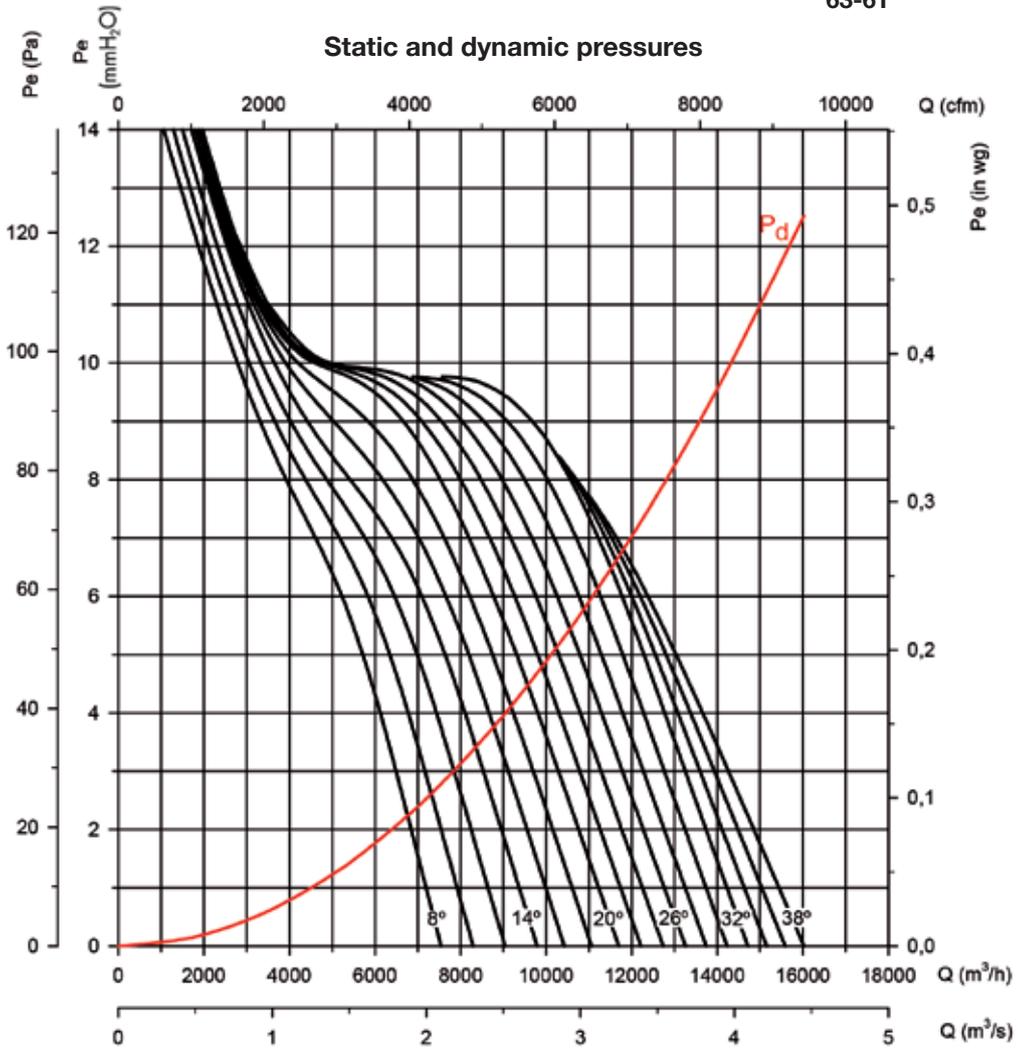

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

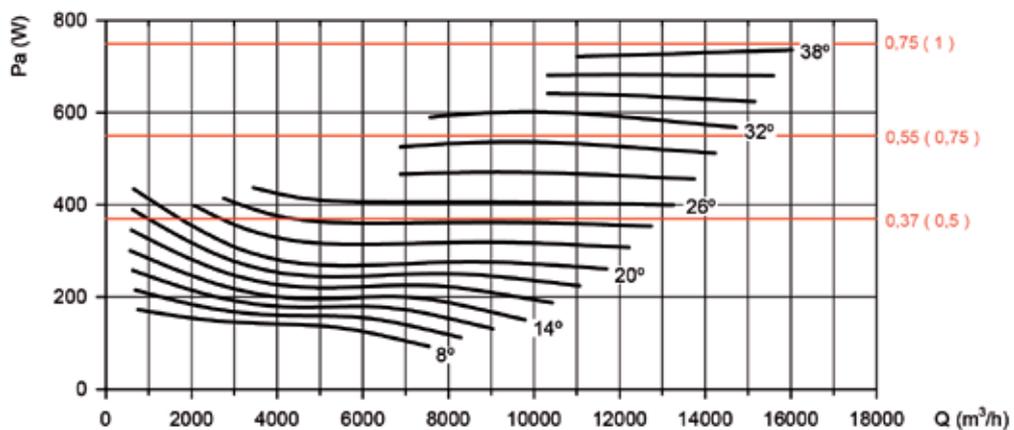

Pe= Static pressure in mmH₂O, Pa and inwg.

63-6T

Absorbed power

Recommended Motor Power kW(CV)

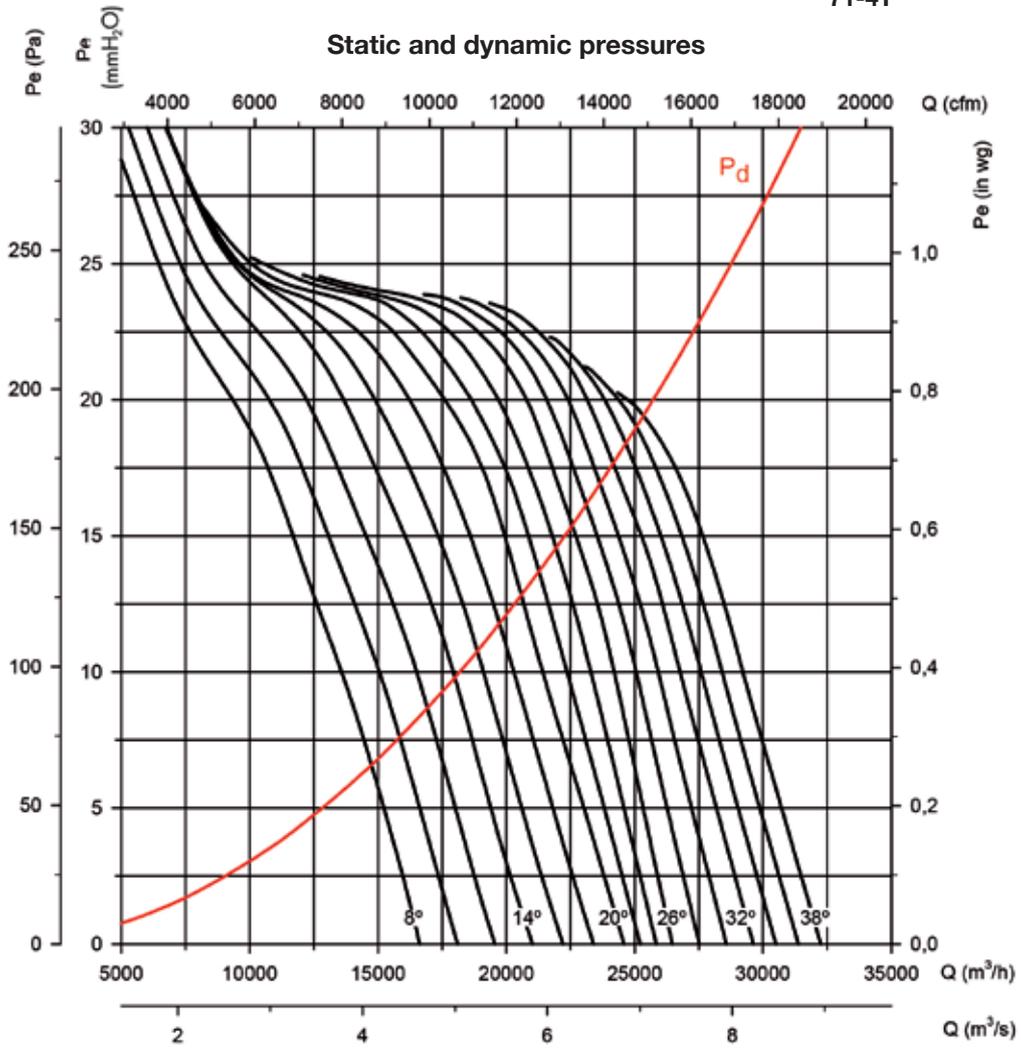

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

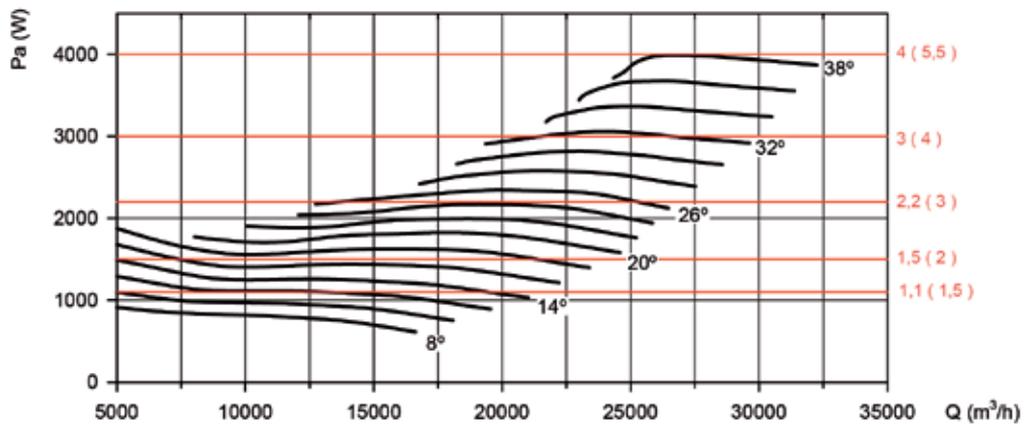

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

71-4T

Recommended Motor Power kW(CV)

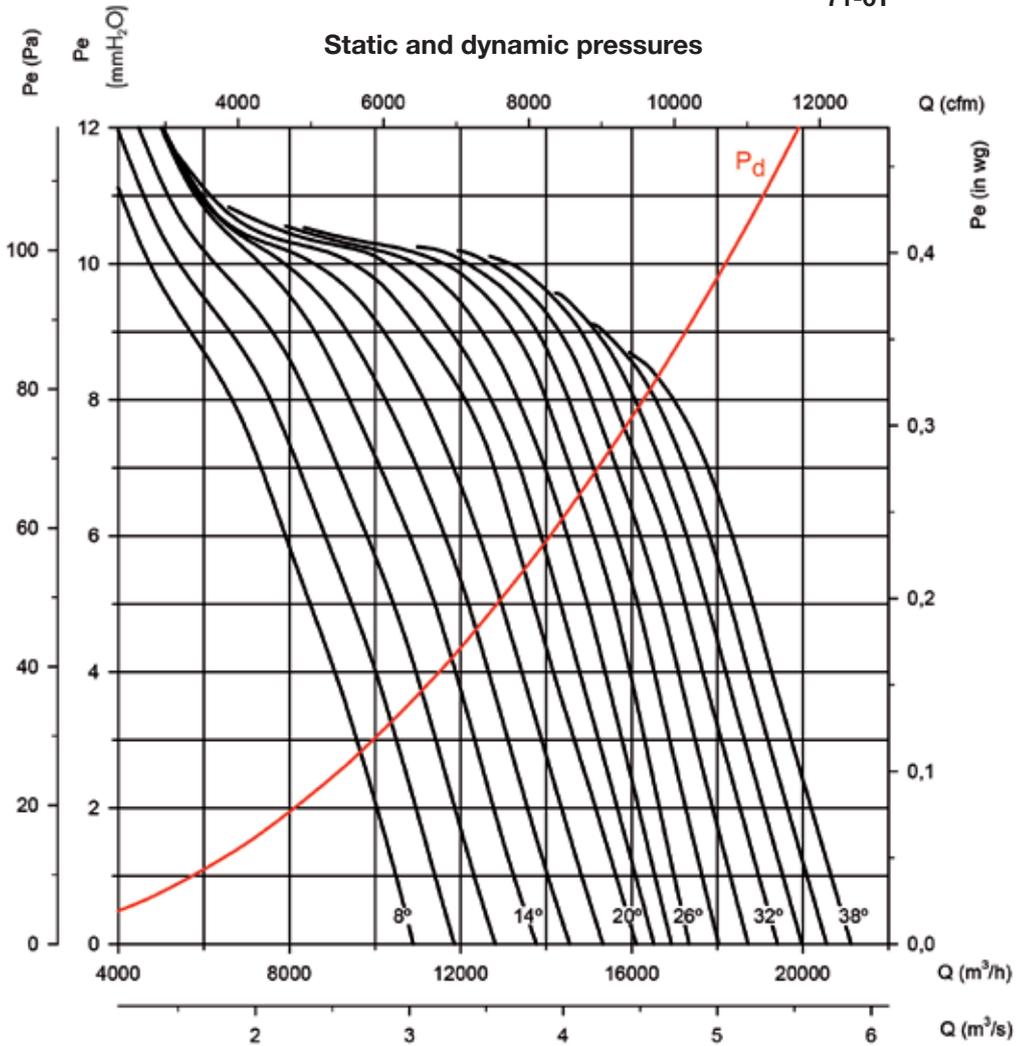

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

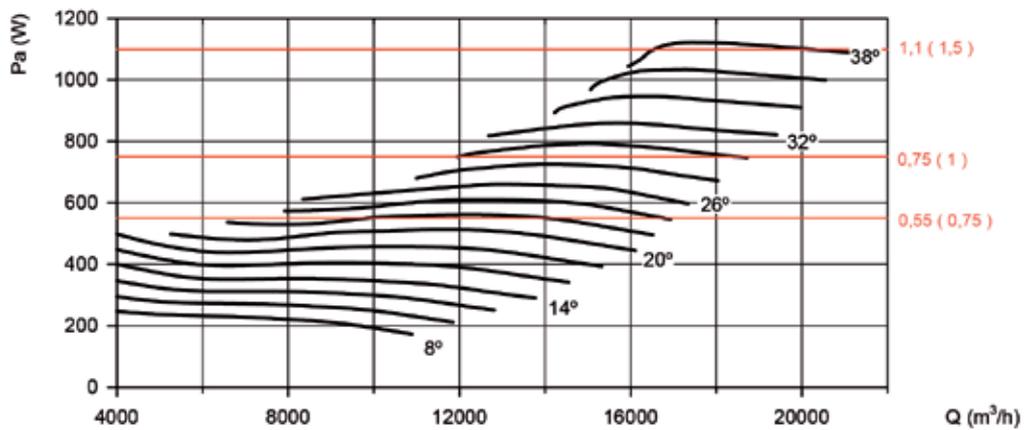

Pe= Static pressure in mmH₂O, Pa and inwg.

71-6T

Absorbed power

Recommended Motor Power kW(CV)

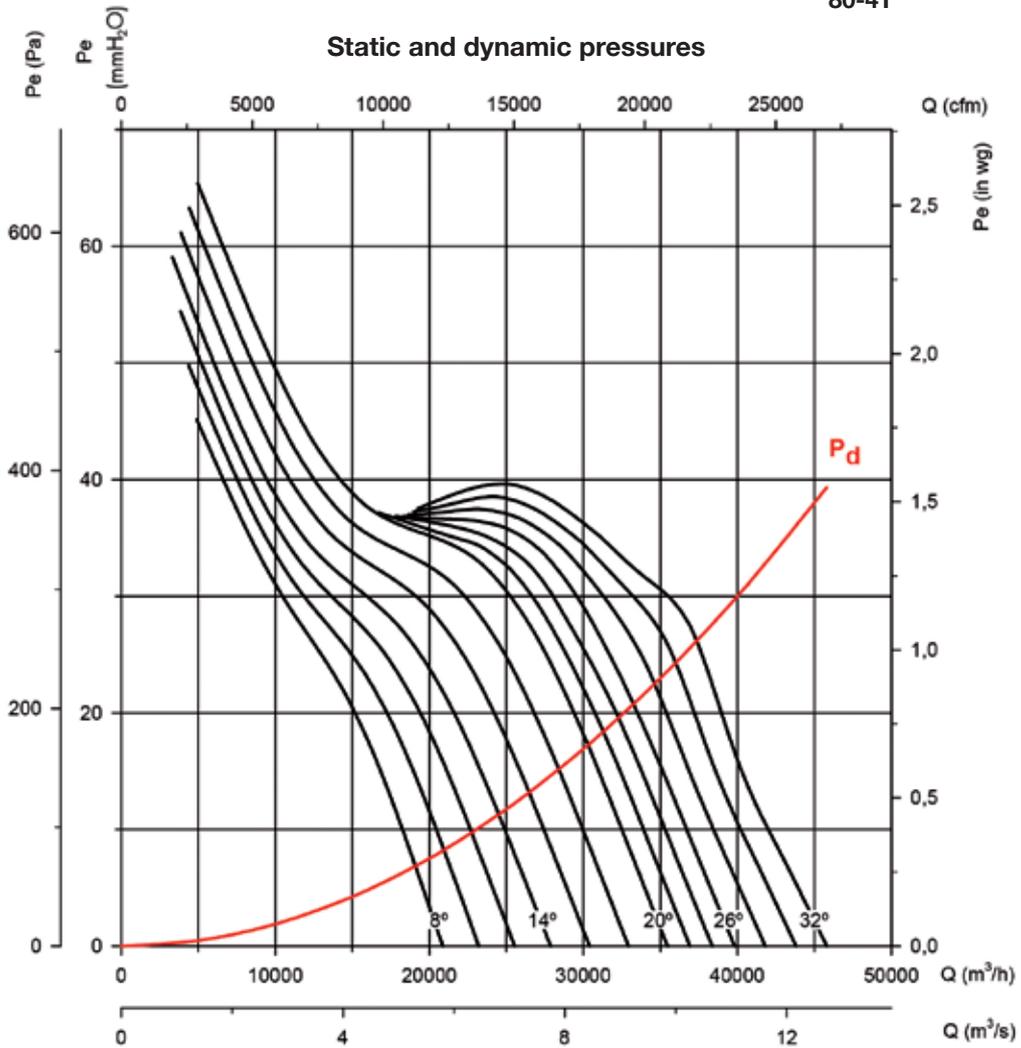

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

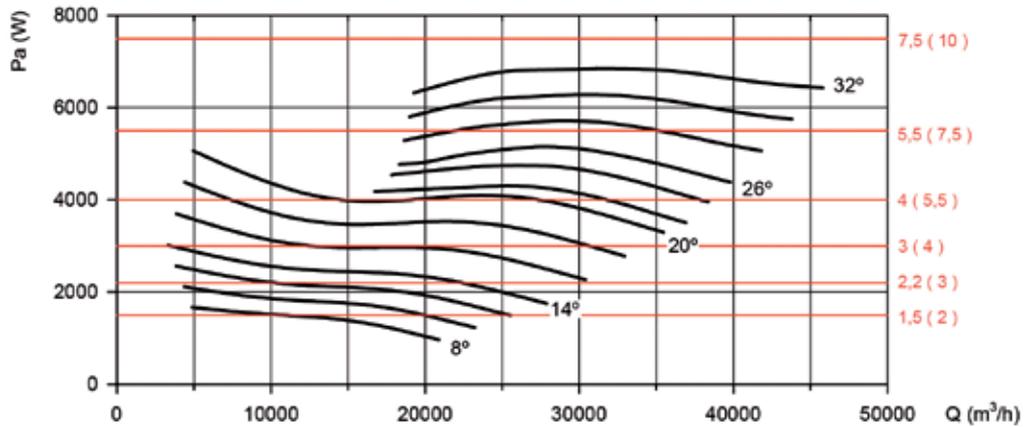

Pe= Static pressure in mmH₂O, Pa and inwg.

80-4T

Absorbed power

Recommended Motor Power kW(CV)

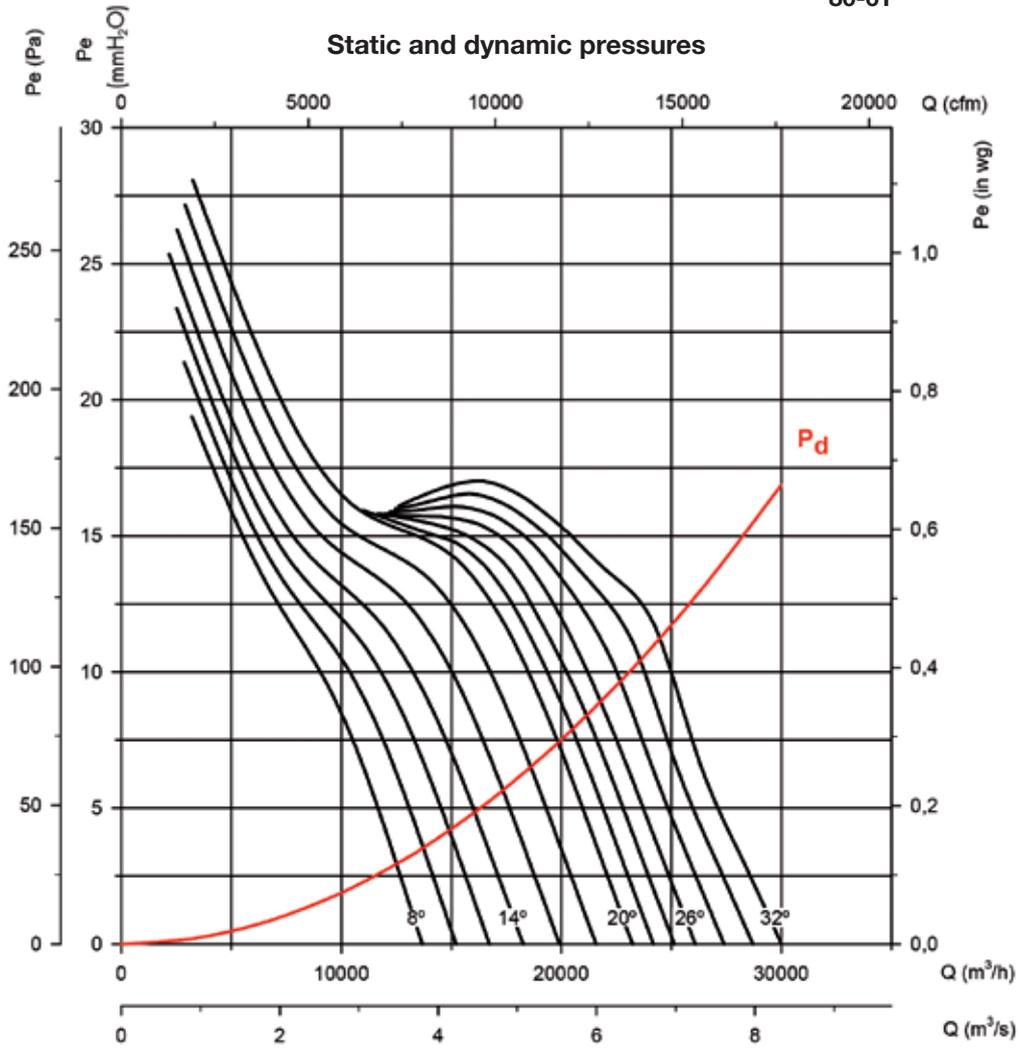

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

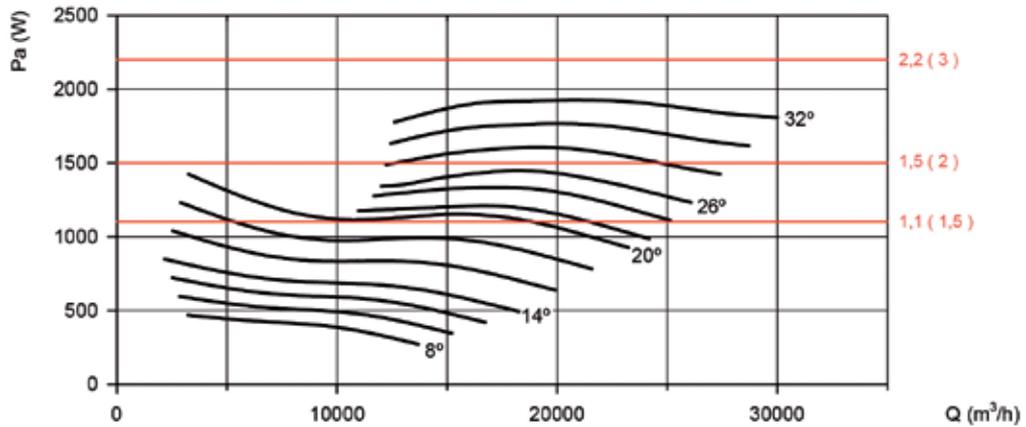

Pe= Static pressure in mmH₂O, Pa and inwg.

80-6T

Absorbed power

Recommended Motor Power kW(CV)

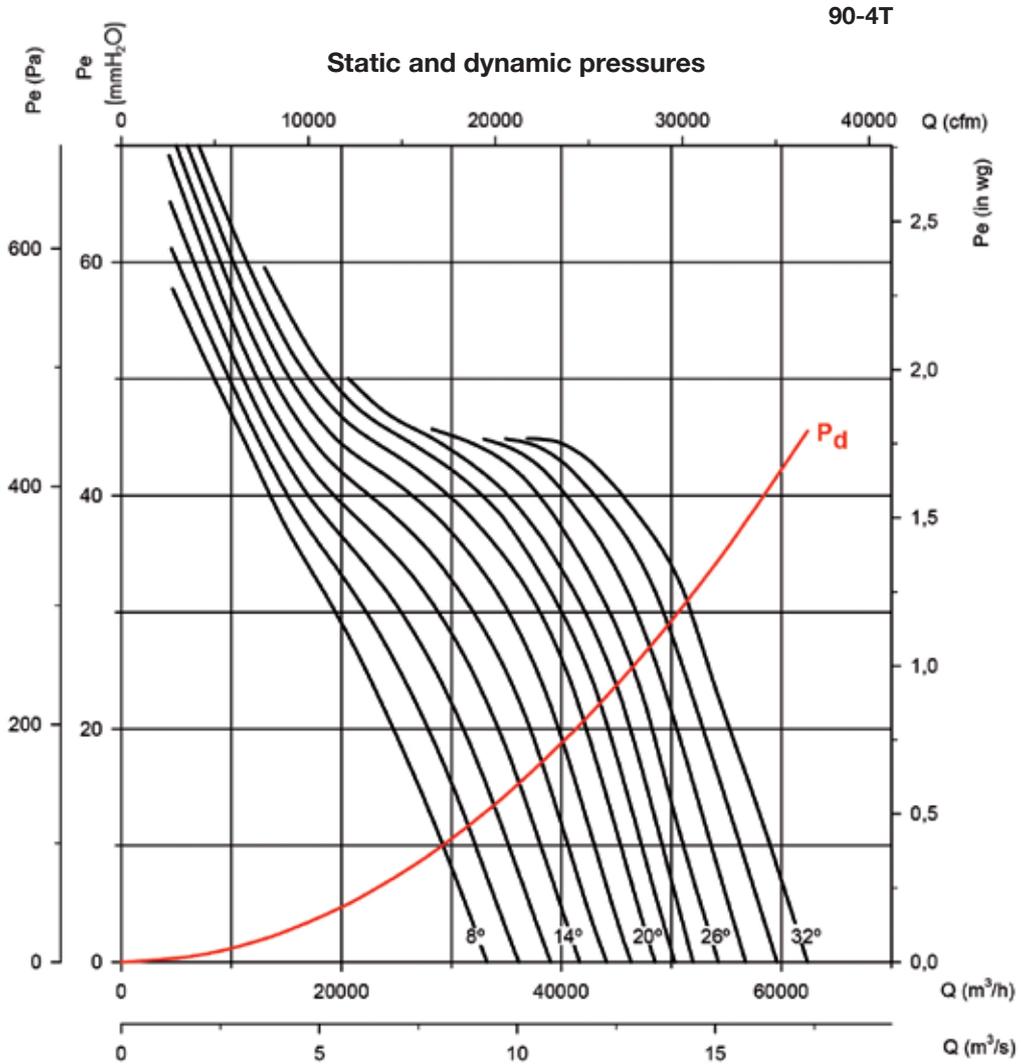

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

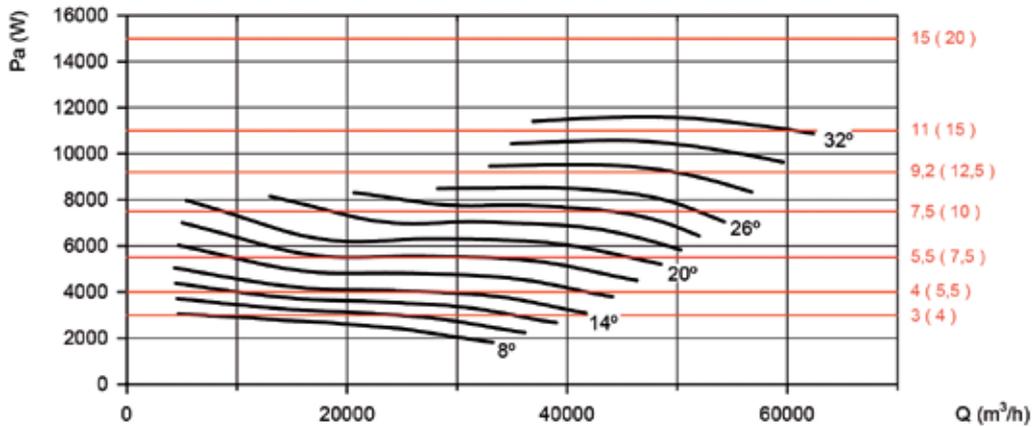

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

Absorbed power

Recommended Motor Power kW(CV)

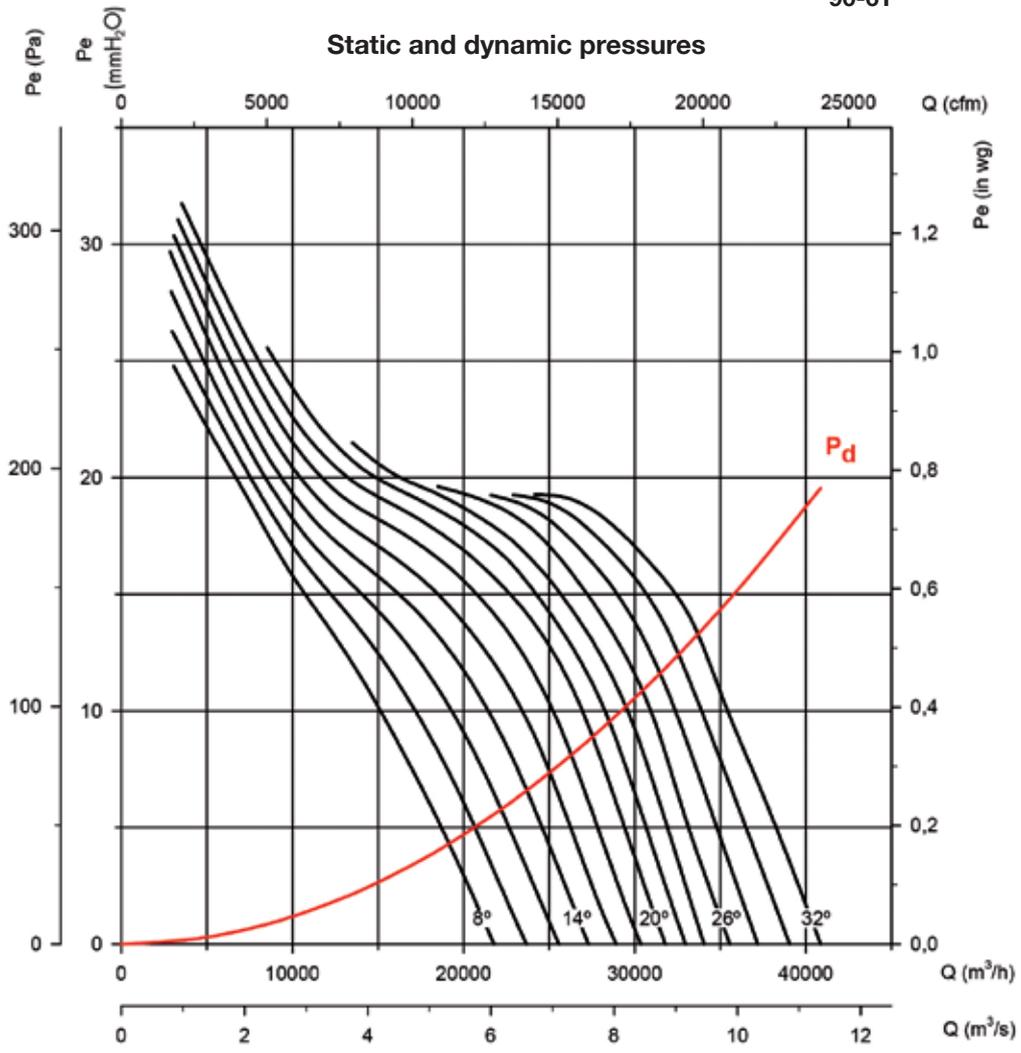

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

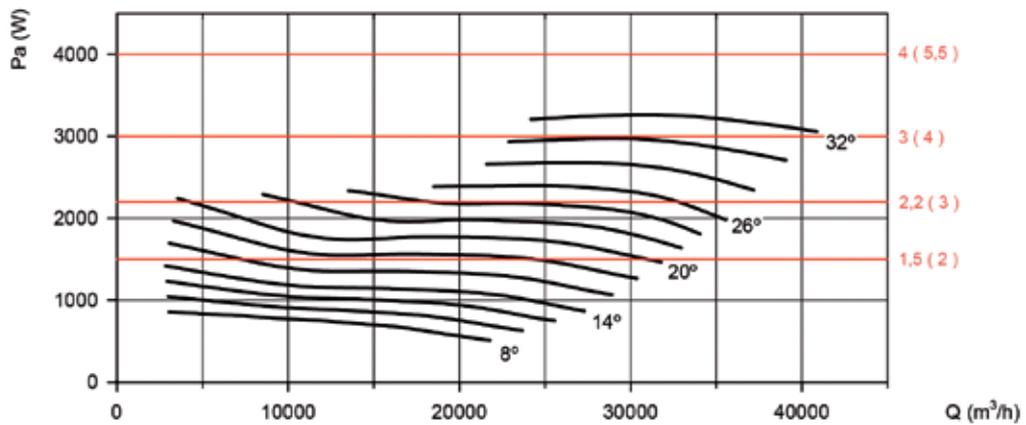

Pe= Static pressure in mmH₂O, Pa and inwg.

90-6T

Absorbed power

Recommended Motor Power kW(CV)

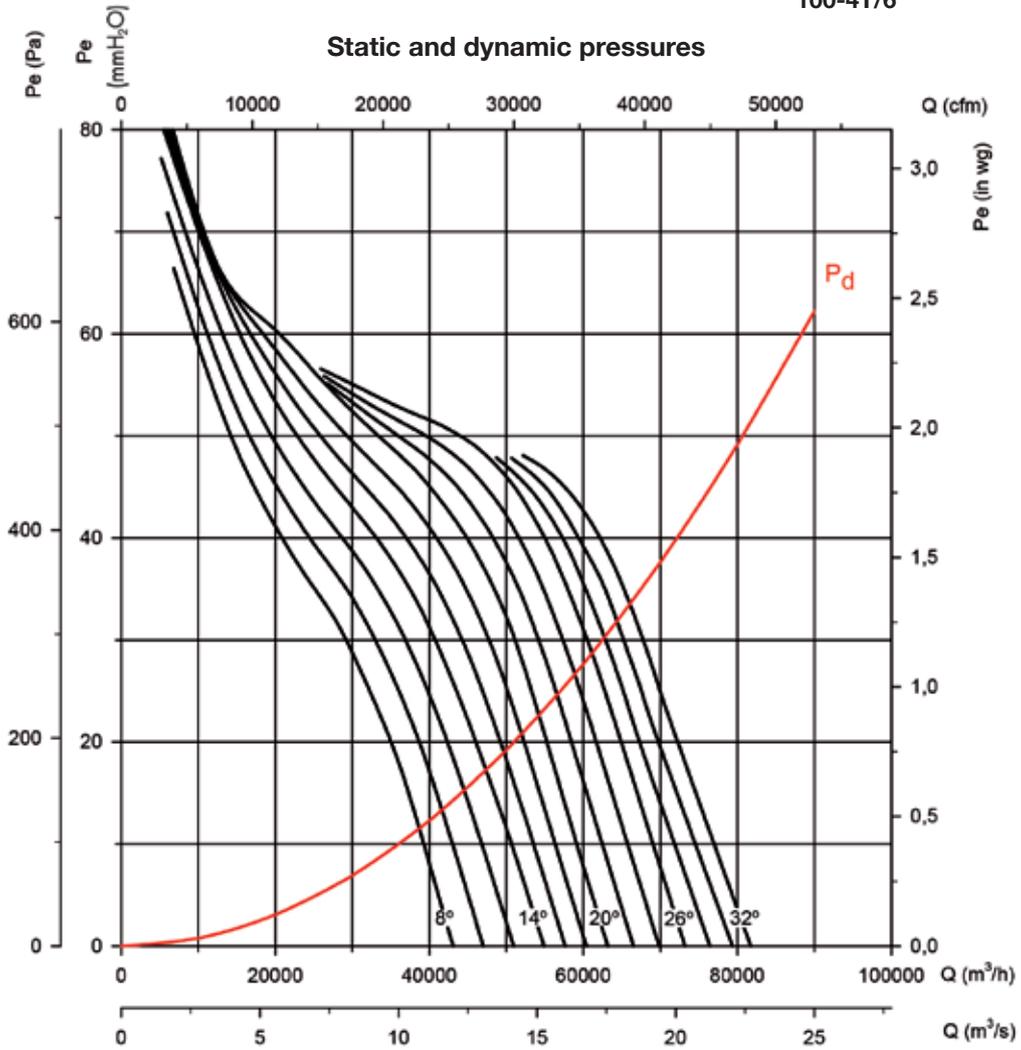

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

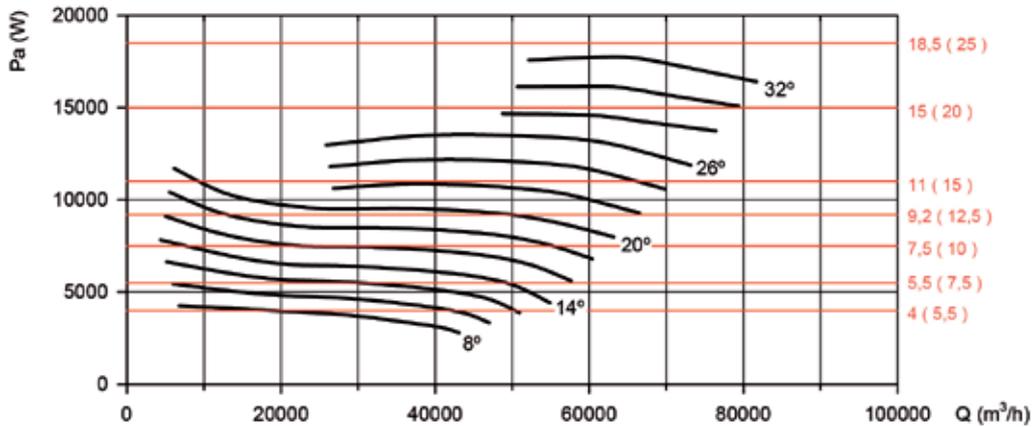

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

100-4T/6

Recommended Motor Power kW(CV)

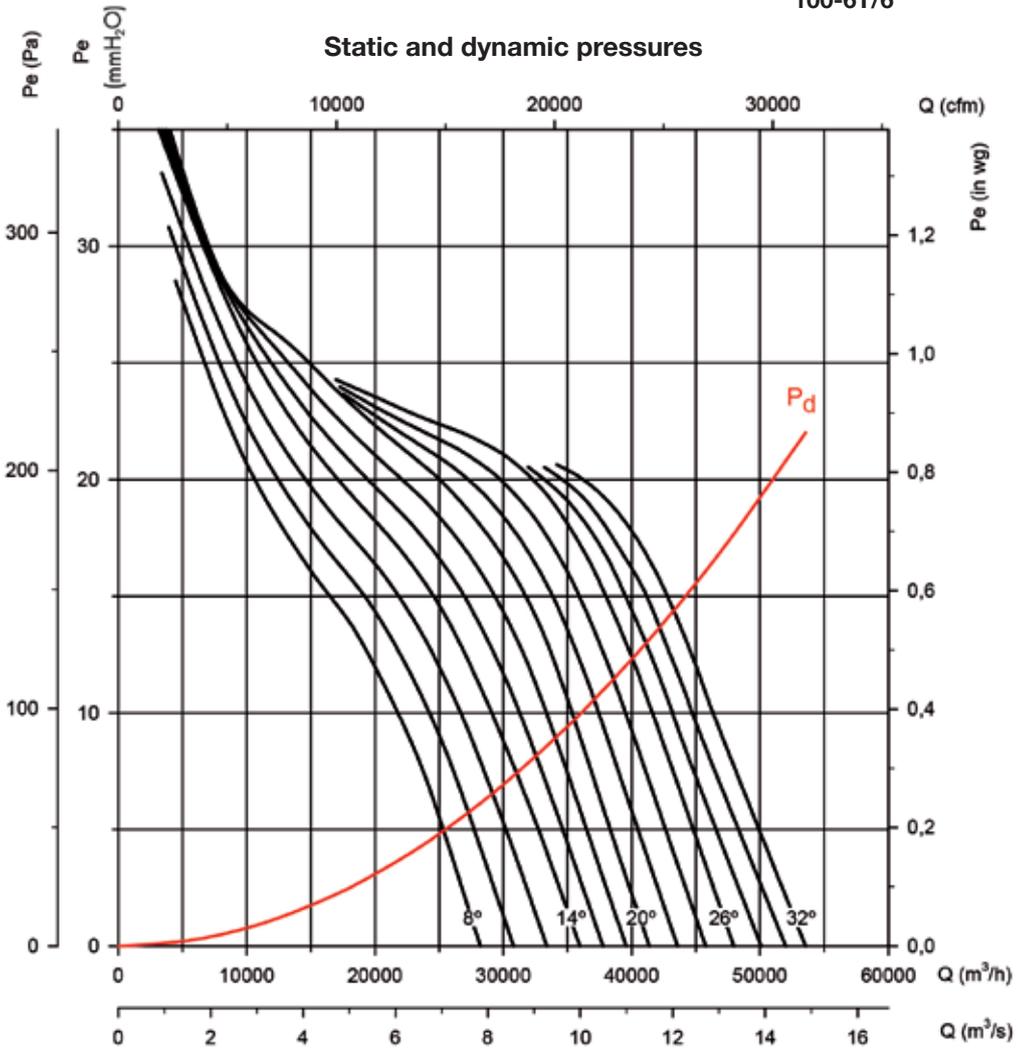

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

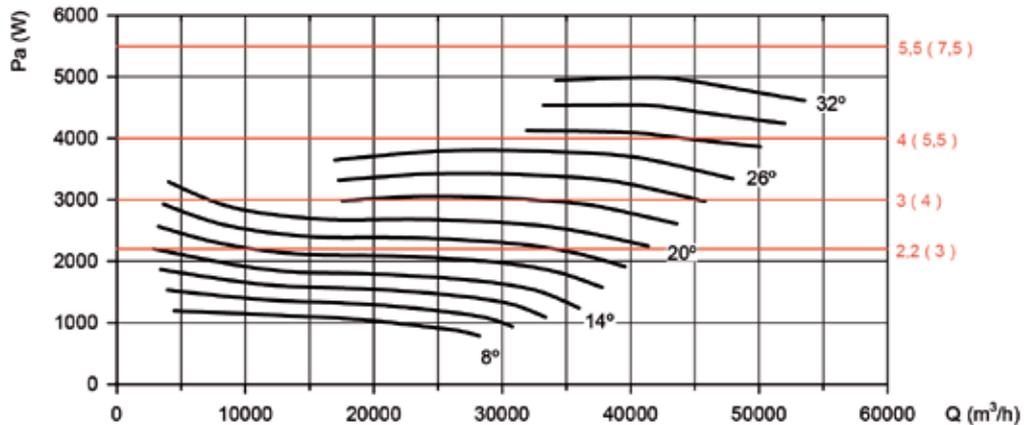

Pe= Static pressure in mmH₂O, Pa and inwg.

100-6T/6

Absorbed power

Recommended Motor Power kW(CV)

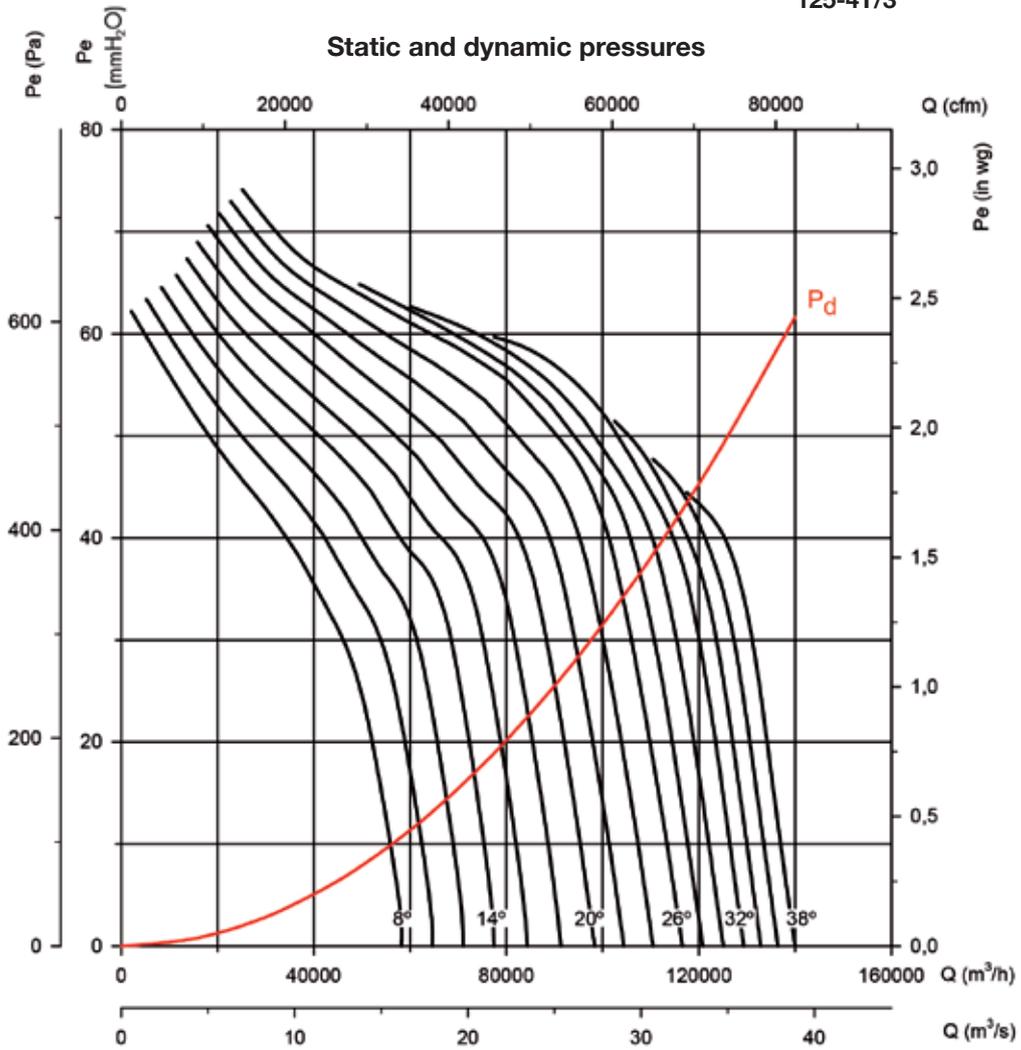

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

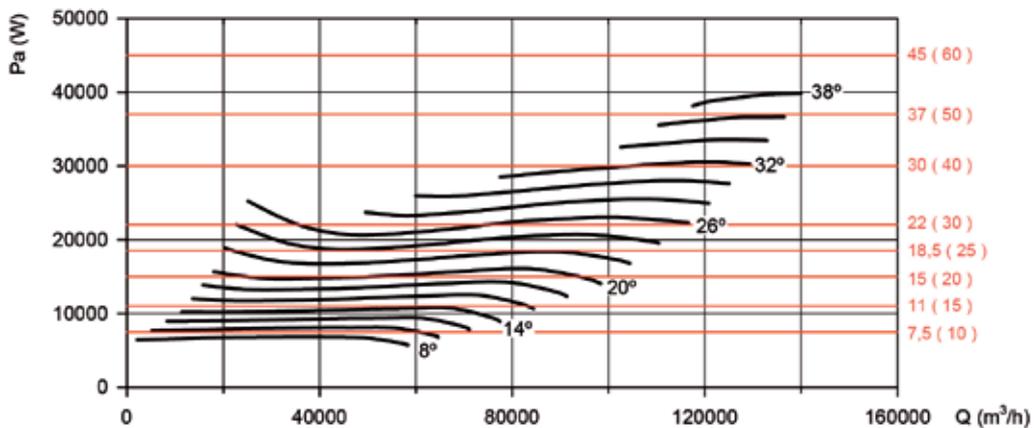

Pe= Static pressure in mmH₂O, Pa and inwg.

125-4T/3

Absorbed power

Recommended Motor Power kW(CV)

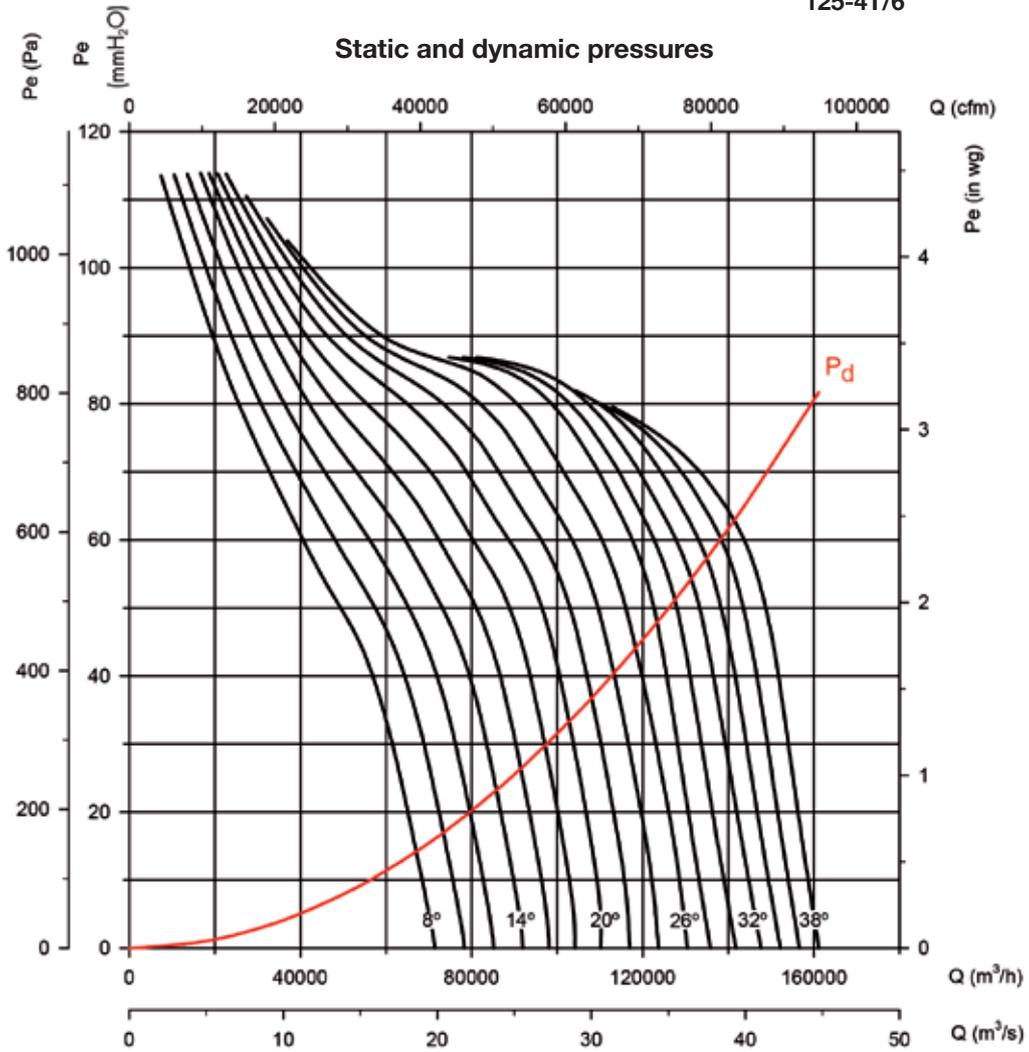

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

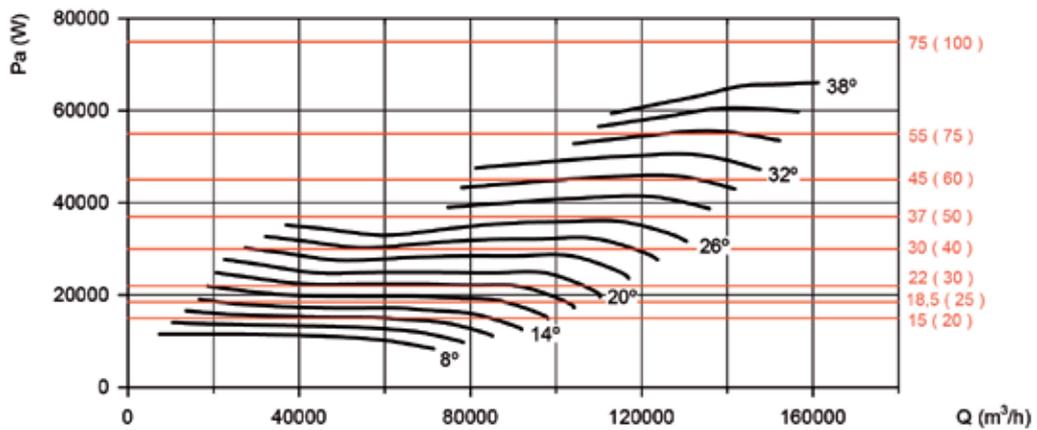

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

125-4T/6

Recommended Motor Power kW(CV)

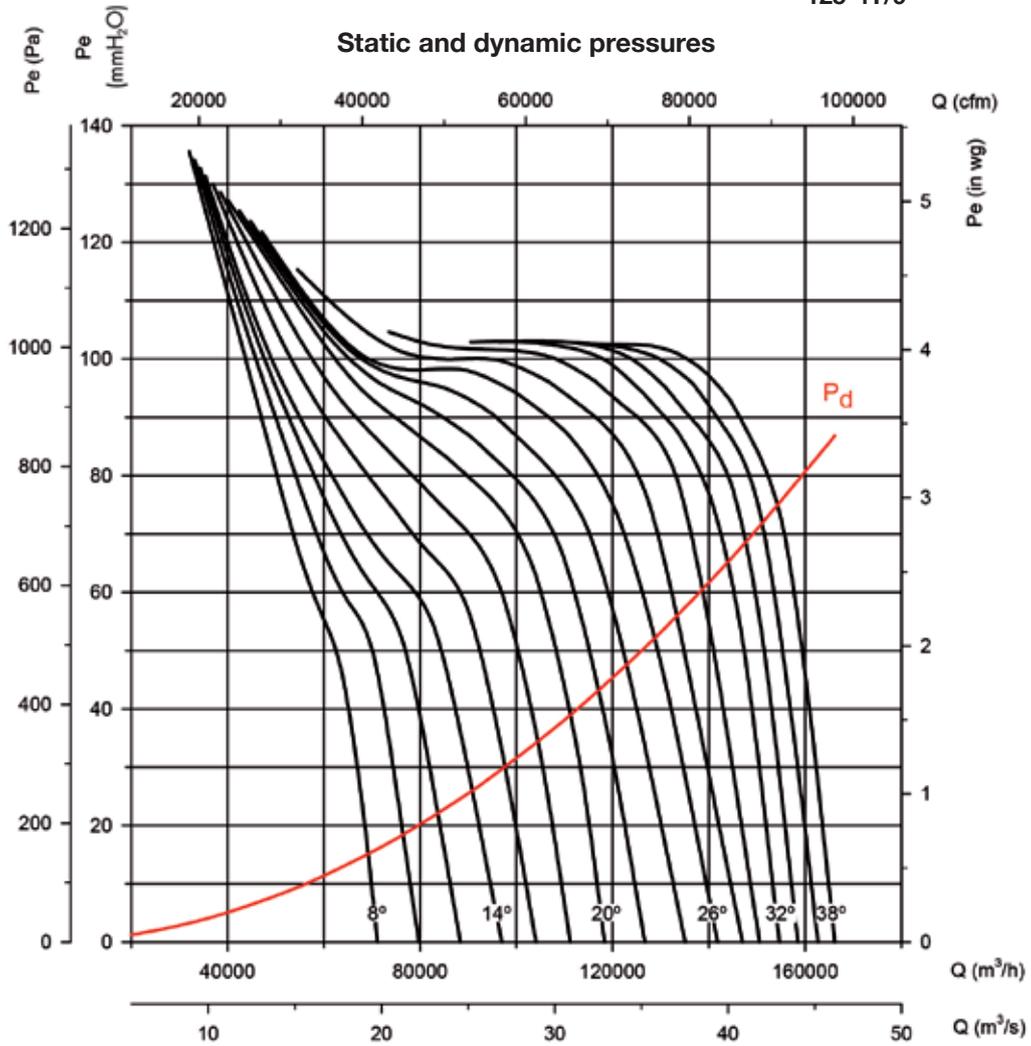

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

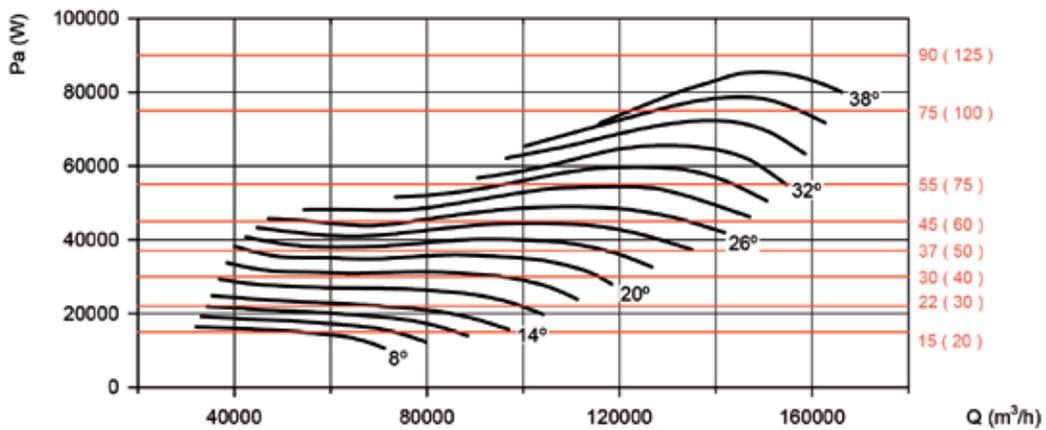

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

125-4T/9

Recommended Motor Power kW(CV)

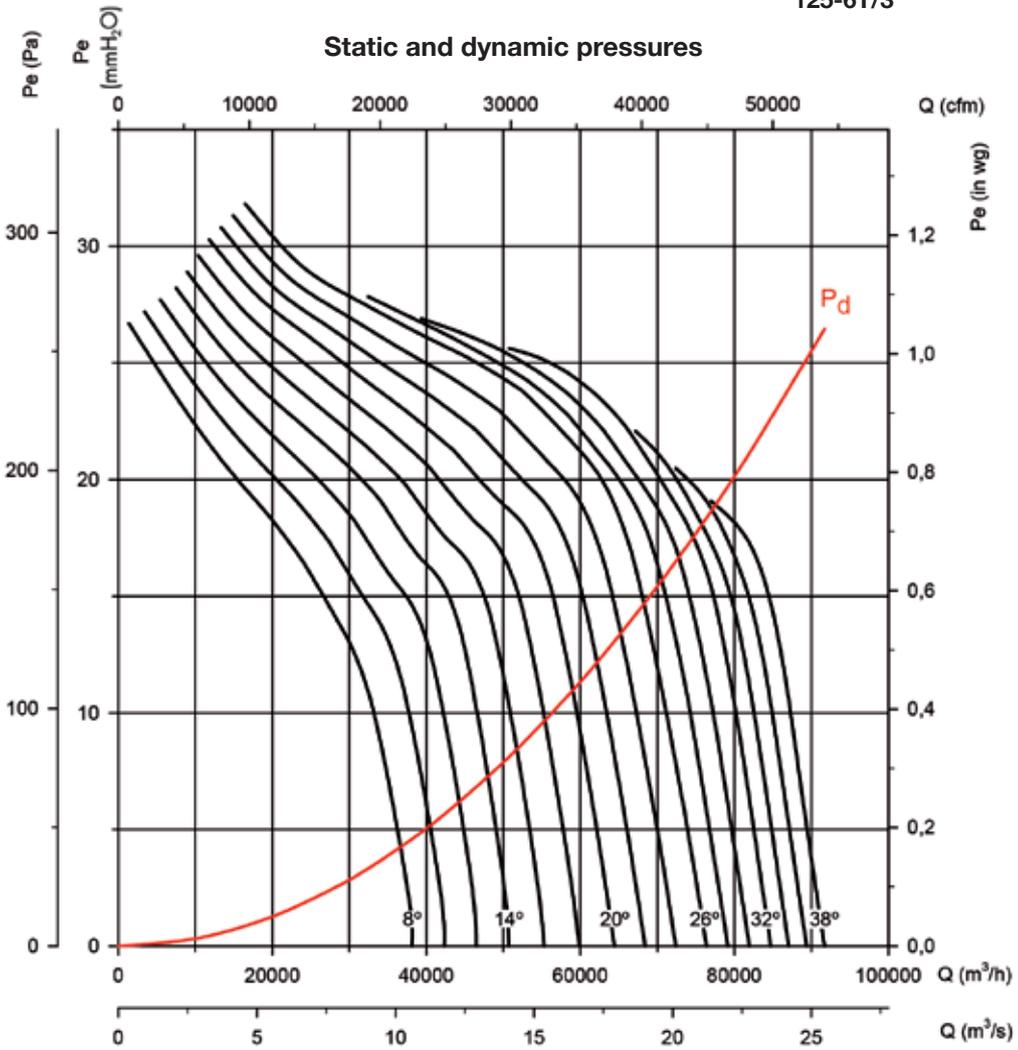

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

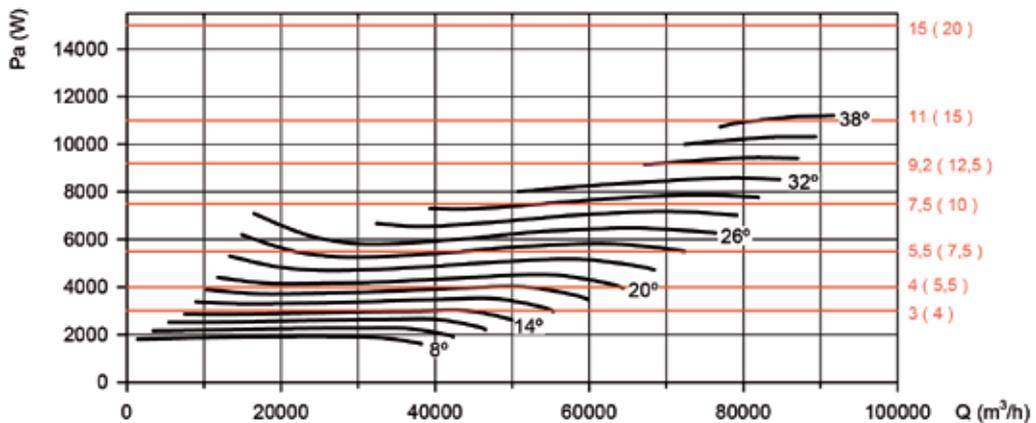

Pe= Static pressure in mmH₂O, Pa and inwg.

125-6T/3

Absorbed power

Recommended Motor Power kW(CV)

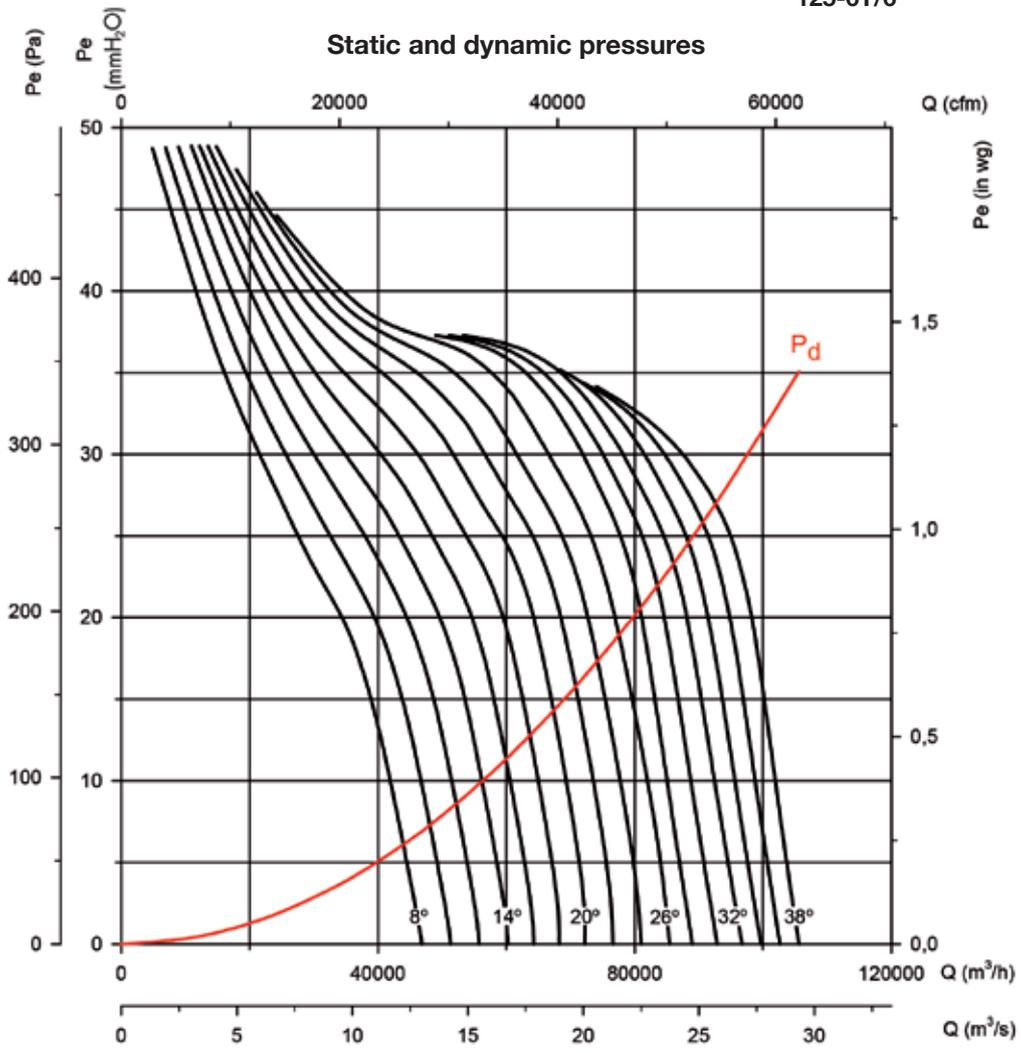

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

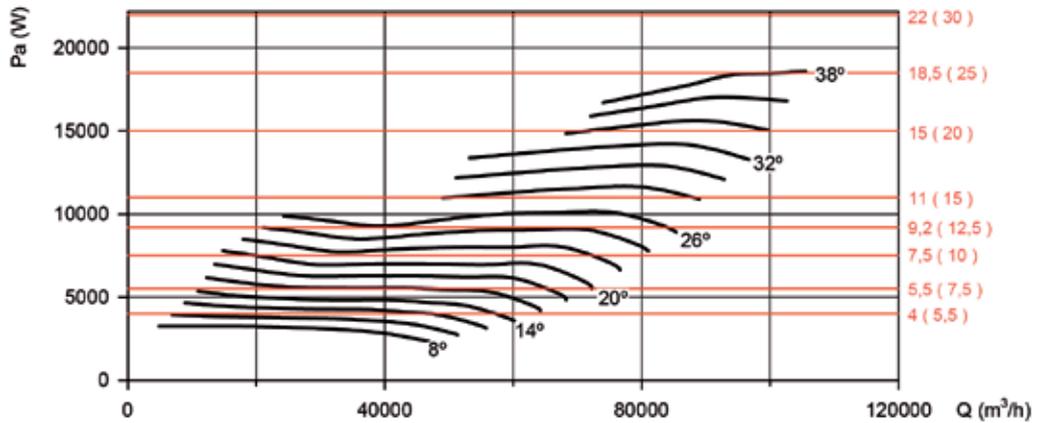

Pe= Static pressure in mmH₂O, Pa and inwg.

125-6T/6

Absorbed power

Recommended Motor Power kW(CV)

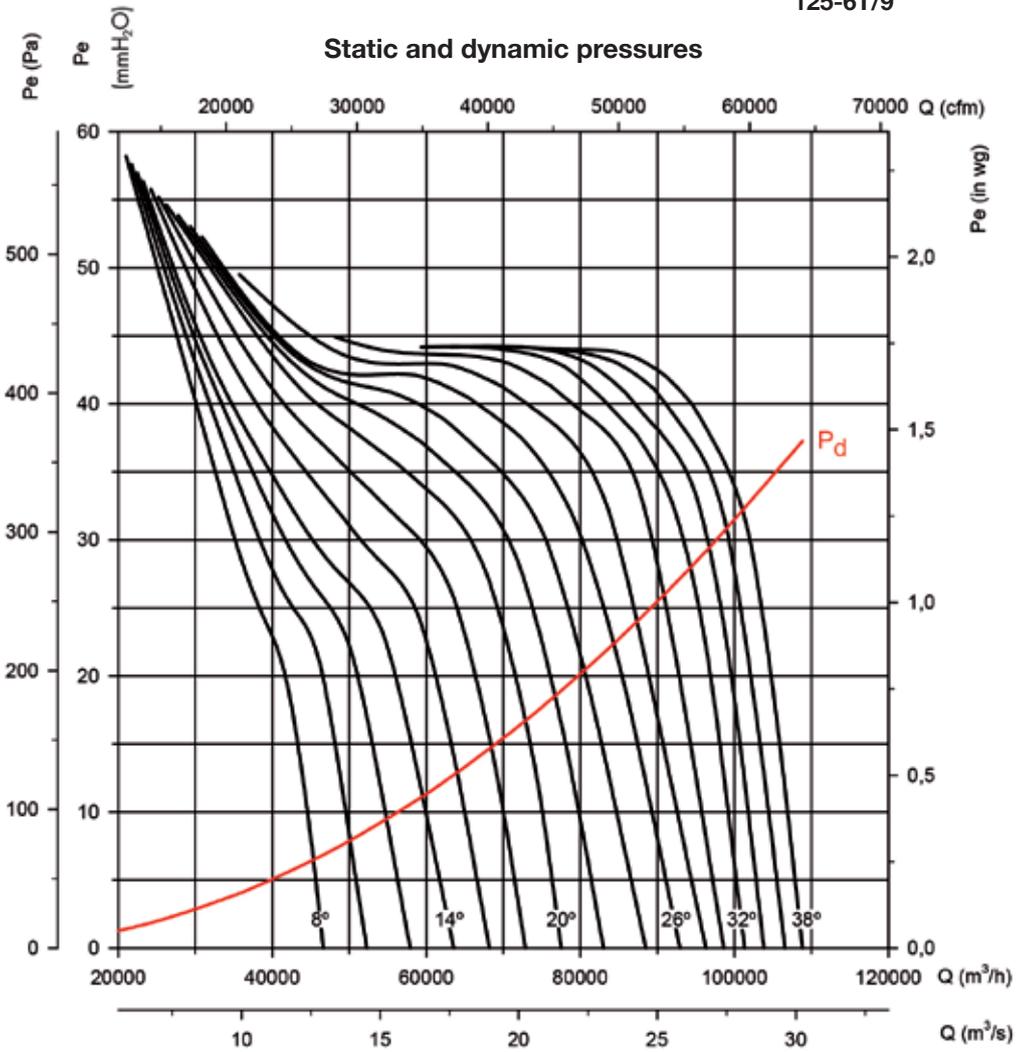

Consult best efficiency point (BEP) characteristics at the end of the series.

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

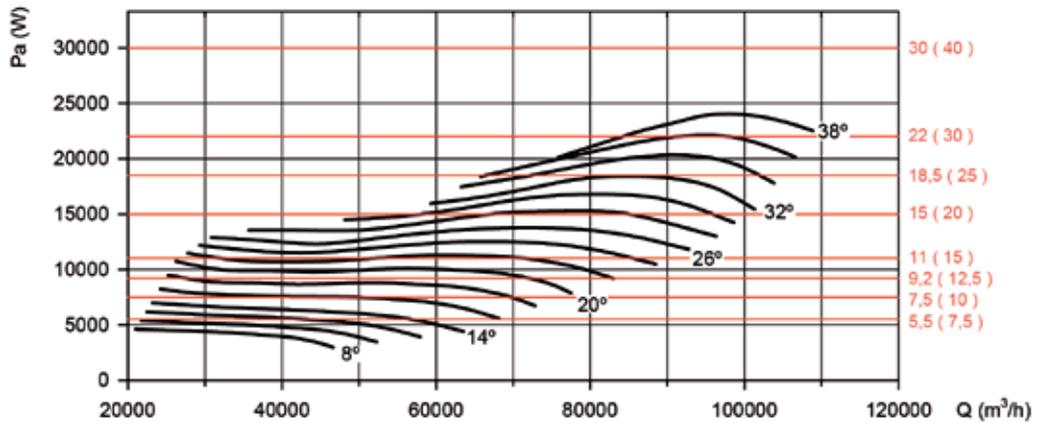

Pe= Static pressure in mmH₂O, Pa and inwg.

125-6T/9

Absorbed power

Recommended Motor Power kW(CV)

Consult best efficiency point (BEP) characteristics at the end of the series.

400°C/2h rated dynamic discharge system with motorised opening function, fitted with roof-mounted extractor, for smoke extraction in the event of fire

Dynamic discharge systems with roof-mounted extractors and motorised opening function. Specially designed for the fast, effective extraction of harmful smoke and gases in the event of fire. Suitable for installation in industrial or commercial buildings. Approved in accordance with standard EN 12101-3, with F-400 certificate

The rapid smoke extraction permits the efficient intervention of fire fighters, fast evacuation of people and prevents new sources of fire and greater structural damage to the building. Can also be used for environmental ventilation in the buildings in which it is installed

Discharge manifold:

- An extremely robust structure that is able to withstand severe weather changes.
- Equipment structure made of corrosion-proof galvanised sheet steel.
- Water-tight design to prevent the entry of water.
- Heat insulation of 60 mm to prevent hot air loss in the winter.
- Adaptable skirting for correct, easy installation on the roof.
- Maintenance switch fitted with NA/NC auxiliary contact to control equipment disconnection.

Opening system:

- Motorised opening arms, with encapsulated IP-65 mechanism.
- Supply voltage 230 V, AC 50Hz.
- Reinforced, guaranteed system with more than 10,000 operations at maximum load.
- Maximum load 1000 Nw.
- Automatic opening via external control system signal (fire station, smoke detector, manual switch...) Control systems not included in the supply.
- Manual opening for environmental ventilation via switch.
- Limit switch to signal the hatch position.

Fan:

- THT series extractors, with F-400 certificate no. 0370-CPR-0305
- Tubular wrap in sheet steel with polyester resin corrosion-proof treatment
- Cast aluminium orientable rotors

Motor:

- Class H motors, S1 continuous operation and S2 emergency use, with ball bearings and IP55 protection
- Three-phase 230/400V-50Hz (up to 3kW) and 400/690V-50Hz (powers greater than 3kW)
- Maximum temperature of air to be carried:
- S1 continuous operation -20°C +40°C
- S2 operation, 400°C/2h

Finish:

- Anti-corrosive galvanised sheet steel

On request:

- Fitted with F-300 rated fans
- Polyester resin corrosion-proof paint finish
- Motorised opening arms with supply voltage of 24V DC

Acoustic characteristics

The values given are determined by measuring the noise power in dB(A) obtained in a free field at a distance equivalent to twice the size of the fan plus the rotor diameter, with a minimum of 1.5 m.

Noise power spectrum Lw(A) in dB(A) per Hz frequency band.

Installation diagram

1. THT/HATCH discharge manifold
2. THT fan
3. Motorised arms (230V AC or 24V DC x2)
4. Limit switch
5. Discharge control grille
6. Aspiration conduit connection flange
7. Aspiration protective grille (optional)
8. Roof opening
9. Roof
10. Water filtration protection
11. Direct mounting with adaptable skirting

Actuator power supply
1x230V 50Hz
or 24 VDC

Motor power supply
3x400V 50Hz

Limit switch connection

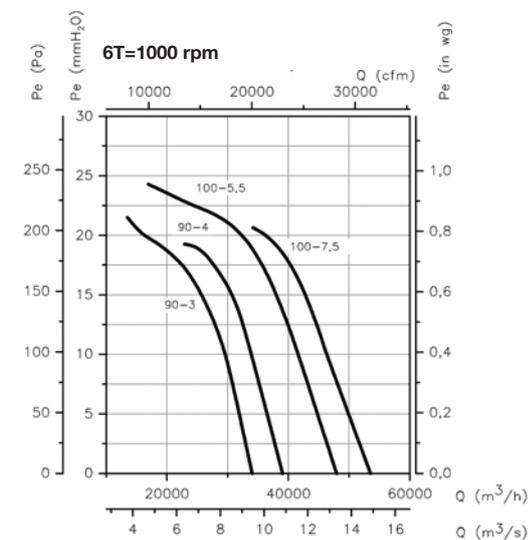

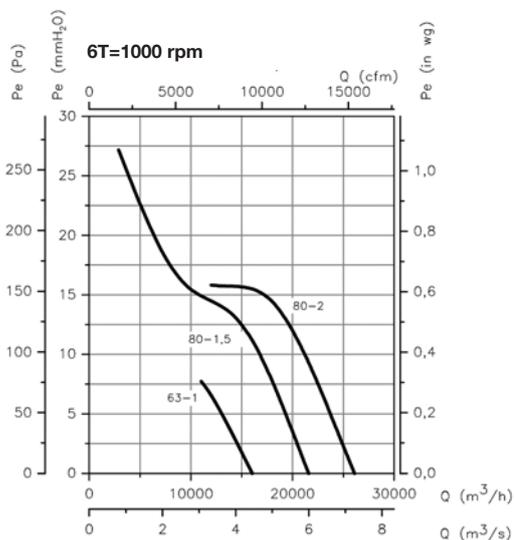

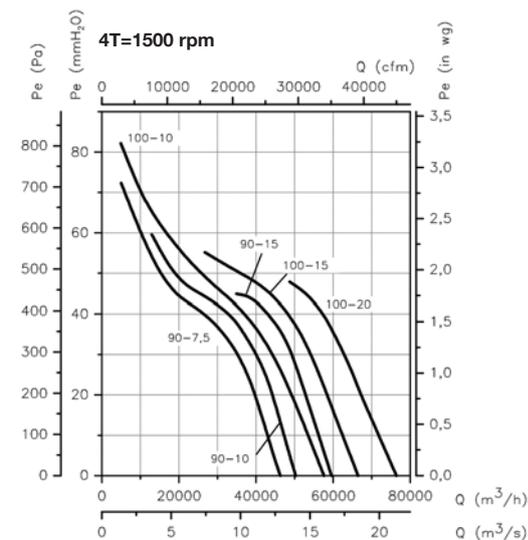

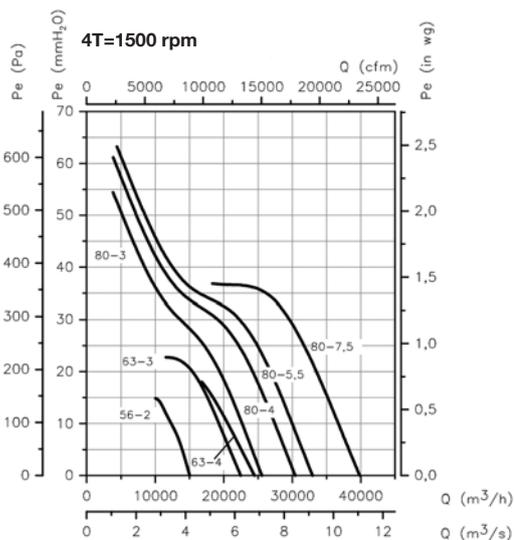

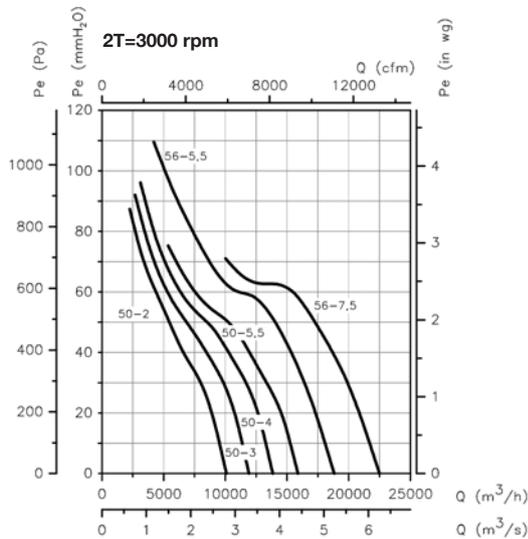

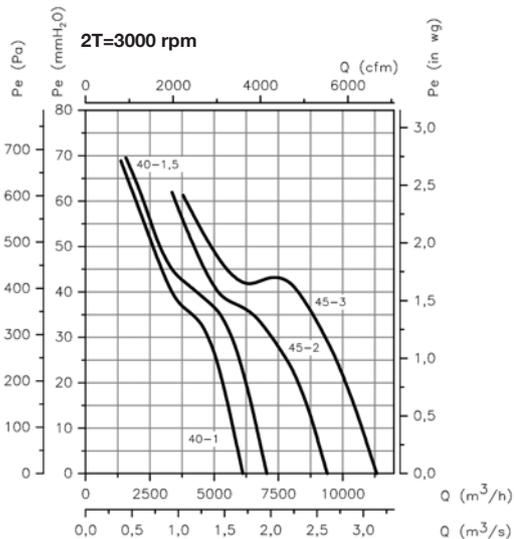

— Pre-installation supplied by manufacturer
 - - - To be performed by the installer

Note: For motors with powers greater than 5.5kW it is advisable to use an electronic starter

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

CHT CVT

400°C/2h centrifugal roof-mounted extractor fans, with horizontal or vertical air outlet

CHT: 400°C/2h centrifugal roof-mounted extractor fans, with horizontal air outlet and aluminium rain cap

CVT: 400°C/2h centrifugal roof-mounted extractor fans, with vertical air outlet and aluminium rain cap

Fan:

- Galvanised sheet steel support base
- Turbine with reaction blades, made of galvanised sheet steel
- Bird control grille
- Aluminium rain cap
- Approved in accordance with standard EN 12101-3, with certificate no. 0370-CPR-0897

Motor:

- IE2 efficiency motors for powers equal to or greater than 0.75kW and lower than 7.5kW, except single-phase, 2-speed and 8-pole
- Class F motors with ball bearings and IP55 protection except single-phase models, IP54 protection and 1 or 2 speeds, depending on model
- Single-phase 230V-50Hz and three-phase 230/400V-50Hz
- Maximum temperature of air to be carried: -25°C +120°C

Finish:

- Corrosion-proof galvanised sheet steel and aluminium

On request:

- Special windings for different voltages
- ATEX-certified Category 3

CHT

CVT

Support for roof-mounting

Order code

CHT — **200** — **4T** — **BS**

CHT: 400°C/2h centrifugal roof-mounted extractor fans, with horizontal air outlet.

CVT: 400°C/2h centrifugal roof-mounted extractor fans, with vertical air outlet

Turbine size

Number of motor poles
2=2900 r/min. 50 Hz
4=1400 r/min. 50 Hz
6=900 r/min. 50 Hz
8=750 r/min. 50 Hz
12=500 r/min. 50 Hz

T=Three-phase

BS: Raised support base
BSS: Raised support base with silencer

Technical characteristics

Data on the best efficiency point of the turbine motor unit

Acoustic characteristics

The indicated values are determined by measuring the pressure and noise level and noise level in dB(A) obtained in a free field at a distance of 6 m.

Noise power spectrum Lw(A) in dB(A) per Hz frequency band.

Values taken during aspiration with 2/3 maximum flow rate (2/3Qmax)

Accessories

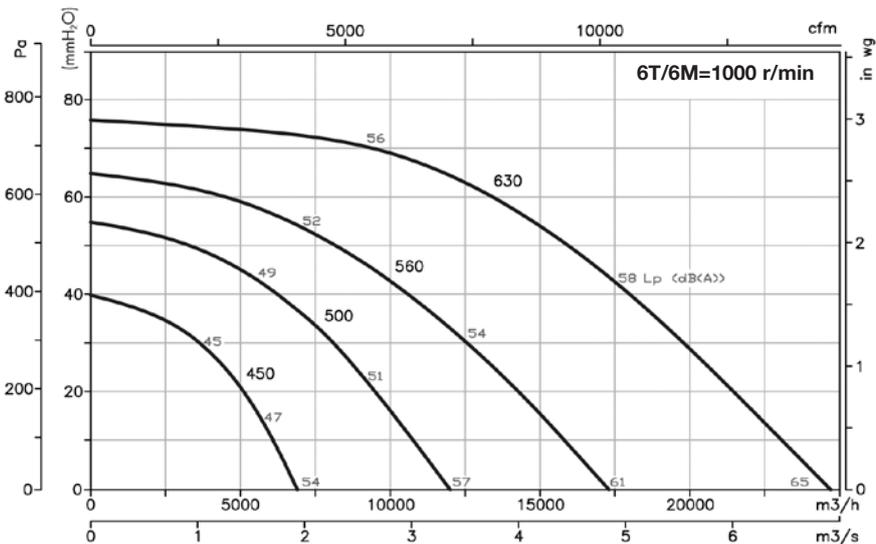

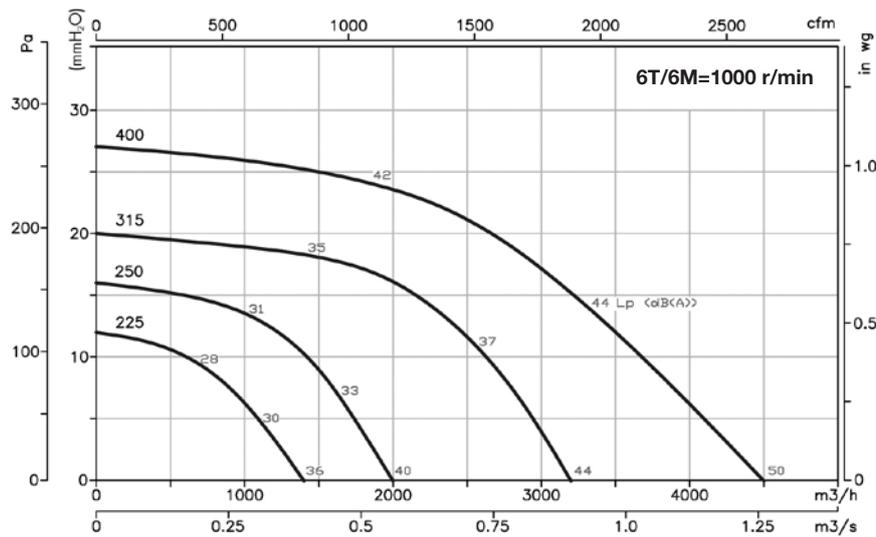

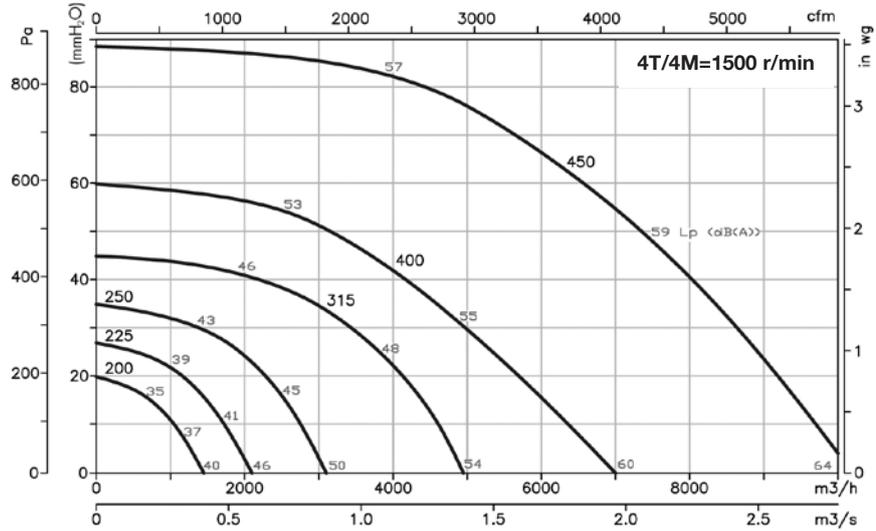

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

Pe= Static pressure in mmH₂O, Pa and inwg.

The Lp noise levels (dB(A)) indicated in the curves are pressures measured in a free field during aspiration, at 6 metres.

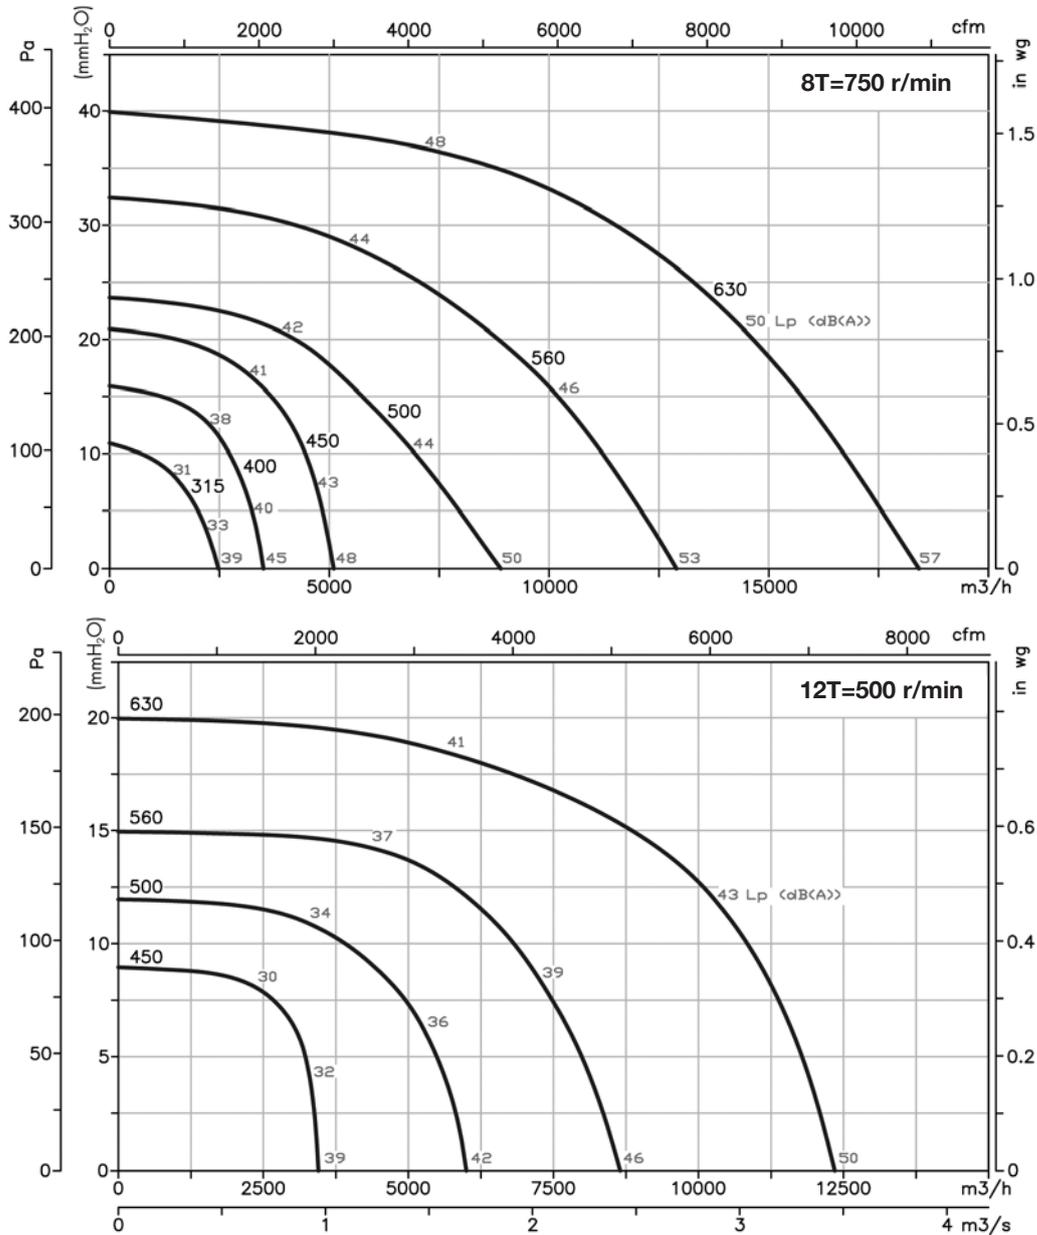

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

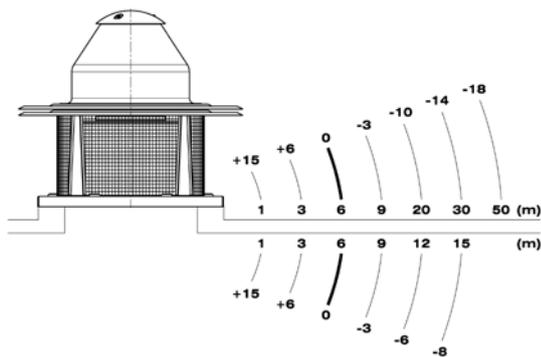

Pe= Static pressure in mmH₂O, Pa and inwg.

The Lp noise levels (dB(A)) indicated in the curves are pressures measured in a free field during aspiration, at 6 metres.

Sound pressure variation depending on distance

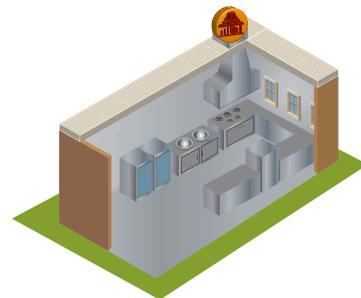

The noise level may vary depending on the roof or tile structure.

Example of application

Extractor fans suitable for use in industrial kitchens
For the correct application of standard:

- C.T.E. Código Técnico de la Edificación (Technical Building Code). Basic Document SI on fire safety. Basic Document HS on health and safety.

ROOF-MOUNTED ATEX EXTRACTOR FANS

RFHD

Roof-mounted centrifugal extractor fans with horizontal outlet and ATEX Ex d certification

Centrifugal roof-mounted extractor fans, with horizontal air outlet and aluminium rain cap. ATEX Certification and CEE ExII2G Ex d non-sparking motor for working in explosive atmospheres.

Ex "d" marking: CE Ex II 2G Ex d
 Notified Body: L.O.M
 Identification no.: LOM03ATEX0147

Fan:

- Support base in galvanised sheet steel, with brass intake nozzle, in accordance with standard EN-14986:2007
- Turbine with reaction blades, made of galvanised sheet steel
- Bird control grille
- Aluminium rain cap

Motor:

- Class F motors with ball bearings and ATEX Ex d II B T4 Gb non-sparking certification
- Three-phase 230/400 V-50 Hz (up to 4kW) and 400/690 V-50 Hz (higher powers)

- Maximum temperature of air to be carried: -20°C +80°C

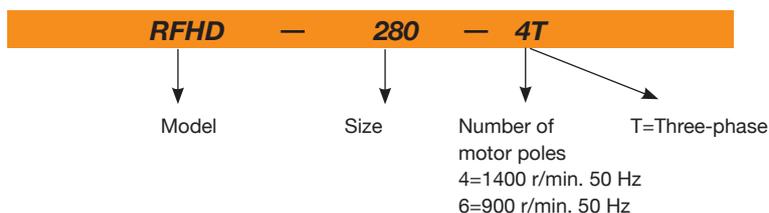

Finish:

- Corrosion-proof galvanised sheet steel and aluminium

On request:

- Motors with built-in PTC
- Special windings for different voltages and frequencies
- ATEX construction for different categories
- Single-phase, Ex d non-sparking motors

ROOF-MOUNTED ATEX EXTRACTOR FANS

HT/ATEX

Roof-mounted axial extractor fans with ATEX Certification and possibility of Ex e, Ex d, Ex tc and Ex tb marking

Roof-mounted extractor fans with flat base and ATEX Certification, with CEE ExII2G Ex e anti-explosive, CEE ExII2G Ex d, Ex tc, or Ex tb non-sparking motor for working in explosive atmospheres containing dust or gas.

Fan:

- Support base in galvanised sheet steel with painted aluminium strip in rotor zone, in accordance with standard EN-14986
- Cast aluminium rotor
- Non-sparking cable gland included
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499
- Rain cap made of painted galvanised sheet steel, with corrosion-proof protection
- Motor-rotor airflow direction

Motor:

- Class F motors with ball bearings and ATEX Ex e explosion-proof and Ex, Ex tx or Ex tb non-sparking certification
- Three-phase 230/400V-50Hz (up to 4 kW) and 400/690V-50Hz (powers greater than 4 kW)
- Operating temperature: -20°C +40°C

Finish:

- ATEX corrosion-proof, with non-ferric paint finish of polyester resin polymerised at

Ex "e" marking: CEE II 2G Ex e
 Ex "d" marking: CEE II 2G Ex d
 Ex tc marking: CEE II 3D Ex tc
 Ex tb marking: CEE II 2D Ex tb
 Notified Body: L.O.M.
 Identification no.: LOM3ATEX0157

HT 25...63

HT 71...100

190°C, previously degreased with phosphate-free nanotechnological treatment

On request:

- Motors with built-in PTC
- Special windings for different voltages and frequencies
- ATEX construction for different categories
- Extractor fans with 2-speed motors
- Single-phase, Ex d non-sparking motors

Order code

HTMH/ATEX

Roof-mounted multifunctional extractor fans for large flow rates with ATEX Certification and possibility of Ex e, Ex d, Ex tc and Ex tb marking

Ex "e" marking: $\text{C}\text{E}\text{C}\text{E}\text{X}$ II 2G Ex e
 Ex "d" marking: $\text{C}\text{E}\text{C}\text{E}\text{X}$ II 2G Ex d
 Ex tc marking: $\text{C}\text{E}\text{C}\text{E}\text{X}$ II 3D Ex tc
 Ex tb marking: $\text{C}\text{E}\text{C}\text{E}\text{X}$ II 2D Ex tb
 Notified Body: L.O.M.
 Identification no.: LOM03ATEX0157

Robust multifunctional extractor fans for large extraction operation with large flow rates and with ATEX Certification, CEE ExII2G Ex explosion-proof and CEE ExII2G Ex d, Ex tc, or Ex tb non-sparking motor for working in explosive atmospheres containing dust or gas.

Fan:

- Painted, galvanised sheet steel support base
- Cast aluminium orientable rotors
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499
- Painted, galvanised sheet steel rain cap, with natural air outlet

Motor:

- ATEX-certified, Ex e explosion-proof, Ex d, Ex tc or Ex tb non-sparking class F motors with ball bearings
- Single-phase 220/230V-50Hz and three-phase 230-240V/380/400V-50Hz (up to 4 kW) and 400/690V-50Hz (powers greater than 4 kW)
- Operating temperature: -20°C +40°C

at 190°C, previously degreased with phosphate-free nanotechnological treatment.

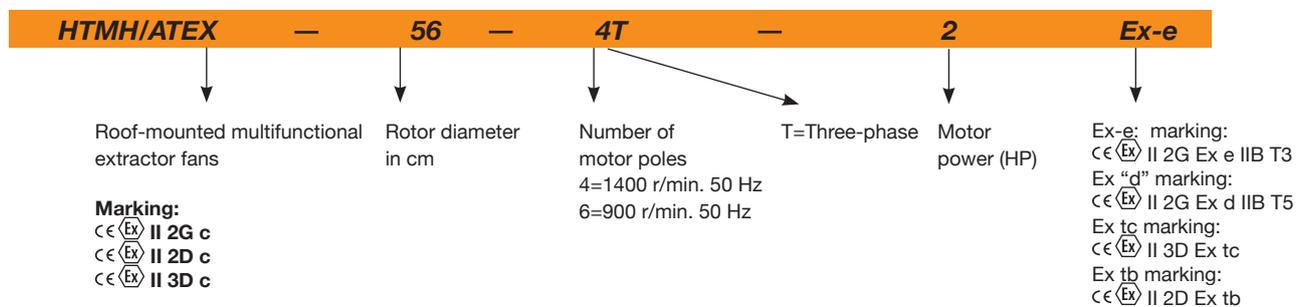

On request:

- Made entirely of stainless steel
- Made of hot-dip galvanised steel
- Motors with built-in PTC
- Special windings for different voltages and frequencies
- ATEX construction for different categories
- Extractor fans with 2-speed motors
- Single-phase, Ex d non-sparking motors

Finish:

- ATEX corrosion-proof, with non-ferric paint finish of polyester resin polymerised

Accessories

ROOF-MOUNTED ATEX EXTRACTOR FANS

HTMV/ATEX

Roof-mounted axial extractor fans with vertical air outlet, ATEX certified and optional Ex e, Ex d, Ex tc and Ex tb marking

Ex "e" marking: CEE^(Ex) II 2G Ex e
 Ex "d" marking: CEE^(Ex) II 2G Ex d
 Ex tc marking: CEE^(Ex) II 3D Ex tc
 Ex tb marking: CEE^(Ex) II 2D Ex tb
 Notified Body: L.O.M.
 Identification no.: LOM03ATEX0157

Roof-mounted axial extractor fans with vertical air outlet and aluminium rain cap, ATEX Certification, with CEE ExII2G Ex e explosion-proof, CEE ExII2G Ex d, Ex tc, or Ex tb non-sparking motor for working in explosive atmospheres containing dust or gas.

Fan:

- Galvanised sheet steel support base with corrosion-proof treatment
- Cast aluminium orientable rotors
- Anti-contact protective grille pursuant to standard UNE-EN ISO 12499
- Anti-return hatch in aluminium sheet metal to prevent the entry of water when the fan is not operating
- Motor-rotor airflow direction

Motor:

- ATEX-certified, Ex e explosion-proof, Ex d, Ex tc and Ex tb non-sparking class F motors with ball bearings
- Three-phase 230/400V.-50Hz (up to 4 kW) and 400/690V.-50Hz (powers greater than 4 kW)
- Maximum temperature of air to be carried: -20°C +40°C

erised at 190°C, previously degreased with phosphate-free nanotechnological treatment

On request:

- Made entirely of stainless steel
- Made of hot-dip galvanised steel
- Motors with built-in PTC
- Special windings for different voltages and frequencies
- ATEX construction for different categories
- Extractor fans with 2-speed motors
- Single-phase, Ex d non-sparking motors

Finish:

- ATEX corrosion-proof, with non-ferric paint finish of polyester resin polym-

Order code

(1) The noise level values are pressures in dB(A) measured at a distance of 6 metres in a free field.

Acoustic characteristics

The indicated values are determined by measuring the pressure and noise level and noise level in dB(A) obtained in a free field at a distance of 6 m.

Noise power spectrum Lw(A) in dB(A) frequency band in [Hz]

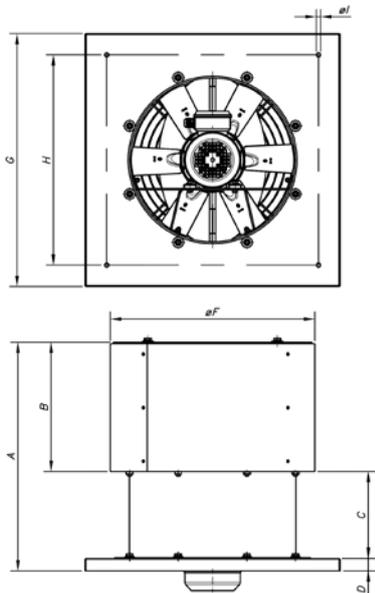

Values taken during aspiration with maximum flow rate

ROOF-MOUNTED ATEX EXTRACTOR FANS

CHT/ATEX CVT/ATEX

Roof-mounted centrifugal extractor fans with horizontal or vertical air outlet, ATEX Certification and possibility of Ex e, Ex d, Ex tc and Ex tb marking

Ex "e" marking: $\text{C}\text{E}\text{Ex} \text{II 2G Ex e}$
Ex "d" marking: $\text{C}\text{E}\text{Ex} \text{II 2G Ex d}$
Ex tc marking: $\text{C}\text{E}\text{Ex} \text{II 3D Ex tc}$
Ex tb marking: $\text{C}\text{E}\text{Ex} \text{II 2D Ex tb}$
Notified Body: L.O.M.
Identification no.: LOM3ATEX147

CHT

CVT

CHT: Roof-mounted centrifugal extractor fans with horizontal air outlet and aluminium rain cap, ATEX Certification, with CEE ExII2G Ex e anti-explosion, CEE ExII2G Ex d, Ex tc, or Ex tb explosion-proof motor for working in explosive atmospheres containing dust or gas.

CVT: Roof-mounted centrifugal extractor fans with vertical air outlet and aluminium rain cap, ATEX Certification, with CEE ExII2G Ex e anti-explosion, CEE ExII2G Ex d, Ex tc, or Ex tb explosion-proof motor for working in explosive atmospheres containing dust or gas.

Fan:

- ATEX support base with copper intake nozzle, in accordance with standard EN-14986
- Turbine with reaction blades
- Bird control grille
- Aluminium rain cap

Motor:

- ATEX-certified, Ex e explosion-proof, Ex d, Ex tc or Ex tb non-sparking class F motors with ball bearings
- Three-phase 230/400V-50Hz (up to 4 kW) and 400/690V-50Hz (higher powers)
- Maximum temperature of air to be carried: -20°C +80°C

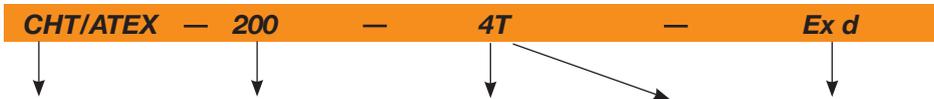

Finish:

- Corrosion-proof galvanised sheet steel and aluminium

On request:

- Motors with built-in PTC
- Special windings for different voltages and frequencies
- ATEX construction for different categories
- Extractor fans with 2-speed motors
- Single-phase, Ex d non-sparking motors

Order code

CHT: Roof-mounted, ATEX-certified, centrifugal extractor fans, with horizontal air outlet

CVT: Roof-mounted, ATEX-certified, centrifugal extractor fans, with vertical air outlet

Turbine size

Number of motor poles
4=1400 r/min. 50 Hz
6=900 r/min. 50 Hz

ROOF-MOUNTED ATEX EXTRACTOR FANS

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm.

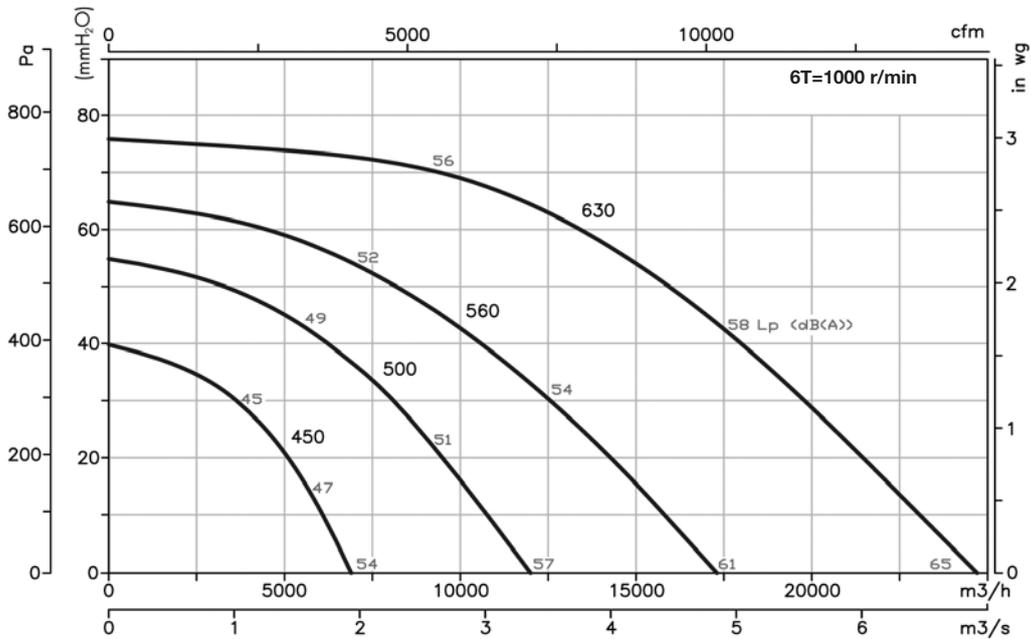

Pe= Static pressure in mmH₂O, Pa and inwg.

The Lp noise levels (dB(A)) indicated in the curves are pressures measured in a free field during aspiration, at 6 metres.

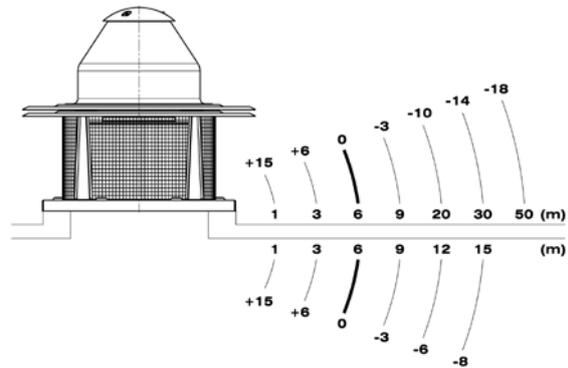

Characteristic curves

Q= Flow rate in m³/h, m³/s and cfm. Pe= Static pressure in mmH₂O, Pa and inwg.
 The Lp noise levels (dB(A)) indicated in the curves are pressures measured in a free field during aspiration, at 6 metres.

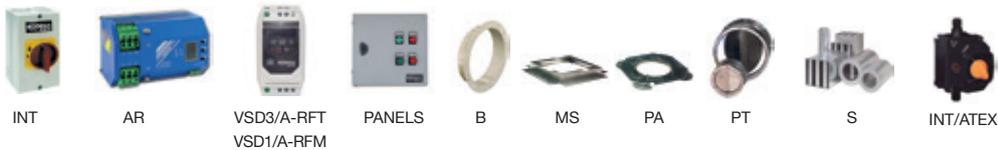

Sound pressure variation depending on distance

The noise level may vary depending on the roof or tile structure.

VARIABLE SPEED DRIVE
VSD Electronic variable speed drive
VSD1/B
VSD3/B

Supply included with fan

CONTROL
Supplied as an optional accessory

POWER SUPPLY
VSD1/B:
220-240 V 50/60 Hz
VSD3/B:
380-415 V 50/60 Hz

Fan:

- Galvanised sheet steel support base
- Turbine with reaction blades, made of galvanised sheet steel.
- Bird control grille
- Aluminium rain cap

Motor and electronic variable speed drive

- High-efficiency E.C. brushless industrial motors fitted with electronic variable speed drives (VSD), adjustable by external 0-10 V control signal. IP55 protection.
- It is advisable to install the electronic variable speed drive (VSD) outside the work area.
- The external signal can be supplied via a manual or an automatic control with an 0-10 V output.
- Electronic variable speed drive (VSD), available with single-phase 220-240 V 50/60 Hz (VSD1/B type) or three-phase 380-415 V 50/60 Hz (VSD3/B type) inputs.

Standard IP20 protection, IP66 protection on request.

- The electronic variable speed drive (VSD) is always supplied programmed at a constant speed.
- Fan operating temperature:
-25°C +60°C
- VSD operating temperature:
-25°C +50°C

Finish:

- Anti-corrosive galvanised sheet steel

Order code including supply of electronic variable speed drive (VSD)

CHT/EW — 200 — 4 — B — T — D

CHT/EW: 400°C/2h roof-mounted, centrifugal, high-efficiency, "Efficient work" extractor fans with horizontal air outlet

CVT/EW: 400°C/2h roof-mounted, centrifugal, high-efficiency, "Efficient work" extractor fans with vertical air outlet

Turbine size

ROOF-MOUNTED EFFICIENT WORK EXTRACTOR FANS

CRF/EW

E.C. BRUSHLESS MOTOR WITH BUILT-IN VSD

Roof-mounted centrifugal extractor fans with low noise level, fitted with external E.C. brushless rotor motor

Roof-mounted centrifugal extractor fans with low noise level and external rotor motor, fitted with an E.C. Brushless industrial motor and a built-in speed regulating power meter.

Fan:

- Made of galvanised sheet steel.
- Turbine with reaction blades made of plastic material.
- Bird control grille.
- Folding body for ease of inspection and maintenance.

Motor:

- High efficiency EC external rotor motors regulated by 0-10V signal. IP54 protection.
- Single-phase 230V-50/60Hz and three-phase 400V-50/60Hz.
- Maximum temperature of air to be carried: -25°C +50°C.

Finish:

- Corrosion-proof galvanised sheet steel.

Order code

CRF/EW: Roof-mounted centrifugal extractor fans with low noise level and EC external rotor motor.

Turbine diameter in mm

M: Single-phase
T: Three-phase
L: Low flow rate
M: Medium flow rate
H: High flow rate

INT

Stop-start safety switches in accordance with Standard UNE-EN 60204-1.

Features:

- Switch to be placed beside the fan, so that mains current can be cut without handling the fan
- IP65 protection
- For three-phase or two-speed fans, use 6-pole switch
- For single-phase fans, use a 3-pole switch

RM

Electronic speed controllers

Features:

- Electronic speed controllers especially designed for fans with single-phase motors, in accordance with standard EN-60335
- Models RM-1, RM-2 and RM-3, IP-54 protection, Models RM-00, RM-01 and RM-02, IP-44 protection
- In accordance with Electromagnetic Compatibility Directives 92/31/EEC and 93/68/EEC and in accordance with Low Voltage Directive 73/23/EEC
- On/off switch

- Minimum speed adjustment
- With EMC filters in accordance with standard EN-55014

| Model | Input voltage | Protection | Maximum current (A) | Model | A | B | C |

| C2V-CG10 A441 | 20 | 5.5 | 20 |

AR

Soft starters for three-phase motors.

Features:

- Especially designed to reduce the current peak caused during start-up of fans with three-phase motors.
- Supplied voltage 400V + - 10% 50/60Hz
- Mounted in box for DIN-35 rail
- Possibility of adjusting the starting torque, acceleration time and deceleration time.

VSD3/A-RFT VSD1/A-RFM

Variable speed drives for AC motors

Features:

- Converter for varying the speed, via voltage and frequency, of axial and centrifugal fans with asynchronous three-phase motors
- Converter power supply:
 - . Single-phase (VSD1/A-RFM): 200-240V 50/60 Hz
 - . Three-phase (VSD3/A-RFT): 380-480V 50/60 Hz
- Compliant with the Electromagnetic Compatibility Directive 2004/108/EC, the Low Voltage Directive 2006/95/EC and the Safety of Machinery Directive 2006/42/EC.
- Compliant with the following standards: EN 61800-3:2004: Adjustable speed electrical power drive systems. Product standard regarding EMC requirements and specific test methods. EN 61800-5-1:2003: Adjustable speed electrical power drive systems. Safety requirements. Electrical, thermal and energy. EN 60204-1:2006: Safety of Machinery. Electrical Equipment of Machines. General requirements. EN 55011:2007: Industrial, scientific and medical (ISM) radio-frequency Equipment. Electromagnetic disturbance characteristics. Limits and methods of measurement. EN 60529:1992: Specifications for degrees of protection provided by enclosures.
- On/Off input to enable/disable the variable speed drive.
- 0-10V input for speed control.
- Connection available to ModBus RTU bus.
- Standard model with degree of protection IP20. Also available in IP66 version up to 10 HP.

1 In general, all SODECA fans with a three-phase motor under normal operating conditions are suitable for working with power supplied by a static frequency converter (in accordance with IEC 60034-17). Nevertheless, some motors require special measures. The maximum operating frequency or speed must never exceed that for which the fan has been designed. In applications with quadratic torques such as fans and pumps, when the speed varies the absorbed power is directly proportional to the cube of the rotating speed: $P_{a_2} = P_{a_1} (n_2 / n_1)^3$

2 The insulation of motors coupled to fans is sufficient to work without restrictions with a frequency converter up to voltages of < 500 V. The use of sinusoidal filters at the converter output will help the motor to operate properly, reducing breakdowns and increasing the fan's service life. It is recommended that motors of sizes > 225 be ordered with special windings to work with a frequency converter.

3 The length of the wires running from the converter to the fan have a particular influence on voltage characteristics at the motor terminals. The definition of "long wires" will depend on the nominal value and the converter type. The manufacturer's technical documentation must be consulted.

4 Ex-d flame-resistant motors must be ordered for operation using a frequency converter. The motor manufacturer will request information about the application via a questionnaire in order to establish the working parameters. These motors must also be fitted with PTC probes.

5 Ex-e increased safety motors cannot be operated with a frequency converter (a joint motor-converter certification would be required for this).

KME - 10K

External control kit for On/Off and velocity control for VSD1/A-RFM and VSD3/A-RFT frequency converters

Features:

- On/Off by button
- Display by means of LED of the position of On or Off
- Memory of the latest position for speed regulation
- Possibility of installation on the surface or built-in

GMP

Electrical starter panel and protection of fans with three-phase motor. with On/Off buttons

Features:

- On/Off by button
- Incorporates fully-cabled contactor and adjustable thermal relay for protection of the motor
- The Off button is used to reset the thermal relay, in case it should go off due to overload
- For assembly on the surface, IP-55 protection

For fan with three-phase motor 230V

| Model | Intensity regulation (A) | Power motor 3x230V (kW) |
|------------------|--------------------------|-------------------------|
| GMP-0.2-0.33/230 | 1.2-1.8 | 0.25 |
| GMP-02-0.75/230 | 1.8-2.8 | 0.37 / 0.55 |

| GMP-06-25/400 | 25-40 | 18.50 |

GMM

Electrical starter panel and protection from overload and short-circuits of fans with three-phase motor, with rotary controls

Features:

- On/Off by means of a rotary control with the possibility of blocking with three locks
- Incorporates adjustable thermal relay for protection from overload and short-circuit
- For assembly on the surface, IP-55 protection

For fan with three-phase motor 400V

| Model | Intensity regulation (A) | Power motor 3x400V (kW) |
|----------------|--------------------------|-------------------------|
| GMM-01-1/400 | 1.6-2.5 | 0.75 |
| GMM-01-2/400 | 2.5-4 | 1.10 1.50 |
| GMM-01-3/400 | 4-6.3 | 2.20 |
| GMM-01-5.5/400 | 6.3-10 | 3.00 4.00 |
| GMM-01-7.5/400 | 10-16 | 5.50 |
| GMM-01-10/400 | 16-20 | 7.50 |
| GMM-01-15/400 | 20-25 | 11.00 |
| GMM-01-20/400 | 25-32 | 15.00 |

AET

Electrical starter panel, star / triangle and protection of fans with three-phase motor, with On/Off buttons

Features:

- On/Off by button
- Display of condition by means of luminous pilot lights
- Incorporates adjustable thermal relay for protection of the motor
- Fully cabled
- Metal plate for assembly on the surface, IP-65 protection

For fan with three-phase motor 230V/400V. Power supply 3x230V

| Model | Current regulation of thermal relay (A) | Power motor 3x230/400V (kW) |
|----------------|---|-----------------------------|
| AET-01-3/230 | 4-6.3 | 2.2 |

| AET-02-75/400 | 45-65 | 55.0 |

AD Electrical starter panel and protection of fans with three-phase motor, with two DAHLANDER speeds

Features:

- Switch for selecting speed (1-0-2). Low-Off-High
- Display of condition by means of luminous pilot lights
- Incorporates adjustable thermal relay for protection of the motor
- Fully cabled
- Metal plate for assembly on the surface, IP-65 protection

For fan with three-phase 400V Dahlander motor.

PL Plastic backdraught louver.

Features:

- The backdraught louver is adapted directly to the wall where the fan is mounted
- Opening through excess pressure due to airflow
- Closed when the fan is on standby
- Made from plastic
- Maximum recommended speed 12m/sec for models 80, 90 and 100

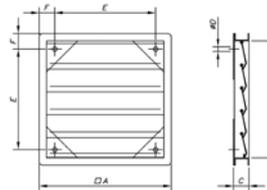

| Model | Measurements | | | | |

P Aluminium backdraught louver

Features:

- The backdraught louver is adapted directly to the wall where the fan is mounted
- Opening through excess pressure due to airflow
- Closed when the fan is on standby
- Aluminium sheet construction
- Maximum recommended speed 18m/sec for models 80, 90 and 100

P-400

Backdraught louver, certified for 400°C/2h.

Features:

- Supplied mounted in the box with appropriate adapter
- Standardisation in accordance with standard EN-12101-3- 2002, certificate no.: 0370-CPR-0312
- Frame made from sheet steel and slats from aluminium sheet
- Can be used for other 400°C/2h applications

MOTORES IE-2 Three-phase asynchronous motors

Features:

- Speeds: 2, 4, 6 and 8 poles
- Three-phase power 230/400V 50Hz up to 5.5CV, and 400/690V 50Hz for greater power
- Form of construction IM B3 (IM 1001)
- Closed motors, with external ventilation (IC 411)
- Degree of protection IP-55
- Class F insulation
- S1 Service

On request:

- Other forms of construction
- Single-phase motors
- Two-speed motors

Regulations:

- They fulfil the following international regulations:

Electric regulations

| | |
|--|----------------|
| General prescriptions on electrical machines | IEC/EN 60034-1 |
| Marking of terminals and direction of rotation | IEC 60034-8 |
| Start up characteristics of three-phase induction motors | IEC 60034-12 |
| Insulating materials | IEC 60085 |
| Standardised voltages | IEC 60038 |

Mechanical regulations

| | |
|---------------------------------|----------------|
| Dimensions and assigned power | IEC 60072 |
| Degrees of protection (Code IP) | IEC/EN 60034-5 |
| Methods of refrigeration | IEC/EN 60034-6 |
| Forms of construction | IEC/EN 60034-7 |
| Noise maximum values | IEC/EN 60034-9 |
| Mechanical vibrations | IEC 60034-14 |

Intelligent sensors for controlling the fans

Sensors which make it possible to sense certain environmental conditions and automatically start up the fans. This makes it possible to use the ventilation only when necessary. Using the sensors with the frequency inverters we can control the regime of operation of the fans, thus preventing the fan always working at its maximum consumption. These systems involve a significant energy saving.

SI-PIR-TF-Cenital

SI-PIR-TF-Mural

SI-PIR

Motion detector

Automatically activates the ventilation system when it detects the presence of people within its radius of action and keeps functioning for a pre-set time, which can be adjusted by means of an internal clock

| Model | Power supply | Output | Detection angle | Ajustments | Height installation | Working temperature |
|------------------|---------------|---------------|-----------------|-------------------|---------------------|---------------------|
| SI-PIR | 230V | 230V | 360°C | Timing 5s-30 min | 2.4-4.2 m | -20° +50° C |
| SI-PIR-TFT-550-B | 24V ac/24V dc | 24V ac/24V dc | 110°C | Timing 5s-30 min | 1.8-3.6 m | -20° +50° C |
| SI-PIR-TF-25-360 | 24V ac/24V dc | 24V ac/24V dc | 360°C | Timing 10s-30 min | 2.4-4.2 m | -20° +50° C |

SI-SMOKE

Tobacco smoke detector

Automatically activates the ventilation system when tobacco smoke and other contaminants exceed the pre-set value in the sensor and keeps functioning for a pre-set time, which can be adjusted by means of an internal clock

| Model | Power supply | Output | Detection angle | Adjustments | Height installation | Working temperature |
|----------|--------------|-------------|-----------------|--------------------|---------------------|---------------------|
| SI-SMOKE | 220-240V ac | 220-240V ac | 3.0 | Timing 3min-20 min | 1.5-2.0 m | -20° +50° C |

SI-CO2

Air quality detector

Automatically activates the ventilation system when the increase in contamination, as a function of the occupation of the premises. exceeds the pre-set value

| Model | Power supply | Output | Consumption (W) | Adjustments | Height installation | Working temperature |
|--------------|--------------|----------|-----------------|-------------------|---------------------|---------------------|
| SI-CO2-GAQ24 | 24V ac | 0-10V ac | 5 | Timing 10s-30 min | 1.5-2.5 m | -20° +50° C |

SI-CO2 IND

CO2 sensor

| Model | Power supply | Output | Maximum consumption (VA) | CO2 concentration range | Working temperature |
|--------------|---------------------------|-----------------|--------------------------|-------------------------|---------------------|
| SI-CO2 IND/P | 15-24V ac ±10 %/18-34V dc | 0-10V dc/0-20mA | 2.5 | 0-2000 ppm | -10 +50 °C |
| SI-CO2 IND/C | 15-24V ac ±10 %/18-34V dc | 0-10V dc/0-20mA | 2.5 | 0-2000 ppm | 0 +50 °C |

SI-TEMP

Temperature sensor

Automatically activates the ventilation system when it detects a temperature greater than the pre-set value. Once the environmental temperature has descended below the pre-set point, the fan remains functioning for a pre-set period, which can be adjusted by means of the internal clock. The range of temperature oscillates between +10°C and 40°C

| Model | Power supply | Output | Maximum current (A) | Adjustments | Height installation | Working temperature |
|---------|--------------|-------------|---------------------|---------------------------|---------------------|---------------------|
| SI-TEMP | 220-240V ac | 220-240V ac | 3.0 | Temporización 3min-20 min | 1.5-2.0 m | +10° +40° C |

SI TEMP IND

Proportional temperature sensor

| Model | Power supply | Output | Maximum consumption (VA) | Working temperature |
|---------------|---------------------------|-----------------|--------------------------|---------------------|
| SI-TEMP IND/P | 15-24V ac ±10 %/18-34V dc | 0-10V dc/0-20mA | 1.5 | 0 +50 °C |

SI-TEMP+HUMEDAD

Temperature and relative humidity sensor with display

Independently controls the temperature and the relative humidity of the air on the premises. Automatically activates the ventilation system when it detects a temperature or humidity greater than the pre-set value. Once the environmental temperature or humidity has descended below the pre-set point, the fan remains functioning for a pre-set period, which can be adjusted by means of the internal clock.

| Model | Power supply | Output | Adjustments | Height installation | Working temperature |
|-----------------|--------------|----------|---|---------------------|---------------------|
| SI-TEMP+HUMEDAD | 24V ac | 0-10V dc | $\Delta T = 0.5^{\circ}C$ y $\Delta HR = 2\%$ | 1.5-2.5 m | +10° +40° C |

SI-HUMIDOSTATO

Humidity sensor

| Model | Power supply | Output | Maximum consumption (VA) | Relative humidity range | Working temperature |
|----------------|---------------------------|-------------|--------------------------|-------------------------|---------------------|
| SI-HUMIDOSTATO | 15-24V ac ±10 %/18-34V dc | 220-240V ac | 2 | 0-100 % RH | 0 +50 °C |

SI-HUMEDAD

Rango Humedad relativa

| Model | Power supply | Output | Maximum consumption (VA) | Relative humidity range | Working temperature |
|------------|---------------------------|-----------------|--------------------------|-------------------------|---------------------|
| SI-HUMEDAD | 15-24V ac ±10 %/18-34V dc | 0-10V dc/0-20mA | 2.5 | 0-100 % RH | 0 +50 °C |

SI-PRESIÓN

Pressure transmitter

Controls the pressure in installations with constant pressure ventilation, and transforms it into an electrical signal to regulate the ventilation system and constantly maintain the same pressure.

| Model | Power supply | Output | Maximum consumption (VA) | Connectors | Pressure range |
|---------------------------|---------------|--------------|--------------------------|------------|----------------|
| SI-PRESIÓN TPDA | 24V ac/24V dc | 0-10V/4-20mA | 4 | 6.2 mm | 0-2500 Pa |
| SI-PRESIÓN TPDA c/DISPLAY | 24V ac/24V dc | 0-10V/4-20mA | 4 | 6.2 mm | 0-2500 Pa |

SI-TIMER

Timer

Adjusts the operating time of the ventilation system to which it is connected. The ventilation system is automatically activated when the light switch goes on and continues to function for a pre-set time which can be altered by means of the internal clock

| Model | Power supply | Output | Maximum current (A) | Adjustments | Working temperature |
|----------|--------------|-------------|---------------------|--------------------|---------------------|
| SI-TIMER | 220-240V ac | 220-240V dc | 3.0 | Timing 3min-20 min | -20° +50° C |

SI-FUENTE DE ALIMENTACIÓN ac

SI-FUENTE DE ALIMENTACIÓN dc

SI-FUENTE DE ALIMENTACIÓN

Power supply 24V dc / ac

Powers the intelligent 24V dc/ac sensors from an input voltage of 230V, single-phase.

| Model | Power supply | Output | Power (VA) |
|------------------------------|--------------|-----------|------------|
| SI-FUENTE DE ALIMENTACIÓN dc | 230 V | 24V dc | 30 |
| SI-FUENTE DE ALIMENTACIÓN ac | 230/400 V | 24/48V ac | 25 |

CENTRAL CO

Monoxide detection centres for ventilation control in car parks

| Model | Application |
|-----------|---------------------------|
| FMC-C-501 | Centre for 1 area |
| FMC-C-502 | Centre for 2 areas |
| FMC-C-503 | Centre for 3 areas |
| FM-M-509 | Module for area extension |
| FM-DP500 | CO wall detector |
| FM-D500 | CO ceiling detector |
| FM-TC500 | Control card per inverter |

THE ErP DIRECTIVE

MORE ECO-EFFICIENT FANS

What does the new "ErP" directive refer to?

The Ecodesign ErP 2009/125/CE Directive is going to encourage the economic and sustainable use of available energy resources. Its principal objectives are to encourage ecological design and to advance the struggle against climate change by means of the reduction of CO₂ emissions into the atmosphere.

Over the next few years, the application of this directive will affect all products which require and consume energy so as to make them more environmentally friendly.

- By the year 2020, the EU intends to fulfil its KYOTO commitment by increasing its consumption of renewable energies as opposed to those of fossil origin by 20%.
- It is necessary to control and improve the quality of electrical devices by improving their performance through new, more efficient designs.

For this reason, specific rules for each product marketed in the EU are being developed: Electric motors, water pumps, industrial and residential fans, transformers, etc... And for this purpose, a series of studies of the different categories of devices ordered by LOTS is being carried out, which is now resulting in the appearance of the first regulations, including those for fans.

How will this ErP Directive affect fans?

The first regulation of the Commission, (EU) 327/2011, which is the fruit of the study for the "LOT 11" category, has already been published. It is going to regulate non-residential fans with electrical power of between 125W and 500kW.

This regulation sets down two phases for its complete implementation:

- 1st phase: Beginning in January 2013, applying a first stage of efficiency for fans.
- 2nd phase: Beginning in January 2015, these requirement levels will be further increased.

These two phases are related with those already applied by Directive 2009/640/EC on the efficiency of standard electric motors which came into effect in June 2011. Since this time, Sodeca has been using IE2 efficiency motors in all its fans.

In the second phase, starting in January 2015, all the electric motors used must satisfy IE3 efficiency. The only alternative is the use of IE2 motors + Inverter, or EC motors.

The efficiency of fans will improve largely through the use of more efficient motors. However, improvements will also be introduced, by using the impellers which are best suited to each case, and through new, more highly optimised designs.

As from each phase, products which do not comply with the stated requirement may not be sold and marketed in the European market.

Are there any exceptions regarding the fans affected?

Yes, at least for the category of fans included in LOT11, and apart from the products which may be regulated in the future in other categories which have not yet been finalised. The current regulations, (EU) 327/2011, corresponding to LOT11 already contemplate exceptions such as:

- ATEX fans for explosive atmospheres.
- Fans which are exclusively for emergency use (400°C/2h, 300°C/1h, etc...)
- Fans which are specifically for working in environments at over 65°C, or for transporting gases at over 100°C.
- Fans specifically for working in environments of gases transported at temperatures of below -40°C.
- Fans with motors at special voltages Vac>1000V or Vdc>1500V.
- Fans for toxic, highly corrosive or inflammable environments.
- Fans used for transporting non-gaseous substances (solids) in industrial processes.

The possibility of being able to market fans which do not fulfil 327/2011 up to 1st January 2015 is also contemplated if they are intended to replace fans that are built into products marketed before 1st January 2013.

And what about products exported to countries outside the EU?

The directive is only required to be fulfilled within the EU.

Must efficient fans be marked?

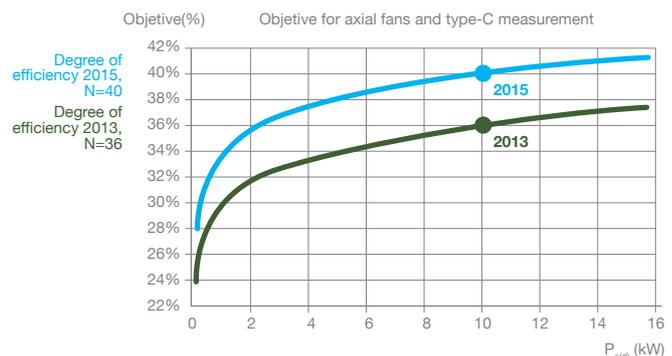

Yes, because otherwise the breach of this directive would prevent CE marking. It should be clearly specified which products fulfil the requirements both in catalogues and in the selection programmes used.

Will these fans be more expensive?

Many of Sodeca's fans already satisfy the requirements of the directive. But in those cases in which the purchase price is significantly higher, the energy saving itself will allow you to recover your investment. And they are clearly much more economical in the long term. Sodeca is incorporating the latest new technology into high-efficiency IE2 and IE3 motors and EC systems with which many other advantages of regulation, communication and interaction with other pieces of equipment are going to be available.

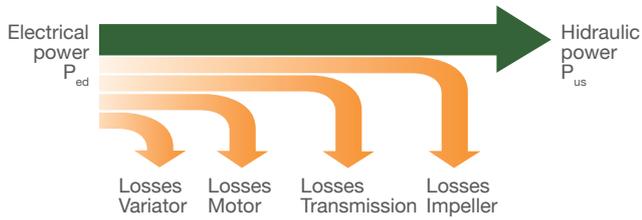

How do you calculate the efficiency objective?

Regulation CE no. 327/2011 sets minimum efficiency requirements in two phases, the first one is applicable in 2013 and the second, more demanding one, in 2015. The efficiency objectives are determined according to the type of fan, the electrical power consumed at the point of maximum efficiency of the fan and the aerodynamic test type used. The degree of efficiency (N) is the value which takes the required efficiency for an input electrical power of 10 kW. N is different according to the type of test used and increases as it passes from the first to the second phase of application. For example, in an axial fan tested with a type C test, the value of N demanded for 2013 is 36% and for 2015 40%, as can be seen in the following graph.

How do you calculate the efficiency of the fan?

The performance of the fan is calculated at the point of optimum efficiency. This must be equal to or greater than the objective required. The method of calculation is different according to the elements which the fan includes and whether it is at final assembly or not.

IF THE FAN IS SUPPLIED COMPLETE

a. If it does not have a speed inverter:

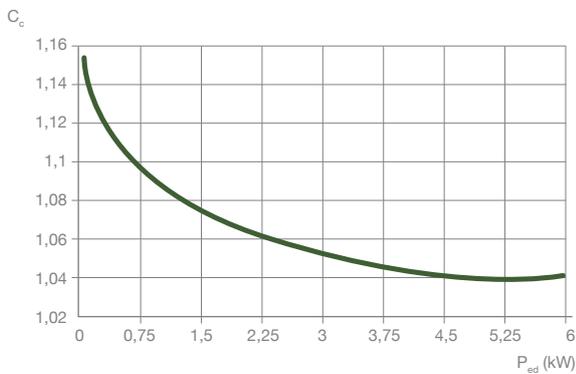

$$\eta_e = \frac{P_{u(s)}}{P_e}$$

b. If it has a speed inverter:

$$\eta_e = \frac{P_{u(s)}}{P_{ed}} \cdot C_c$$

Where, for the point of optimum efficiency:

- η_e is the global efficiency.
- $P_{u(s)}$ is the gas power of the fan.
- P_e is the input electrical power for the supply.
- P_{ed} is the input electrical power for the speed variator supply.
- C_c is the compensation factor of the partial load. For P_{ed} of more than 5 kW it is 1.04. For lower powers than 5 kW the factor is greater. See attached graph.

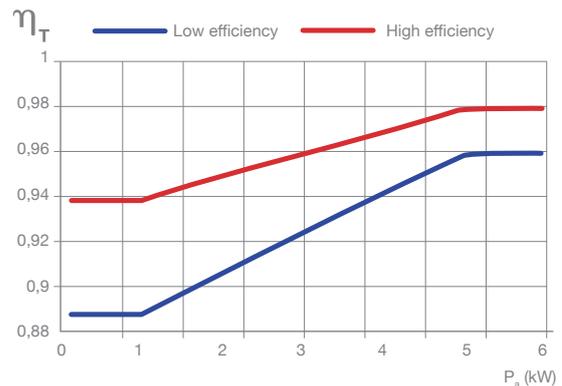

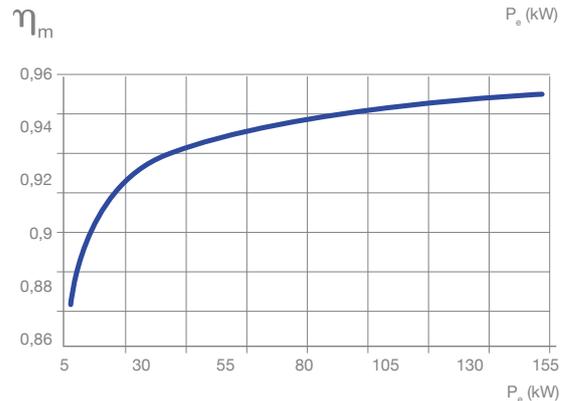

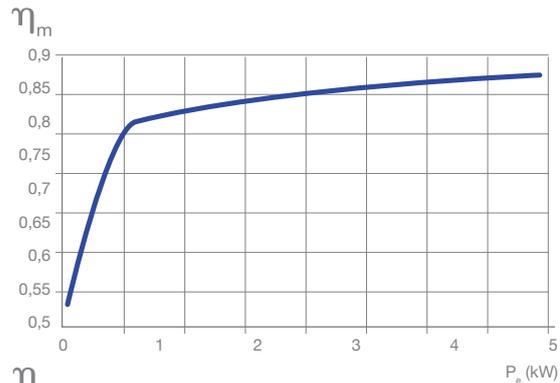

IF THE FAN IS SUPPLIED FOR ASSEMBLY

$$\eta_e = \eta_r \cdot \eta_m \cdot \eta_T \cdot C_m \cdot C_c$$

Where, for the point of optimum efficiency:

$$\eta_r = \frac{P_{u(s)}}{P_a}$$

- η_e is the global efficiency.
- η_r is the efficiency of the turbine, Where $P_{u(s)}$ is the gas power and P_a the mechanical power at the axis of the turbine.
- η_m is the efficiency of the motor. It is necessary to use motors which satisfy Regulation (CE) no. 640/2009 on motor efficiency. If the fan is supplied without motor or this is not covered by the by the motor regulations, it is possible to estimate its performance by calculation, according to the electrical input power recommended (P_e (kW)) for the point of optimum energy efficiency of the fan. In the following graphs, it is possible to observe these values by default.
- η_T is the efficiency of the transmission system. For fans with direct transmission, it is equal to 1. The transmission is considered to be of high efficiency when the width of the belt is equal to or greater than three times its height. Toothed belts and spur gears are also of high efficiency. Their performance can be estimated from the power of the axis of the turbine (P_a (kW)). For values of P_a of less than 1 kW and more than 5 kW, it is considered to be constant. See attached graph.
- C_m is the compensation factor to bear in mind the adaptation of the components. It is 0.9.
- C_c is the compensation factor of the partial load. In the case of there is no speed regulator, it is 1. If there is a variator, it takes the same values as the fan at final assembly.

EFFICIENT WORK FANS

Solution DEvelopment Capacity

Fast and flexible industrial fan solutions and tailored fans

Large experience in smoke control systems and ATEX applications

Wide range of certified products for specific markets

AXIAL AND ROOF FANS

CENTRIFUGAL FANS AND IN-LINE EXTRACTORS

FANS FOR SMOKE EXTRACTION

ATEX FANS FOR EXPLOSIVE ATMOSPHERES AND OTHER APPLICATIONS

HEAT RECOVERY SYSTEMS AND FILTRATION UNITS

AIR CURTAINS FOR COMMERCIAL AND INDUSTRIAL APPLICATIONS

VENTILATION SYSTEMS FOR HOUSES
